Quantum Mechanics D. A. Dubin, Mark A. Hennings, 1990-08-20 These notes present a rigorous mathematical formulation of quantum mechanics based on the algebraic framework of observables and states The underlying mathematics is that of topological algebras locally convex spaces and distribution theory

Common Zeros of Polynomials in Several Variables and Higher Dimensional Quadrature Yuan Xu, 2020-12-17 Presents a systematic study of the common zeros of polynomials in several variables which are related to higher dimensional quadrature The author uses a new approach which is based on the recent development of orthogonal polynomials in several variables and differs significantly from the previous ones based on algebraic ideal theory Featuring a great deal of new work new theorems and in many cases new proofs this self contained work will be of great interest to researchers in numerical analysis the theory of orthogonal polynomials and related subjects

Rings and Radicals R. Wiegandt, J.W. Gardner, Shao-Xue Liu, 1996-04-18 First published in 1996 Routledge is an imprint of Taylor Francis an informa company

Numerical Analysis 1993 D.F. Griffiths, G.A. Watson, 2020-10-07 This volume contains invited papers presented at the 15th Dundee Biennial Conference on Numerical Analysis held at the University of Dundee in June of 1993 The Dundee Conferences are important events in the numerical analysis calendar and the papers published here represent accounts of recent research work by leading numerical analysts covering a wide range of fields of interest The book is a valuable guide to the direction of current research in many areas of numerical analysis It will be of particular interest to graduate students and research workers concerned with the theory and application of numerical methods for solving ordinary and partial differential equations

Harmonic Maps Into Homogeneous Spaces Malcolm Black, 2018-05-04 Harmonic maps and the related theory of minimal surfaces are variational problems of long standing in differential geometry Many important advances have been made in understanding harmonic maps of Riemann surfaces into symmetric spaces In particular twistor methods construct some and in certain cases all such mappings from holomorphic data These notes develop techniques applicable to more general homogeneous manifolds in particular a very general twistor result is proved When applied to flag manifolds this wider viewpoint allows many of the previously unrelated twistor results for symmetric spaces to be brought into a unified framework These methods also enable a classification of harmonic maps into full flag manifolds to be established and new examples are constructed The techniques used are mostly a blend of the theory of compact Lie groups and complex differential geometry This book should be of interest to mathematicians with experience in differential geometry and to theoretical physicists

Boundary-field Equation Methods For a Class of Nonlinear Problems Gabriel N Gatica, George C Hsiao, 1995-09-29 This book is the first to offer a general discussion on the coupling methods for nonlinear problems and provides all material necessary for an introductory course on the subject Readers are assumed to have only a basic knowledge of applied functional analysis and partial differential equations at graduate level This book can be used as an advanced graduate text as well as a reference for

specialists working in the areas of partial differential equations boundary integral equations and scientific computing This book will be of particular interest to students and researchers in applied mathematics numerical analysis and partial differential equations

Localization and Sheaves Jara Pascual, Conchi Vidal, A Verschoren, 1995-11-30 This book completely solves the problem of representing rings and modules over them which are locally noetherian over subsets of their prime spectrum by structure sheaves over this subset In order to realise this one has to develop the necessary localization theory as well as to study local equivalents of familiar concepts like the Artin Rees property Ore sets and the second layer condition The first part of the book is introductory and self contained and might serve as a starting course at graduate level on localization theory within Grothendieck categories The second part is more specialised and provides the basic machinery needed to effectively these structure sheaves as well as to study their functorial behaviour In this way the book should be viewed as a first introduction to what should be called relative noncommutative algebraic geometry

A Method for Computing Unsteady Flows in Porous Media R Raghavan, 2017-11-22 Self contained and concise this Research Note provides a basis to study unsteady flow in saturated porous media It provides for the development of algorithms that examine three dimensional flows subject to complicated boundary conditions that are a natural consequence of flow in geological systems A new way to understand the flow in porous media is presented The authors pay attention to computational considerations and options for developing codes are addressed The note consists of five chapters the first is introductory the second and third are devoted to showing how one arrives at the solutions of interest the fourth chapter presents various reformulations to aid computations and presents a few illustrative examples the fifth chapter is a natural progression of the first four chapters to more complicated visualizations of flow in porous media

Nonlinear Partial Differential Equations A Benkirane, J P Gossez, 1996-04-11 This book presents a collection of selected contributions on recent results in nonlinear partial differential equations from participants to an international conference held in Fes Morocco in 1994 The emphasis is on nonlinear elliptic boundary value problems but there are also papers devoted to related areas such as monotone operator theory calculus of variations Hamiltonian systems and periodic solutions Some of the papers are exhaustive surveys while others contain new results published here for the first time This book will be of particular interest to graduate or postgraduate students as well as to specialists in these areas

Extending Modules Nguyen Viet Dung, 2019-01-22 Module theory is an important tool for many different branches of mathematics as well as being an interesting subject in its own right Within module theory the concept of injective modules is particularly important Extending modules form a natural class of modules which is more general than the class of injective modules but retains many of its

Elliptic Boundary Value Problems with Indefinite Weights, Variational Formulations of the Principal Eigenvalue, and Applications Fethi Belgacem, 1997-05-05 Elliptic Boundary Value Problems With Indefinite Weights presents a unified approach to the methodologies dealing with eigenvalue problems involving indefinite weights The principal eigenvalue for

such problems is characterized for various boundary conditions. Such characterizations are used in particular to formulate criteria for the persistence and extinctions of populations and applications of the formulations obtained can be quite extensive.

The Dirichlet Problem for the Laplacian in Bounded and Unbounded Domains Christian G Simader, H Sohr, 1996-11-07 The Dirichlet problem $u \in C^2(\bar{G})$ for the Laplacian in a domain $G \subset \mathbb{R}^n$ with boundary G is one of the basic problems in the theory of partial differential equations and it plays a fundamental role in mathematical physics and engineering.

Singularities of Solutions of Second-Order Quasilinear Equations Laurent Veron, 1996-08-01 This text examines the singularity problem for solutions of elliptic and parabolic quasilinear equations of second order.

Integral Expansions Related to Mehler-Fock Type Transforms B N Mandal, Nanigopal Mandal, 2020-11-25 An important class of integral expansions generated by Sturm Liouville theory involving spherical harmonics is commonly known as Mehler Fock integral transforms. In this book a number of integral expansions of such type have been established rigorously. As applications integral expansions of some simple function are also obtained.

Progress in Holomorphic Dynamics Hartje Kriete, 1998-05-20 In the last few decades complex dynamical systems have received widespread public attention and emerged as one of the most active fields of mathematical research. Starting where other monographs in the subject end, *Progress in Holomorphic Dynamics* advances the theoretical aspects and recent results in complex dynamical systems with particular emphasis on Siegel discs. Organized into four parts, the papers in this volume grew out of three workshops: two hosted by the Georg August University of Göttingen and one at the Mathematisches Forschungsinstitut Oberwolfach. Part I addresses linearization. The authors review Yoccoz's proof that the Brjuno condition is the optimal condition for linearizability of indifferent fixed points and offer a treatment of Perez-Marco's refinement of Yoccoz's work. Part II discusses the conditions necessary for the boundary of a Siegel disc to contain a critical point, builds upon Herman's work and offers a survey of the state of the art regarding the boundaries of Siegel discs. Part III deals with the topology of Julia sets with Siegel discs and contains a remarkable highlight: C. L. Petersen establishes the existence of Siegel discs of quadratic polynomials with a locally connected boundary. Keller, taking a different approach, explains the relations between locally connected real Julia sets with Siegel discs and the abstract concepts of kneading sequences and itineraries. Part IV closes the volume with four papers that review the different directions of present research in iteration theory. It includes discussions on the relations between commuting rational functions and their Julia sets, interactions between the iteration of polynomials and the iteration theory of entire transcendental functions, a deep analysis of the topology of the limbs of the Mandelbrot set and an overview of complex dynamics in higher dimensions.

Numerical Methods in Mechanics Carlos Conca, Gabriel N Gatica, 1997-07-16 This volume contains the invited papers given at the Fourth French Latin American Congress on Applied Mathematics. New numerical techniques in fluid and solid mechanics were presented.
