Sense And Nonsense Evolutionary Perspectives On Human Behaviour:

Sense and Nonsense Gillian R. Brown, Kevin N. Lala, 2024-10-08 Evolutionary theory is one of the most wide ranging and inspiring scientific ideas and it offers a battery of methods that can be used to interpret human behaviour. However, researchers disagree about the best ways to use evolution to explore humanity and a number of schools of thought have emerged. *Sense and Nonsense* third edition provides an introduction to the ideas, methods and findings of five such schools: namely sociobiology, human behavioural ecology, evolutionary psychology, cultural evolution and gene culture coevolution. In this revised and updated edition of their successful monograph, Brown and Lala provide a balanced and rigorous analysis that scrutinises both the evolutionary arguments and the allegations of the critics, carefully guiding the reader through the mire of confusing terminology, claim and counter claim and polemical statements. This readable and informative introductory book will be of use to undergraduate and postgraduate students for example in psychology, anthropology and zoology as well as experts on one approach who would like to know more about the other perspectives and lay persons interested in evolutionary explanations of human behaviour. Having completed the book, the reader will feel better placed to assess the legitimacy of claims made about human behaviour under the name of evolution and to make judgements as to what is sense and what is nonsense.

Evolutionary Perspectives on Human Development Robert G. Burgess, Kevin MacDonald, 2005 This new edition of *Evolutionary Perspectives on Human Development* is obligatory reading for anyone interested in the integration of evolutionary theory into developmental psychology. It provides a valuable corrective to recent narrow approaches which argue that the human mind is constructed exclusively of domain specific mechanisms and which deemphasize the importance of human psychological and behavioral plasticity. Anyone who reads this book will come away with a richer understanding of our shared human nature. Bill Irons, Northwestern University. In this volume, Burgess and MacDonald have brought together a distinguished group of psychologists and anthropologists to investigate how given our evolutionary heritage, genetic make up and salient environment, behavior, cognition and emotion unfold from the human organism. They make clear that both evolutionary functional and proximate behavioral perspectives are essential to understanding the human mind and its products. Many of these essays should be required reading for sociobiologists, evolutionary psychologists and evolutionary anthropologists and their ilk. Jeffrey Kurland, Penn State. It is clear that evolutionary biology has a tremendous amount to offer when it comes to our understanding of human development and yet many experts in developmental psychology have remained impervious to these insights. At last, this may change. Burgess and MacDonald have compiled a rich array of theory and data, much of it contributed by the leading lights of evolutionary psychology or, if you prefer, sociobiology. A very valuable collection and one that might help define a new and important field.

David P. Barash, University of Washington. *Evolutionary Perspectives on Human Development* Second Edition considers the role of evolutionary theory in the field of developmental psychology to examine key topics of individual human development.

This unique book fills an important gap in the literature applying evolutionary models to human development by focusing on central development issues. The book emphasizes both domain general evolved psychological mechanisms and domain specific processes. The text also integrates behavior genetic research with evolutionary and developmental principles. In this contributed volume, editors Robert L. Burgess and Kevin MacDonald have brought together a distinguished group of social and behavioral scientists employing multiple levels of analysis drawn from a variety of academic disciplines. This diverse group of contributors illustrates the enormous power of evolutionary theory by elucidating human behavior and its development and the various ways it is manifested in different environments. *Evolutionary Perspectives on Human Development* applies evolutionary theory to such topics as parent-child relationships, the maltreatment of children, psychopathology, cooperation and competition among siblings, and the acquisition of vital resources in different cultural settings from an evolutionary point of view. Key Features: Comprehensive coverage of the impact of evolutionary theory on human development provides students with the most thorough foundation available in this area. Contributions by leading scholars and researchers expose readers to the exciting research and developments that have been occurring in the field. An introductory chapter written by the volume editors provides an accessible overview of the book. *Evolutionary Perspectives on Human Development* provides state-of-the-art groundwork in evolutionary theory as viewed by leading thinkers in the field. It is an excellent supplementary textbook for advanced undergraduate and graduate courses in evolutionary and developmental psychology.

Rethinking Evolutionary Psychology A. Goldfinch, 2015-02-24 *Rethinking Evolutionary Psychology* identifies champions and vindicates a streamlined evolutionary psychology. It offers a new way of thinking that moves decisively away from theoretical and critical excess. Where standard accounts often obscure and distort, this book emphasizes and develops evolutionary psychology's heuristic credentials.

each other especially during childhood Theology and Science on the Evolution of Religion Tom Uytterhoeven, 2024-09-14 This book studies the much debated implications of sociobiology for religion It explores the answers to questions such as Is religion merely the result of natural selection Do religious ideas literally make up people s minds determining how they think and act Critically engaging philosopher Daniel Dennett s view on cultural evolution the book argues that the relation between religious concepts and religious believers is one of continuous creative dialogue This dialogical relation allows meaning to emerge and leaves room for free will thus contradicting Dennett s position The book provides a concise introduction to the questions at play where religion and science meet Drawing on sources from science philosophy and theology it offers an example of how a constructive interaction of different disciplines can lead to new perspectives on the complex phenomenon of religion The Ape that Understood the Universe Steve Stewart-Williams, 2019-11-21 The Ape that Understood the

Universe is the story of the strangest animal in the world the human animal It opens with a question How would an alien scientist view our species What would it make of our sex differences our sexual behavior our altruistic tendencies and our culture The book tackles these issues by drawing on two major schools of thought evolutionary psychology and cultural evolutionary theory The guiding assumption is that humans are animals and that like all animals we evolved to pass on our genes At some point however we also evolved the capacity for culture and from that moment culture began evolving in its own right This transformed us from a mere ape into an ape capable of reshaping the planet travelling to other worlds and understanding the vast universe of which we re but a tiny fleeting fragment Featuring a new foreword by Michael Shermer

Disbelief Will M. Gervais, 2024-07-30 Does God exist This straightforward question has spawned endless debate ranging from apologists supposed proofs of God s existence to New Atheist manifestos declaring belief in God a harmful delusion In Disbelief Will M Gervais Phd a global leader in the psychological study of atheism shows that the ubiquity of religious belief and the peculiarities of atheism are connected pieces in the puzzle of human nature It s undeniable that religion is a core tenet of human nature It is also true that our overwhelmingly religious species is also as atheistic as it s ever been Yet no scientific understanding of religion is complete without accounting for those who actively do not believe In this refreshing and revelatory book Gervais argues that religion is not an evolutionary puzzle so much as two evolutionary puzzles that can only be solved together First is the Puzzle of Faith the puzzle of how Homo sapiens and Homo sapiens alone came to be a religious species Second is the Puzzle of Atheism how disbelief in gods can exist within our uniquely religious species The result is a radically cohesive theory of both faith and atheism showing how we became a uniquely religious species and why many are now abandoning their belief Through a firsthand account of breakthroughs in the scientific study of atheism including key findings from cognitive science cultural evolution and evolutionary psychology Disbelief forces a rethinking of the prevailing theories of religion and reminds both believers and atheists of the shared psychologies that set them on their distinct religious trajectories In casual prose and with compelling examples Gervais explains how we became religious why

we're leaving faith behind and how we can get along with others across the religious divides we've culturally evolved

Contemporary Evolutionary Theories of Culture and the Study of Religion Radek Kundt, 2015-11-19 Radek Kundt compares the notion of evolution in cultural evolutionary theories with neo Darwinian evolutionary theory to determine the value of the biological concept for studying culture Contemporary Evolutionary Theories of Culture and the Study of Religion surveys the historical background of cultural evolution as used in the study of religion pinpointing major objections to classical nineteenth century theories Radek Kundt argues that contemporary theories of cultural evolution do not repeat the same mistakes but that when they are

evaluated in terms of fitting the core requirements of neo Darwinian natural selection it is clear that they are not legitimate extensions of neo Darwinian theory Rather they are poor metaphors and misleading analogies which add little to conventional cause and effect historiographical work This book also introduces an alternative evolutionary approach to the study of culture which does not claim that the principles of neo Darwinian evolution should be applicable outside the biological domain Radek Kundt shows that this alternative evolutionary approach nevertheless provides a deeply enriching line of enquiry that incorporates both biological evolutionary history as shaping cultural change and culture as a force acting on the gene

Naturalism, Theism and the Cognitive Study of Religion Aku Visala,2016-04-22 This book provides a critical philosophical analysis of the claim that contemporary cognitive approaches to religion undermine theistic beliefs Recent scientific work into the evolution and cognition of religion has been driven by and interpreted in terms of a certain kind of philosophical and methodological naturalism The book argues that such naturalism is not necessary for the cognitive study of religion and develops an alternative philosophical and methodological framework This alternative framework opens the cognitive study of religion to theological and philosophical considerations and clarifies its relationship to other approaches to religious phenomena This unique contribution to discussions regarding the philosophical and theological implications of the cognitive study of religion summarizes the so far fragmentary discussion exposes its underlying assumptions and develops a novel framework for further discussion
