Sensor Array Signal Processing:

Sensor Array Signal Processing Prabhakar S. Naidu, 2009-06-08 Since publication of the first edition of Sensor Array Signal Processing in 2000 the field it heralded has come of age Sensor arrays helped usher in the age of wireless communication by meeting the increasing capacity requirements of ever growing wireless networks but that is only one example of the number of uses served by this valuable technology

Array Signal Processing S. Unnikrishna Pillai, 2012-12-06 This book is intended as an introduction to array signal processing where the principal objectives are to make use of the available multiple sensor information in an efficient manner to detect and possibly estimate the signals and their parameters present in the scene The advantages of using an array in place of a single receiver have extended its applicability into many fields including radar sonar communications astronomy seismology and ultrasonics The primary emphasis here is to focus on the detection problem and the estimation problem from a signal processing viewpoint Most of the contents are derived from readily available sources in the literature although a certain amount of original material has been included This book can be used both as a graduate textbook and as a reference book for engineers and researchers The material presented here can be readily understood by readers having a background in basic probability theory and stochastic processes A preliminary course in detection and estimation theory though not essential may make the reading easy In fact this book can be used in a one semester course following probability theory and stochastic processes

Statistical Nested Sensor Array Signal Processing Keyong Han, 2015 Source number detection and direction of arrival DOA estimation are two major applications of sensor arrays Both applications are often confined to the use of uniform linear arrays ULAs which is expensive and difficult to yield wide aperture Besides a ULA with N scalar sensors can resolve at most $N - 1$ sources On the other hand a systematic approach was recently proposed to achieve $O(N^2)$ degrees of freedom DOFs using $O(N)$ sensors based on a nested array which is obtained by combining two or more ULAs with successively increased spacing This dissertation will focus on a fundamental study of statistical signal processing of nested arrays Five important topics are discussed extending the existing nested array strategies to more practical scenarios Novel signal models and algorithms are proposed First based on the linear nested array we consider the problem for wideband Gaussian sources To employ the nested array to the wideband case we propose effective strategies to apply nested array processing to each frequency component and combine all the spectral information of various frequencies to conduct the detection and estimation We then consider the practical scenario with distributed sources which considers the spreading phenomenon of sources Next we investigate the self calibration problem for perturbed nested arrays for which existing works require certain modeling assumptions for example an exactly known array geometry including the sensor gain and phase We propose

corresponding robust algorithms to estimate both the model errors and the DOAs. The partial Toeplitz structure of the covariance matrix is employed to estimate the gain errors and the sparse total least squares is used to deal with the phase error issue. We further propose a new class of nested vector sensor arrays which is capable of significantly increasing the DOFs. This is not a simple extension of the nested scalar sensor array. Both the signal model and the signal processing strategies are developed in the multidimensional sense. Based on the analytical results we consider two main applications: electromagnetic (EM) vector sensors and acoustic vector sensors. Last but not least, in order to make full use of the available limited valuable data, we propose a novel strategy which is inspired by the jackknifing resampling method. Exploiting numerous iterations of subsets of the whole data set, this strategy greatly improves the results of the existing source number detection and DOA estimation methods.

Sensors arrays are used in diverse applications across a broad range of disciplines. Regardless of the application, however, the tools of sensor array signal processing remain the same. Furthermore, whether your interest is in acoustic, seismic, mechanical or electromagnetic wavefields, they all have a common mathematical framework. Mastering this framework and those tools lays a strong foundation for more specialized study and research. **Sensor Array Signal Processing** helps build that foundation. It unravels the underlying principles of the subject without reference to any particular application. Instead, the author focuses on the common threads that exist in wavefield analysis. After introducing the basic equations governing different wavefields, the treatment includes topics from simple beamforming, spatial filtering and high resolution DOA estimation to imaging and reflector mapping. It studies different types of sensor configurations but focuses on the uniform linear and circular arrays, the most useful configurations for understanding array systems in practice. Unique in its approach, depth and quantitative focus, **Sensor Array Signal Processing** offers the ideal starting point and an outstanding reference for those working or interested in medical imaging, astronomy, radar, communications, sonar, seismology, any field that studies propagating wavefields. Its clear exposition, numerical examples, exercises and wide applicability impart a broad picture of array signal processing unmatched by any other text on the market.

In the past few years, we have written and edited several books in the area of acoustic and speech signal processing. The reason behind this endeavor is that there were almost no books available in the literature when we first started, while there was and still is a real need to publish manuscripts summarizing the most useful ideas, concepts, results and state of the art algorithms in this important area of research. According to all the feedback we have received so far, we can say that we were right in doing this. Recently, several other researchers have followed us in this journey and have published interesting books with their own visions and perspectives. The idea of writing a book on **Microphone Array Signal Processing** comes from discussions we have had with many

colleagues and friends As a c sequence of these discussions we came up with the conclusion that again there is an urgent need for a monograph that carefully explains the theory and implementation of microphone arrays While there are many manuscripts on antenna arrays from a narrowband perspective narrowband signals and narrowband processing the literature is quite scarce when it comes to s sor arrays explained from a truly broadband perspective Many algorithms for speech applications were simply borrowed from narrowband antenna rays However a direct application of narrowband ideas to broadband speech processing may not be necessarily appropriate and can lead to many m understandings **Distributed**

Sensor Arrays Prabhakar S. Naidu, 2017-09-22 Localization of transmitters and receiving sensors is achieved by measuring radiation emitted by a source to a set of sensors which are either on a definite pattern known as an array or one randomly located at irregular points known as a distributed sensor array This book discusses how to determine the position of sensors and transmit information to a central node also known as the anchor node Time of arrival time difference of arrival frequency time of arrival and strength of received signal are also covered The reader will learn effective algorithms and implementation as well as numerical examples with the inclusion of lab experiments It discusses time synchronization including the rotating laser beam to measure distance in detail Proceedings of the 2000 IEEE Sensor Array and Multichannel Signal Processing Workshop IEEE Signal Processing Society, 2000 This work contains the proceedings of the Sensor Array and Multichannel Workshop held in the year 2000 It should be useful to researchers professors practitioners students and professionals
