Sensory Processing In Aquatic Environments:

Sensory Processing in Aquatic Environments Shaun P. Collin, N. Justin Marshall, 2008-04-08 Research on sensory processing or the way animals see hear smell taste feel and electrically and magnetically sense their environment has advanced a great deal over the last fifteen years This book discusses the most important themes that have emerged from recent research and provides a summary of likely future directions. The book starts with two sections on the detection of sensory signals over long and short ranges by aquatic animals covering the topics of navigation communication and finding food and other localized sources The next section the co evolution of signal and sense deals with how animals decide whether the source is prey predator or mate by utilizing receptors that have evolved to take full advantage of the acoustical properties of the signal Organisms living in the deep sea environment have also received a lot of recent attention so the next section deals with visual adaptations to limited light environments where sunlight is replaced by bioluminescence and the visual system has undergone changes to optimize light capture and sensitivity. The last section on central co-ordination of sensory systems covers how signals are processed and filtered for use by the animal This book will be essential reading for all researchers and graduate students interested in sensory systems Physiology of Elasmobranch Fishes: Structure and Interaction with Environment Robert E. Shadwick, Anthony Peter Farrell, Colin Brauner, 2015-11-16 Fish Physiology Physiology of Elasmobranch Fishes Volume 34A is a useful reference for fish physiologists biologists ecologists and conservation biologists Following an increase in research on elasmobranchs due to the plight of sharks in today s oceans this volume compares elasmobranchs to other groups of fish highlights areas of interest for future research and offers perspective on future problems Covering measurements and lab and field based studies of large pelagic sharks this volume is a natural addition to the renowned Fish Physiology series Provides needed comprehensive content on the physiology of elasmobranchs Offers a systems approach between structure and interaction with the environment and internal physiology Contains contributions by leading experts in their respective fields under the guidance of internationally recognized and highly respected editors Highlights areas of interest for future research including perspective on future problems Fish Physiology: Sensory Systems Neuroscience Toshiaki J. Hara, Barbara Zielinski, 2006-10-17 Fish sensory systems have been extensively studied not only because of a wide general interest in the behavioral and sensory physiology of this group but also because fishes are well suited as biological models for studies of sensory systems Fish Physiology Sensory Systems Neuroscience describes how fish are able to perceive their physical and biological surroundings and highlights some of the exciting developments in molecular biology of fish sensory systems Volume 25 in the Fish Physiology series offers the only updated thorough examination of fish sensory systems at the molecular cellular and systems levels Offers a comprehensive account of the present state of science in this rapidly expanding and developing field New physiological techniques presented to enable examining responses at the cellular and system levels Discusses fish sensory systems and how they have adapted to

They exhibit an array of behavioural and reproductive systems Interesting in their own right this suite of adaptive physiologies provides many model systems for both comparative vertebrate and human physiologists This four volume encyclopedia covers the diversity of fish physiology in over 300 articles and provides entry level information for students and summary overviews for researchers alike Broadly organised into four themes articles cover Functional Thematic and Phylogenetic Physiology and Fish Genomics Functional articles address the traditional aspects of fish physiology that are common to all areas of vertebrate physiology including Reproduction Respiration Neural Sensory Central Effector Endocrinology Renal Cardiovascular Acid base Balance Osmoregulation Ionoregulation Digestion Metabolism Locomotion and so on Thematic Physiology articles are carefully selected and fewer in number They provide a level of integration that goes beyond the coverage in the Functional Physiology topics and include discussions of Toxicology Air breathing Migrations Temperature Endothermy etc Phylogenetic Physiology articles bring together information that bridges the physiology of certain groupings of fishes where the knowledge base has a sufficient depth and breadth and include articles on Ancient Fishes Tunas Sharks etc Genomics articles describe the underlying genetic component of fish physiology and high light their suitability and use as model organisms for the study of disease stress and physiological adaptations and reactions to external conditions Winner of a 2011 PROSE Award Honorable Mention for Multivolume Science Reference from the Association of American Publishers The definitive encyclopedia for the field of fish physiology Three volumes which comprehensively cover the entire field in over 300 entries written by experts Detailed coverage of basic functional physiology of fishes physiological themes in fish biology and comparative physiology amongst taxonomic Groups Describes the genomic bases of fish physiology and biology and the use of fish as model organisms in human physiological research Includes a glossary of terms **Dynamic Perception** Uwe J. Ilq, Heinrich H.

Bülthoff, Hanspeter A. Mallot, 2004 This volume contains the proceedings of the 5th workshop on Dynamic Perception which was held on November 18 19 2004 at the Max Planck Institute for Biological Cybernetics in T bingen As in the previous meetings the conference is characterised by its high degree of in terdisciplinarity. The presentations cover the fields of computer science psychology neuroscience as well as biology The common denominator of all contributions consists in the observation that the sensory systems of man animals and robots have to solve similar tasks such as goal directed behaviour orientation within a 3D world or object identification to name just a few Invertebrate Vision Eric Warrant, Dan-Eric Nilsson, 2006-10-05 Publisher description Effects of Anthropogenic Noise on Animals Hans Slabbekoorn, Robert J. Dooling, Arthur N. Popper, Richard R. Fay, 2018-08-20 Over the past several years many investigators interested in the effects of man made sounds on animals have come to realize that there is much to gain from studying the broader literature on hearing sound and the effects of sound as well as data from the effects on humans It has also become clear that knowledge of the effects of sound on one group of animals e g birds or frogs can guide studies on other groups e g marine mammals or fishes and that a review of all such studies together would be very useful to get a better understanding of the general principles and underlying cochlear and cognitive mechanisms that explain damage disturbance and deterrence across taxa The purpose of this volume then is to provide a comprehensive review of the effects of man made sounds on animals with the goal of fulfilling two major needs First it was thought to be important to bring together data on sound and bioacoustics that have implications across all taxa including humans so that such information is generally available to the community of scholars interested in the effects of sound This is done in Chaps 2 5 Second in Chaps 6 10 the volume brings together what is known about the effects of sound on diverse vertebrate taxa so that investigators with interests in specific groups can learn from the data and experimental approaches from other species Put another way having an overview of the similarities and discrepancies among various animal groups and insight into the how and why will benefit the overall conceptual understanding applications in society and all future research Chemical Ecology in Aquatic Systems Christer Brönmark, Lars-Anders Hansson, 2012-03 However our knowledge of this chemical network is still negligible Eel Physiology Francesca Trischitta, Yoshio Takei, Philippe Sébert, 2016-04-19 Eel of the genus Anguilla is an extraordinary fish which due to its particular life cycle has fascinated biologists and physiologists ever since the pioneering works of Homer H Schmidt in the 1930s The Eel has become an excellent model for various aspects of adaptive physiological research Despite that several books dealing with eel biology a Ecological Connectivity among Tropical Coastal Ecosystems Ivan Nagelkerken, 2009-09-23 Mangrove forests seagrass beds and coral reefs are circumtropical ecosystems that are highly productive and provide many important biological functions and economic services These ecosystems cover large surface areas in the shallow tropical coastal seascape but have suffered from serious human degradation especially in the last few decades Part of their diversity productivity and functioning seems to be based on their juxtaposition Especially in the last

decade significant advances have been made on new insights into their ecological connectivity. This authoritative book provides a first time comprehensive review of the major ecological interactions across tropical marine ecosystems that result from the mutual exchange of nutrients organic matter fish and crustaceans A group of leading authors from around the world reviews the patterns and underlying mechanisms of important biogeochemical and biological linkages among tropical coastal ecosystems in 15 chapters Included are chapters that review cutting edge tools to study and quantify these linkages the importance of such linkages for fisheries and how tropical ecosystems should be conserved and managed for sustainable use by future generations. The book uses examples from all over the world and provides an up to date review of the latest published literature This book is a must read for professionals working on the conservation management and ecology of mangrove seagrass and coral reef ecosystems Fish Hearing and Bioacoustics Joseph A. Sisneros, 2015-10-29 Fish Hearing and Bioacoustics is an anthology of review papers that were presented at a special symposium to honor Arthur Popper and Richard Fay on May 25th 2013 at the Mote Marine Laboratory in Sarasota FL The research presentations at this conference spanned the range of disciplines covered by Fay and Popper during their long and productive careers The book includes the following thematic areas for the papers in this special volume morphology and anatomy of the inner ear and lateral line systems physiology of inner ear lateral line and central auditory systems acoustically mediated behavior including communication and sound localization and environmental influences on fish hearing and bioacoustics including anthropogenic effects of noise on fishes Each chapter reviews and summarizes the past studies of particular area that will lead the reader up to the current work presented at the symposium In addition each chapters includes a perspective of how Arthur Popper and Richard Fay have influenced their particular area of fish bio acoustic research Each manuscript also includes a hypotheses for future studies These hypotheses will provide a springboard for future work in each field

Ecology of Australian Freshwater Fishes Paul Humphries, Keith Walker, 2013-04-10 This edited volume reviews our past and present understanding of the ecology of Australian freshwater fishes It compares patterns and processes in Australia with those on other continents discusses the local relevance of ecological models from the northern hemisphere and considers how best to manage our species and their habitats in the face of current and future threats In view of these challenges the need for redress is urgent The chapters are written by some of our foremost researchers and managers developing themes that underpin our knowledge of the ecology conservation and management of fish and fish habitats For each theme the authors formulate a synthesis of what is known consider the need for new perspectives and identify gaps and opportunities for research monitoring and management The themes have an Australian context but draw upon ideas and principles developed by fish biologists in other parts of the world The science of freshwater fish ecology in Australia has grown rapidly from its roots in natural history and taxonomy This book offers an introduction for students researchers and managers one that the authors hope will carry Australian fish biology and resource management to new levels of

Electroreception Theodore Holmes Bullock, Carl D. Hopkins, Richard R. Fay, 2006-09-28 Electroreception has become one of the most revealing areas in the study of the neural basis of behavior and neurobiologists recognize it as a model sensory system for experimental study Through studies of electroreception researchers have gained extensive knowledge about a complete sensory system from molecular biology to computation communication and behavior The book Electroreception will examine the behavior structure and function of the electrosensory systems of fish and other vertebrates As a comprehensive volume on the subject the book will serve as both an introduction to the study of electroreception and a reference and review volume for researchers in related fields
