Sentence Comprehension:

Sentence Comprehension David J. Townsend, Thomas G. Bever, 2001 Using sentence comprehension as a case study for all of cognitive science David Townsend and Thomas Bever offer an integration of two major approaches the symbolic computational and the associative connectionist The symbolic computational approach emphasizes the formal manipulation of symbols that underlies creative aspects of language behavior The associative connectionist approach captures the intuition that most behaviors consist of accumulated habits The authors argue that the sentence is the natural level at which associative and symbolic information merge during comprehension The authors develop and support an analysis by synthesis model that integrates associative and symbolic information in sentence comprehension This integration resolves problems each approach faces when considered independently The authors review classic and contemporary symbolic and associative theories of sentence comprehension and show how recent developments in syntactic theory fit well with the integrated analysis by synthesis model They offer analytic experimental and neurological evidence for their model and discuss its implications for broader issues in cognitive science including the logical necessity of an integration of symbolic and connectionist approaches in the field

Human Language and Our Reptilian Brain Philip Lieberman, 2009-07-01 This book is an entry into the fierce current debate among psycholinguists neuroscientists and evolutionary theorists about the nature and origins of human language A prominent neuroscientist here takes up the Darwinian case using data seldom considered by psycholinguists and neurolinguists to argue that human language though more sophisticated than all other forms of animal communication is not

a qualitatively different ability from all forms of animal communication does not require a quantum evolutionary leap to explain it and is not unified in a single language instinct Using clinical evidence from speech impaired patients functional neuroimaging and evolutionary biology to make his case Philip Lieberman contends that human language is not a single separate module but a functional neurological system made up of many separate abilities Language remains as it began Lieberman argues a device for coping with the world But in a blow to human narcissism he makes the case that this most remarkable human ability is a by product of our remote reptilian ancestors abilities to dodge hazards seize opportunities and live to see another day
