Office of Education,1963 Language Learning Christine Howe,1993 An in depth study of the credibility of the notion that children cannot learn their native language without innate knowledge of its grammatical structure It aspires to a serious challenge to the innateness hypothesis **A Reference List of Audiovisual Materials Produced by the United States Government**, 1978 National Audiovisual Center,1978 Predicative Possession Leon Stassen,2009-05-07 This is the first comprehensive treatment of the strategies employed in

the world's languages to express predicative possession as in the boy has a bat. It presents the results of the author's fifteen-year research project on the subject. Predicative possession is the source of many grammaticalization paths as in the English perfect tense formed from *to have* and its typology is an important key to understanding the structural variety of the world's languages and how they change. Drawing on data from some 400 languages representing all the world's language families, most of which lack a close equivalent to the verb *to have*, Professor Stassen aims a) to establish a typology of four basic types of predicative possession, b) to discover and describe the processes by which standard constructions can be modified, and c) to explore links between the typology of predicative possession and other typologies in order to reveal patterns of interdependence. He shows, for example, that the parameter of simultaneous sequencing the way a language formally encodes a sequence like *John sang and Mary danced* correlates with the way it encodes predicative possession. By means of this and other links, the author sets up a single universal model in order to account for all morphosyntactic variation in predicative possession found in the languages of the world, including patterns of variation over time. Predicative Possession will interest scholars and advanced students of language typology, diachronic linguistics, morphology, and syntax.

Child Psychology in Retrospect and Prospect Willard W. Hartup, Richard A. Weinberg, 2014-02-25. This 32nd volume of the Minnesota Symposium on Child Psychology celebrates the 75th anniversary of the University of Minnesota's Institute of Child Development. All eight essays are devoted to developmental science: its history and current status. Taken together, the chapters in this book show how the history of science connects past and future, how it gives the individual investigator an identity and sense of purpose, how contemporary studies occur within larger traditions, and how institutions like the Institute of Child Development constitute cultural traditions of their own. Collectively, these essays show that the past explains a great deal whether we want to know about the processes through which the child acquires symbolic thought or whether we want to know how and why, during the last century, a few enduring centers were established for the scientific study of children and adolescents. Reading these essays, one obtains a sense of how the past becomes evidence, how it forms models for the way we think, and how intellectual challenges arise.
