Skillman, **Radar Calculations Using Personal Computers** William A. Skillman, Radar Calculations Using the TI-59 Programmable Calculator William A. Skillman, 1983 Radar Calculations Using Personal Computers William A. Skillman, 1984 Modern Radar Systems Hamish Meikle, 2008 This revised and updated edition to the popular Artech House book *Modern Radar Systems* offers complete and current coverage of the subject including new material on accuracy resolution and convolution and correlation The book features more than 540 illustrations drawn in Maple V that offer a greater understanding of various waveforms and other two and three dimensional functions to help you more accurately analyze radar system performance The effects of pulse shaping on transmitter stability and spectra are discussed a topic which is becoming more and more important in the age of electromagnetic compatibility The book addresses the importance of low attenuation and reflection between the main radio frequency blocks including the use of oversized waveguides for long runs **A New Twist to Fourier Transforms** Hamish D. Meikle, 2008-06-25 Making use of the inherent helix in the Fourier transform expression this book illustrates both Fourier transforms and their properties in the round The author draws on elementary complex algebra to manipulate the transforms presenting the ideas in such a way as to avoid pages of complicated mathematics Similarly abbreviations are not used throughout and the language is kept deliberately clear so that the result is a text that is accessible to a much wider readership The treatment is extended with the use of sampled data to finite and discrete transforms the fast Fourier transform or FFT being a special case of a discrete transform The application of Fourier transforms in statistics is illustrated for the first time using the examples operational research and later radar detection In addition a whole chapter on tapering or weighting functions is added for reference The whole is rounded off by a glossary and examples of diagrams in three dimensions made possible by today s mathematics programs *Phase Noise Analysis in Radar Systems Using Personal Computers* Stanley J. Goldman, 1989-05-12 A reference source for phase noise effects on systems and components Analyzes the effects of phase noise on a radar system s performance and on its major subsystems Sequence of chapters follows the path of phase noise in a radar system from its generation through its transmission reception and processing to its final displayed level Discusses major radar design areas pertaining to the analysis of phase noise effects on system performance Includes solved practical problems and computer programs Radar Evaluation Handbook David Knox Barton, Charles Emerson Cook, Paul Charles Hamilton, ANRO Engineering, Inc, 1991 This book describes the steps involved in the evaluation of radar design and performance without complicated math Easily understood by both engineers and non technical personnel it contains a comprehensive discussion of the complex factors involved in the radar design process Radar Cross Section Eugene F. Knott, John F. Shaeffer, Michael T. Tuley, 1985 The leading text and reference on radar cross section RCS theory

and applications this work presents a comparison of two radar signal strengths One is the strength of the radar beam sweeping over a target the other is the strength of the reflected echo sensed by the receiver This book shows how the RCS gauge can be predicted for theoretical objects
