New York, New York, November 11, 1948. Chester R. Longwell, Chairman. Containing Papers by R.C. Moore (And
Others) and Discussion by 16 Authors** Geological Society of America, Raymond Cecil Moore, 1949 **Carbonate Facies
in Geologic History** J.L. Wilson, 2012-12-06 Since 1950 geologists have learned more about the origin and lithification of
carbonate sediments than in all the previous years of the history of science This is true in all the diverse fields of carbonate
geology the study of Recent environments marine zoology and botany organic geochemistry trace element and isotope
geochemistry mineralogy microfacies of depositional environments and trace fossil and sedimentary structure investigation A
synthesis of this new knowledge is just beginning to be formulated The purpose of this volume is to introduce the advanced
student and petroleum explorationist principally to one important aspect of this study to some of the principles of carbonate
geology which may serve to interpret the depositional environments of ancient strata and to better define their sequences
and patterns Chapter I is a brief review of principles of carbonate sedimentation For a full discussion of the mineralogy
geochemistry and diagenesis of carbonates along with a review of Holocene sediments one may refer to Bathurst s 1971 and
Milliman s 1974 texts Chapter II reviews stratigraphic and paleotectonic concepts and discusses a general model for
carbonate deposition Chapter III offers an outline of carbonate petrography concentrating on lithologic descrip tion for the
purposes of environmental interpretation For a further review of this subject and excellent photomicrographs Horowitz and
Potter 1971 and Majewske 1969 may be used **Application of Modern Stratigraphic Techniques** Kenneth
Ratcliffe, Brian A. Zaitlin, 2010 Much has been written and debated about the various methodologies applied to modern
stratigraphic analysis and the ever increasing complexity of terminologies However there exist numerous stratigraphic
techniques that are reliant upon precise quantitative reproducible data rather than qualitative interpretive stratigraphic
methodologies Such stratigraphic techniques are applied in an entirely pragmatic non biased manner within the petroleum

industry to provide enhanced stratigraphic understanding of petroleum systems The petroleum industry is a key driver behind the development of new stratigraphic techniques and a major provider of new stratigraphic data which has resulted in several of these new techniques having been developed as a requirement to the industry Furthermore because techniques such as isotope chemostratigraphy elemental chemostratigraphy magnetic susceptibility stratigraphy numerical biostratigraphy and heavy mineral stratigraphy are based around precise quantified and reproducible analytical data they provide an independent means to test the more interpretive stratigraphic methodologies This volume attempts an overview of stratigraphic methodologies but largely focuses on data generative stratigraphic techniques such as chemostratigraphy magnetic susceptibility stratigraphy numerical biostratigraphy and heavy mineral stratigraphy Where appropriate each paper discusses data generation methods including sample preparation and analytical methods as well outlining data interpretation methods This is followed by case histories that demonstrate how those data are used to resolve stratigraphic problems commonly using material derived from petroleum basins around the World Comparative Planetology, Geological Education, History of Geology Wang Hongzhen, 1997-06 First published in 1997 Routledge is an imprint of Taylor Francis an informa company Stratigraphy: A Modern Synthesis Andrew D. Miall, 2022-03-02 The updated textbook is intended to serve as an advanced and detailed treatment of the evolution of the subject of stratigraphy from its disparate beginnings as separate studies of sedimentology lithostratigraphy chronostratigraphy etc into a modern integrated discipline in which all components are necessary There is a historical introduction which now includes information about the timeline of the evolution of the components of modern stratigraphy The elements of the various components facies analysis sequence stratigraphy mapping methods chronostratigraphic methods etc are outlined and a chapter discussing the modern synthesis is included near the end of the book which closes with a discussion of future research trends in the study of time as preserved in the stratigraphic record *Sedimentary Facies in Geological History* Geological Society of America.
