Sensation And Judgement Complementarity Theory Of Psychophysics:

Sensation and Judgment John C. Baird, 2014-02-25 Psychophysical theory exists in two distinct forms one ascribes the explanation of phenomena and empirical laws to sensory processes Context effects arising through the use of particular methods are an unwanted nuisance whose influence must be eliminated so that one isolates the true sensory scale The other considers psychophysics only in terms of cognitive variables such as the judgment strategies induced by instructions and response biases Sensory factors play a minor role in cognitive approaches This work admits the validity of both forms of theory by arguing that the same empirical phenomena should be conceptualized in two alternative apparently contradictory ways This acceptance of opposites is necessary because some empirical phenomena are best explained in terms of sensory processes while others are best ascribed to central causes The complementarity theory stresses the mutually completing nature of two distinct models The first assigns importance to populations of sensory neurons acting in the aggregate and is formulated to deal with sensory effects The second assigns importance to judgment uncertainty and to the subject strategies induced by experimental procedures This model is formulated to explain context effects Throughout the text the exposition is interlaced with mathematics graphs and computer simulations designed to reveal the complementary nature of psychophysical explanations

A Conceptual History of Psychophysics Nicola Bruno, 2024-08-24 This book explores the concept of psychophysics and details the development of the ideas which made the mathematisation of desire possible The experience of desire accompanies us all throughout life but dealing with it as psychologists and scientists is far from easy Psychophysics was conceived to help map mathematically these unknowable feelings of desire As such this book will help to provide an accessible account of psychophysics while telling the story of its creation which was in essence the birth of scientific psychology and contemporary cognitive neuroscience alongside many of the technologies which characterize the contemporary world It is a strange and intriguing story which begins with the German physiologist Ernst Heinrich Weber in the first half of the nineteenth century and its story will help the reader gain fresh insight into how scientists came to be able to map and quantify complex and private emotional states

Psychophysics Beyond Sensation Christian Kaernbach, Erich Schröger, Hermann Müller, Hermann Müller, Erich Schröger, 2004-05-20 This volume presents a series of studies that expand laws invariants and principles of psychophysics beyond its classical domain of sensation This book's goal is to demonstrate the extent of the domain of psychophysics ranging from sensory processes through sensory memory and short term memory issues to the interaction between sensation and action The dynamics and timing of human performance are a further important issue within this extended framework of psychophysics Given the similarity of the various cortical areas in terms of their neuroanatomical structure it is an important question whether this similarity is paralleled by a similarity of processes These issues are addressed by the contributions in the present volume using state of the art research methods in behavioral research psychophysiology and mathematical modeling The book is divided into four sections Part I presents contributions

concerning the classical domain of psychophysical judgment The next two parts are concerned with elementary and higher order processes and the concluding section deals with psychophysical models The sections are introduced by guest editorials contributed by independent authors These editorials present the authors personal view on the respective section providing an integrated account of the various contributions or highlighting their focus of interest among them While also voicing their own and sometimes different point of view they contribute to the process of discussion that makes science so exciting This volume should be of great interest to advanced students in neuroscience cognitive science psychology neuropsychology and related areas who seek to evaluate the range and power of psychological work today Established scientists in those fields will also appreciate the variety of issues addressed within the same methodological framework and their multiple interconnections and stimulating cross talk

Lack in the Beingstalk Philip McShane, 2006-12-17 Proposes that a Calculus of Variations analogous to that which interested the early Husserl is to replace the isolation of individuals and disciplines and lead to genuine progress and economic justice The reach beyond effete academic isolation implies that adult growth is viewed normatively as accelerating

Sensation and Perception Hugh Foley, Margaret Matlin, 2015-08-20 Sensation and Perception Fifth Edition maintains the standard of clarity and coverage set in earlier editions which make the technical scientific information accessible to a wide range of students The authors have received national awards for their teaching and are fully responsible for the content and organization of the text As a result it features strong pedagogy abundant student friendly examples and an engaging conversational style

Birnbaum, 1997-11-27 Measurement Judgment and Decision Making provides an excellent introduction to measurement which is one of the most basic issues of the science of psychology and the key to science Written by leading researchers the book covers measurement psychophysical scaling multidimensional scaling stimulus categorization and behavioral decision making Each chapter provides a useful handbook summary and unlocks the door for a scholar who desires entry to that field Any psychologist who manipulates an independent variable that affects a psychological construct or who uses a numerical

dependent variable to measure a psychological construct will want to study this book Written by leading researchers in fields of measurement psychophysical scaling multidimensional scaling stimulus categorization and behavioral decision making Provides basic definitions and summaries of theories Presents summaries and citations to relevant literature Contains new developments current controversies and open questions Explains relationships among fields and historical links

Measurement and Representation of Sensations Hans Colonius,Ehtibar N. Dzhafarov,2013-05-13 Measurement and Representation of Sensations offers a glimpse into the most sophisticated current mathematical approaches to psychophysical problems In this book editors Hans Colonius and Ehtibar N Dzhafarov top scholars in the field present a broad spectrum of innovative approaches and techniques to classical problems in psychophysics at different levels of stimulus complexity The chapters emphasize rigorous mathematical constructions to define psychophysical concepts and relate them to observable phenomena The techniques presented both deterministic and probabilistic are all original and recent Subjects addressed throughout the six chapters of this volume include computing subjective distances from discriminability a new psychophysical theory of intensity judgments computing subjective distances from two discriminability functions an alternative to the model building approach based on observable probabilities and possible forms of perceptual separability developed within a generalization of General Recognition Theory Measurement and Representation of Sensations is a valuable text for both behavioral scientists and applied mathematicians **Invariances in Human Information**

Temporality Ihor Lubashevsky,Natalie Plavinska,2021-10-21 This book presents a novel account of the human temporal dimension called the human temporality and develops a special mathematical formalism for describing such an object as the

human mind One of the characteristic features of the human mind is its temporal extent For objects of physical reality only the present exists which may be conceived as a point like moment in time In the human temporality the past retained in the memory the imaginary future and the present coexist and are closely intertwined and impact one another This book focuses on one of the fragments of the human temporality called the complex present A detailed analysis of the classical and modern concepts has enabled the authors to put forward the idea of the multi component structure of the present For the concept of the complex present the authors proposed a novel account that involves a qualitative description and a special mathematical formalism This formalism takes into account human goal oriented behavior and uncertainty in human perception The present book can be interesting for theoreticians physicists dealing with modeling systems where the human factor plays a crucial role philosophers who are interested in applying philosophical concepts to constructing mathematical models and psychologists whose research is related to modeling mental processes

Relational Psychophysics in Humans and Animals Viktor Sarris, 2007-09-12 Relational Psychophysics in Humans and Animals offers a comprehensive and integrated overview of the often fragmented field of psychophysics It introduces key concepts in psychophysics and clearly summarises and illustrates the central issues through telling examples It combines empirical research and theoretical approaches from general psychophysics animal psychophysics and human infant psychophysics to create a systematic comparison of these three key areas Through out Viktor Sarris makes a strong case for more comparative psychophysical research across different species and across different stages of development He presents original research and examines frame of reference models behavioural psychophysics developmental psychophysics perceptual cognitive psychophysics and evolutionary perspectives to create an integrated framework for the direction of new research The book will be an invaluable aid for researchers in the fields of perception and psychophysics

Measurement With Persons Birgitta Berglund, Giovanni B. Rossi, James T.

Townsend, Leslie R. Pendrill, 2013-05-13 Measurements with persons are those in which human perception and interpretation are used for measuring complex holistic quantities and qualities which are perceived by the human brain and mind Providing means for reproducible measurement of parameters such as pleasure and pain has important implications in evaluating all kind of products services and conditions This book inaugurates a new era for this subject a multi and inter disciplinary volume in which world renowned scientists from the psychological physical biological and social sciences reach a common understanding of measurement theory and methods In the first section generic theoretical and methodological issues are treated including the conceptual basis of measurement in the various fields involved the development of formal representational and probabilistic theories the approach to experimentation and the theories models and methods for multidimensional problems In the second section several implementation areas are presented including sound visual skin and odor perception functional brain imagining body language and emotions and finally the use of measurements in decision making Measurement with Persons will appeal to a wide audience across a range of sciences including general psychology and psychophysics measurement theory metrology and instrumentation neurophysiology engineering biology and chemistry

The Creation of Scientific Psychology David J. Murray, Stephen W. Link, 2021-02-15 With an emphasis on developments taking place in Germany during the nineteenth century this book provides in depth examinations of the key contributions made by the pioneers of scientific psychology Their works brought measurement and mathematics into the study of the mind Through unique analysis of measurement theory by Whewell mathematical developments by Gauss and theories of mental processes developed by Herbart Weber Fechner Helmholtz M ller Delboeuf and others this volume maps the beliefs discoveries and interactions that constitute the very origins of psychophysics and its offspring Experimental Psychology Murray and Link expertly combine nuanced understanding of linguistic and historic factors to identify theoretical approaches to relating physical intensities and psychological magnitudes With an eye to interactions and influences on future work in the field the volume illustrates the important legacy that mathematical developments in the nineteenth century have for twentieth and twenty first century psychologists This detailed and engaging account fills a deep gap in the history of psychology The Creation of Scientific Psychology will appeal to researchers academics and students in the fields of history of psychology psychophysics scientific and mathematical psychology Mathematical Principles of Human Conceptual Behavior Ronaldo Vigo, 2014-10-03 The ability to learn concepts lies at the very core of human cognition enabling us to efficiently classify organize identify and store complex information In view of the basic role that concepts play in our everyday physical and mental lives the fields of cognitive science and psychology face three long standing challenges discovering the laws that govern concept learning and categorization behavior in organisms showing how they inform other areas of cognitive research and describing them with the mathematical systematicity and precision found in the physical sciences In light of these theoretical and methodological shortcomings this volume will introduce a set of general

mathematical principles for predicting and explaining conceptual behavior The author's theory is based on seven fundamental constructs of universal science invariance complexity information similarity dissimilarity pattern and representation These constructs are joined by a novel mathematical framework that does not depend on probability theory and derives key results from conceptual behavior research with other key areas of cognitive research such as pattern perception similarity assessment and contextual choice The result is a unique and systematic unifying foundation for cognitive science in the tradition of classical physics

The Method of Response Function in Psychology & Sociology Irina G. Malkina-Pykh, Y. A. Pykh, 2013 Social psychological and sociological systems present considerable difficulties for modellers due to their complexity multidimensionality uncertainty and irreducibility The book proposes that response functions MRF be used as a method of constructing purposeful credible and integrated social systems models from data and prior knowledge or information A semi empirical or grey box MRF model may be regarded as a trade off between a knowledge based model and a black box empirical model It may embody all the existing knowledge on the process or a part thereof and in addition it relies on parameterised functions whose parameters are determined from measurements Observations contain hidden information on the processes under consideration and one of the main purposes of the proposed method is to extract and describe these hidden relationships Parameterisation offers ways to couple qualitative with quantitative analysis This combination makes it possible to take into account all the phenomena that are not modelled with the required accuracy through prior knowledge Although only a simplified picture of the processes is modelled a grey box system model provides some insight into the system processes These processes are featured by chains of causality highlighting stressors and variables responsive to stressors The method of response functions is a nonlinear regression method that implies credible models in the sense that they are identifiable and hopefully explain system output behaviour satisfactorily For case studies the authors have selected the problems usually studied by psychologists and sociologists with statistical procedures such as investigation of variance and discriminant analysis based on the general linear model or one of its multivariate generalisations structural equation models etc disordered eating and obesity subjective well being and alexithymia An accompanying CD ROM contains the demonstration versions of three models that are discussed in the various chapters The Method of Response Functions in Psychology and Sociology is aimed at Mathematical Psychologists Mathematical Sociologists Applied Psychologists Sociologists and Social Practitioners It will also be suitable for use on undergraduate as well as graduate and postgraduate courses specializing in these areas

Computational, Geometric, and Process Perspectives on Facial Cognition Michael J. Wenger, James T. Townsend, 2005-04-11 Within the last three decades interest in the psychological experience of human faces has drawn together cognitive science researchers from diverse backgrounds Computer scientists talk to neural scientists who draw on the work of mathematicians who explicitly influence those conducting behavioral experiments The chapters in this volume illustrate the breadth of the research on facial perception

and memory with the emphasis being on mathematical and computational approaches In pulling together these chapters the editors sought to do much more than illustrate breadth They endeavored as well to illustrate the synergies and tensions that inevitably result from adopting a broad view one consistent with the emerging discipline of cognitive science
