Theory of child development

- **Object Constancy** - The phase when the child understands that the mother has a separate identity and is truly a separate individual. This leads to the formation of **Internalization**, which is the internal representation that the child has formed of the mother. This Internalization is what provides the child with an image that helps supply them with an unconscious level of guiding support and comfort from their mothers. Deficiencies in positive Internalization could possibly lead to a sense of insecurity and low self esteem issues in adulthood.

Applications of Existential Psychology Zoltán Köváry, 2024-12-30 The second in a two-part set, this volume offers a detailed examination of the application of existential psychology. This book begins by looking at the *conditio humana*, the most important topics of existential psychology including anxiety, freedom, choices, authenticity, suffering, and meaning, creativity, togetherness, time, and death. It then moves through the practical application of existential psychology in the context of dreams, research, pathology, and therapy. Examining key theories, models, and research, the volume offers a fascinating overview of how the disciplines of art, philosophy, literature, science, and theology contribute to a deeper understanding of personal self-knowledge and a person's sense of purpose. This unique transdisciplinary approach demonstrates how readers can apply philosophical, historical, and artistic aspects of existential psychology to their lives. The book concludes by considering the role of existential psychology in the present. Going beyond the questions of therapy and counselling that typically make up the study of existential psychology, the book offers the ultimate introduction for students and scholars of this fascinating and deeply rooted discipline. It may also interest professionals working in related fields.
