## **Sepsis And Organ Dysfunction Epidemiology And Scoring Systems Pathophysiology And Therapy:**

*Sepsis and Organ Dysfunction* A.E. Baue,G. Berlot,A. Gullo,2012-12-06 Sepsis is a syndrome or sometimes it is a clinical condition evoked by uncontrolled endotoxin reactions These pathophysiological alterations can disturb the organism s homeostasis leading ultimately to a condition of severe organ dysfunction which in itself means a bad prognosis for patient survival In the last decades researchers and clinicians have been involved in process directed to a better understanding of the basic mechanisms of sepsis and MODS The best goal will be the achievement of preventive measures and optimization of management in patients suffering severe infections and critical conditions This objective represents a true challenge at the dawn of the XXI century

*Sepsis and Organ Dysfunction* A.E. Baue,G. Berlot,A. Gullo,J.-L. Vincent,2012-12-06 Even if in the last years more information on sepsis and new treatments has become available mortality rate is however high In fact the complexity of the several biohumoral factors involved in this process is difficult to understand Another major problem is the consequent organ failure which grows in a sequential way and in relation with the lesion gravity and the functional reserves of the patient The volume presents the most recent results of research in this field

**Pathology of Septic Shock** Ernst T. Rietschel,Hermann Wagner,2012-12-06 Severe sepsis and septic shock are the most serious complications of bacterial infections Both gram positive and gram negative bacteria can trigger these extreme inflammatory responses and by so doing cause substantial morbidity and mortality In the United States alone over 400 000 patients suffer from septicaemia each year and approximately 100 000 of these patients die despite optimal intensive care and modern antimicrobial therapy These dramatic figures have prompted intensive research to define the bacterial and host factors involved in the septic response Scientists from many disciplines including chemistry physics biology medical microbiology immunology and pharmacology have worked closely with clinicians to achieve rapid and profound progress To translate this newly acquired knowledge into clinical practice clinical trials have also been performed to evaluate numerous new therapeutic drugs The disappointing

results from these trials have underscored a major lesson namely that sepsis constitutes an extremely complex syndrome and that basic and clinical research must be greatly intensified in order to illuminate its molecular mechanisms At this stage the editors of the present volume of Current Topics in Microbiology and Immunology considered it would be rewarding to compile a volume summarizing our present basic and clinical knowledge on sepsis Our particular gratitude extends to those international experts who have followed our invitation and elaborated on particular areas of the basic and clinical aspects of this field
