Serotonin From Cell Biology To Pharmacology And Therapeutics:

Serotonin Paul M. Vanhoutte, Rodolfo Paoletti, Nicoletta Brunello, Franco M. Maggi, 2012-12-06 This volume represents the proceedings of the invited lectures of the first International Symposium on Serotonin from Cell Biology to Pharmacology and Therapeutics which was held in Florence on March 29 April 1989 This meeting held under the co sponsorship of the Serotonin Club and the Fondazione Giovanni Lorenzini represents the first attempt to bring together scientists fascinated by the complexity of the action of 5 hydroxytryptamine throughout the body and in various species Hence this volume provides the reader with the unique overview of the sources effects receptors physiological actions and pathological role of Serotonin As such it will be of interest not only to the person devoting her or his research efforts to the study of 5 hydroxytryptamine but also to all scholars and even clinicians wanting to know how the powerful monoamine can modulate cellular functions To accelerate the publication of these proceedings the Editors and the publishers have selected the camera ready format and have avoided a lengthy refereeing process Hence the scientific content of and the opinions expressed in the chapters are the sole responsibility of the authors The Editors Milan and Houston The Editors want to thank Mrs H Liepman and her staff at Kluwer for the prompt and efficient handling of the manuscripts Neurovascular Immunology Thomas C.

Moore, 1992-10-28 Neurovascular Immunology provides an in depth exploration of the neurovascular branch of the neuro immune axis The book includes discussions regarding the role of neurovascular molecules and their evolutionary history in biological defense their major functions in invertebrates their roles in terrestrial vertebrates and their involvement in the organization and function of the vascular and nervous systems including the immune response defense system The book will appeal to all researchers practitioners and students interested in the functions of the nervous vascular and immune response systems

Basic Mechanisms of the EEG Zschocke, Speckmann, 2012-12-06 This volume is based on selected and updated papers from the symposium on Basic Mechanisms of the EEG which was held under the sponsorship of the German EEG Society in Hamburg on September 28 29 1990 The intention of this symposium was to relate recent experimental clinical and neuropathological data on the basic mechanism that underlie the EEG Although we know much about these mechanisms there is still much more to be learned The symposium was partly the continuation of an earlier symposium on Origin of Cerebral Field Potentials held in 1979 in Munster under the leadership of one of the present editors E J Speckmann and H Caspers The present work combines new experimental and clinical results with state of the art reports giving excellent general views The first chapter presents a historical survey of the roots of current developments in neurophysiology It seems that in the near future we may decipher the EEG which we have considered up to now somewhat as a cryptogram chapter 2 After chapter 3 a chapter concerned with more general points of the generation of cortical field potentials chapters 4 5 and 6 deal with several aspects and models of interactions and rhythms of cortical neurons The role of glial cells in cortical electrical field generation is considered in chapter 7 Chapter 8 emphasizes the significance of brain metabolism *National*

Neurochemistry in Clinical Application Lily C. Tang, Stephen J. Tang, 2012-12-06 Neurological disorders cause untold suffering and financial burden to hundreds of thousands of people not only to the patients but also the relatives and society As of today though numerous scientists and clinicians have devoted their efforts to understand and combat these diseases there is still no cure or satisfactory solution to the problems Furthermore the brain is the most essential organ of a human being Realizing the importance of the brain the president of the United States George Bush declared the 90s as the Decade of the Brain in January 1992 Being in neuroscience research for almost three decades I initiated planned and organized the first international neuropharmacology symposium After long negotiation and fund raising with the assistance and moral support of Dr Abel Lajtha director of the Center of Neurochemistry in New York USA we finally successfully put the program together The Sun Yat sen Foundation in China supported all the local expenses of the symposium and Sun Yat sen University of Medicine in Guangzhou China served as host organization The symposium was held in Guangzhou China November 9 11 1992 the eve of Dr Sun Yat sen s birthday Dr Sun Yat sen was born in Cui Heng Cun on the outskirts of Guangzhou China on

The Pharmacology of Alcohol Abuse Henry R. Kranzler,2012-12-06 In recent years alcohol abuse has received increased international attention Such attention is justified by the enormous negative impact that this disorder has on health as well as on economic and social well being Governmental and other sources of research support have promoted substantial investigation into the negative consequences of alcohol examining both animal models and human subjects Consequently there has been a virtual explosion of preclinical and clinical data much of it focused on alcohol s pharmacologic effects However there have been few efforts to integrate this wealth of new information into a single manageable volume This volume provides an up to date in depth treatment of the pharmacology of alcohol particularly as it relates to alcohol abuse The overriding theme of the book is the interplay between the preclinical and clinical domains Increasingly these areas of investigation have served to inform one another a trend that can be expected to grow with time The topics covered include the effects of alcohol on biological systems and the impact of medications on those effects In addition recent insights obtained from molecular biological investigations are discussed in terms of their relevance for understanding the effects of alcohol at the cellular level and the implications of these for the development of medications Consideration is also given to important methodological issues that influence the evaluation of medications in the context of clinical trials

Pharmacological Sciences: Perspectives for Research and Therapy in the Late 1990s A. Claudio Cuello,Brian Collier,2012-12-06 This volume arose from the scientific program of the XIIth International Congress of Pharmacology held in Montreal Canada July 24 29 1994 The scientific program included plenary lectures and symposia in addition to poster presentations and colloquia The abstracts of the Congress presentations were published as supplement 1 of volume 72 by the Canadian Journal of Physiology Dr Brian Collier was chair of the scientific program committee and thus also collaborated on this work The objective that we pursued was to produce a volume of reasonable size which would feature all of the plenary lectures and symposia from those authors who agreed to participate To this end we solicited mini reviews from plenary lecturers and asked symposia organizers to coordinate a single short review covering the individual topics within their event Those who accepted this challenge are evident in this volume We express our gratitude to these authors for doing so and for exercising considerable ingenuity in
