Microbiological Hazards Of Infusion Therapy:

Microbiological Hazards of Infusion Therapy I. Philips, P.F. d'Arcy, P.D. Meers, 2012-12-06 All too often the fruits of modern medicine are blighted by avoidable infection when patients on whom technical skills have been lavished die or lose a benefit they might otherwise have enjoyed Although such a loss is expensive both in terms of human tragedy and of wasted time and resources scant attention is paid to its prevention compared with that which goes into the development and use of the advanced techniques which so often bring infections in their train The intravascular route for biochemical pharmacological nutritional and other physiological support and monitoring necessary to patients undergoing many of the demanding modern medical procedures opens a channel through which infection all too easily finds a way When it does it may be unsuspected and undetected until too late by those whose attention is fixed on the end they seek while forgetting that the means they use can produce preventable disease The largest medical use of the intravascular route is for intravenous therapy Little service is paid to the idea that this carries a significant morbidity and mortality but surprisingly little has been done to measure its incidence or design measures to avoid it In the early 1970s the medical and pharmaceutical professions and the lay public were startled by the realization of the microbiological threat to patients infused with products which had been subject to manufacturing error in their design or production

Phillips, 1976 **The American Journal of Intravenous Therapy**, 1977 **Infection Control in Home Care and Hospice** Emily Rhinehart, 2006 An official publication of the Association for Professionals in Infection Control and Epidemiology Inc APIC the highly successful Infection Control in Home Care and Hospice helps home care providers assess the infection control needs of their organization and develop home care infection and surveillance programs The Second Edition has been thoroughly updated and revised with the latest CDC Guidelines on infection control in home care including Hand Hygiene Prevention of IV related Infections and the 2004 Isolation Guideline **Quality Assurance in Blood**

Banking and Its Clinical Impact C.Th. Smit Sibinga, P.C. Das, H.F. Taswell, 2012-12-06 THE PHILOSOPHY OF QUALITY ASSURANCE IN THE BLOOD BANK H F Taswell One year before this symposium Cees Smit Sibinga and I began to discuss an approach to quality assurance in the blood bank which we felt would be both important and practical and could serve as the basis for the choice of subjects to be presented in the symposium As an introduction to this book I would like to outline our approach the subjects chosen and the rationale behind our choice What is the fundamental purpose of a blood bank and transfusion service Simply stated the purpose of a blood bank and transfusion service and of a quality assurance program in blood banking is for the one to provide and the other to assure safe and effective transfusion therapy This objective is in contrast to that of other clinical laboratories The objective in a clinical chemistry laboratory is to produce accurate test results which will be meaningful to the clinician taking care of his patient In most clinical laboratories therefore the goals of a quality assurance program are largely quantitative that is to assure accurate numerical test results In contrast in the blood

bank the goals of quality assurance are primarily qualitative that is to assure safe and effective transfusion As a result two somewhat different approaches to quality assurance are necessary Current Catalog National Library of Medicine

Annual Summary ,1981 *Infective Endocarditis and Other Intravascular Infections* Lawrence R. Freedman,2012-12-06

The most important example of intravascular infection is infective endocarditis IE a common and serious disorder in man In the past these infections were uniformly fatal but since the development of potent antimicrobial agents bacteriological cure has become practical and predictable So for a while it seemed that intravascular infection would diminish in importance and be relegated to the stockpile of illnesses which physicians one or two generations earlier used to see frequently In recent years however spectacular technological advances cardiac surgery intravascular devices hemodialysis accompanied by profound social deterioration intravenous drug usage have provided new breeding grounds for the development of these infections So it is that a large percentage of intravascular infections may be looked upon today as one of the diseases of medical progress and social evolution This progress however has not only contributed to the encouragement of the disease there is another side to the coin the same technological advances that have served to increase the frequency of infection e g intravascular plastic catheters have also led to the first simple easily reproducible laboratory animal model for the study of the disease thus advancing our understanding of the prophylaxis treatment and general biology of these infections Figures 1 and 2 Similarly whereas the insertion of prosthetic heart valves has created a new group of patients with endocarditis these same surgical techniques are lifesaving to patients with endocarditis whose aortic valves have perforated **Artificial**
