River Ecology and Management Robert J. Naiman, S. Kantor, Robert E. Bilby, 2001-03-02 As the vast expanses of natural forests and the great populations of salmonids are harvested to support a rapidly expanding human population the need to understand streams as ecological systems and to manage them effectively becomes increasingly urgent The unfortunate legacy of such natural resource exploitation is well documented For several decades the Pacific coastal ecoregion of North America has served as a natural laboratory for scientific and managerial advancements in stream ecology and much has been learned about how to better integrate ecological processes and characteristics with a human dominated environment These in sightful but hard learned ecological and social lessons are the subject of this book Integrating land and rivers as interactive components of ecosystems and watersheds has provided the ecological sciences with important theoretical foundations Even though scientific disciplines have begun to integrate land based processes with streams and rivers the institutions and processes charged with managing these systems have not done so successfully As a result many of the watersheds of the Pacific coastal ecoregion no longer support natural settings for environmental processes or the valuable natural resources those processes create An important role for scientists educators and decision makers is to make the integration between ecology and consumptive uses more widely understood as well as useful for effective management

Mu. Ramkumar, K. Kumaraswamy, R. Mohanraj, 2015-02-18 This book offers a unique collection of inter and multidisciplinary

studies on river systems Rivers have been the prime source of sustenance since the advent of civilization and river systems often form the basis for agriculture transport water and land for domestic commercial and industrial activities fostering economic prosperity A river basin is a basic geographical and climatological unit within which the vagaries of natural processes act and manifest themselves at different spatio temporal scales Even if compared side by side no two river basins respond to natural processes in the same way and thus it has long been recognized that each river basin is unique Hence any developmental activity or conservation effort has to be designed and implemented to match each unique river basin With the burgeoning population and increasing dependency on natural resources understanding and maintaining river systems has become increasingly important This book provides a varied reference work on and unprecedented guidelines for conducting and implementing research on river basins and for managing their ecological development

Geomorphology and River Management Gary J. Brierley, Kirstie A. Fryirs, 2013-04-29 This book outlines a generic set of procedures termed the River Styles Framework which provides a set of tools for interpreting river character behavior condition and recovery potential Applications of the framework generate a coherent package of geomorphic information providing a physical template for river rehabilitation activities management and restoration of rivers is a rapidly growing topic for environmental scientists geologists and ecologists this book provides a learning tool with which to approach geomorphic applications to river management describes the essential geomorphological principles underlying river behaviour and evolution demonstrates how the River Styles Framework can turn geomorphic theory into practice to develop workable strategies for restoration and management based on real case studies and authors extensive experience applicable to river systems worldwide synthesises fluvial geomorphology ecology and management Northwest Forest Plan Research Synthesis Richard W. Stream Hydrology Nancy D. Gordon, Thomas A. McMahon, Brian L. Finlayson, Christopher J. Gippel, Rory J. Nathan, 2013-05-03 Since the publication of the first edition 1994 there have been rapid developments in the application of hydrology geomorphology and ecology to stream management In particular growth has occurred in the areas of stream rehabilitation and the evaluation of environmental flow needs The concept of stream health has been adopted as a way of assessing stream resources and setting management goals *Stream Hydrology An Introduction for Ecologists Second Edition* documents recent research and practice in these areas Chapters provide information on sampling field techniques stream analysis the hydrodynamics of moving water channel form sediment transport and commonly used statistical methods such as flow duration and flood frequency analysis Methods are presented from engineering hydrology fluvial geomorphology and hydraulics with examples of their biological implications This book demonstrates how these fields are linked and utilised in modern scientific river management Emphasis on applications from collecting and analysing field measurements to using data and tools in stream management Updated to include new sections on environmental flows rehabilitation measuring stream health and stream classification Critical reviews of the successes

and failures of implementation Revised and updated windows based AQUAPAK software This book is essential reading for 2nd 3rd year undergraduates and postgraduates of hydrology stream ecology and fisheries science in Departments of Physical Geography Biology Environmental Science Landscape Ecology Environmental Engineering and Limnology It would be valuable reading for professionals working in stream ecology fisheries science and habitat management environmental consultants and engineers

Restoration of Puget Sound Rivers David R. Montgomery, Susan Bolton, Derek B. Booth, Leslie Wall, 2015-12-31 The recent listing of Pacific salmon under the Endangered Species Act has led to substantial interest in the scientific basis for river restoration in the Pacific Northwest Millions of dollars in state and federal funding have been programmed for habitat restoration efforts to stem the decline of salmon populations in the region This volume addresses the need for a solid understanding of fluvial processes and aquatic ecology in order to predict both river and salmonid response to restoration projects In the Pacific Northwest as in most regions of the United States we are still learning about the processes that create habitat and river structure how those processes influence aquatic ecosystems and how to gauge the response of river systems to both land use changes and restoration efforts River systems are still responding to historic changes and degraded habitat may not be restored successfully if natural conditions are not well understood particularly if massive changes in watershed hydrology or other processes are the root cause These issues faced in the development of regional river restoration programs are by no means unique to the Northwest and so the initiation of a regional program of river restoration provides an opportunity to evaluate the state of river restoration in general The eighteen chapters of *Restoration of Puget Sound Rivers* presented by the region's experts at a symposium of the Society for Ecological Restoration examine geological and geomorphological controls on river and stream characteristics and dynamics biological aspects of river systems in the region and the application of fluvial geomorphology civil engineering riparian ecology and aquatic ecology in efforts to restore Puget Sound Rivers This volume will be of interest to geomorphologists aquatic biologists civil engineers planners and all those interested in the interface of science and policy in addressing one of the fundamental environmental challenges of the twenty first century

Sand Mining D. Padmalal, K. Maya, 2014-06-12 This book addresses most of the environmental impacts of sand mining from small rivers The problems and solutions addressed in this book are applicable to all rivers that drain through densely populated tropical coasts undergoing rapid economic growth Many rivers in the world are drastically being altered to levels often beyond their natural resilience capability Among the different types of human interventions mining of sand and gravel is the most disastrous one as the activity threatens the very existence of river ecosystem A better understanding of sand budget is necessary if the problems of river and coastal environments are to be solved

Fishes and Forestry Thomas G. Northcote, G. F. Hartman, 2008-04-15 Many species of fish occupying inland waters reside in watersheds that were or still are surrounded by forests and are dependent in major ways upon such cover The interactions

between fishes and forests are complex multifaceted dynamic processes involving most inland surface waters forests subsurface waters geology and soils climate and its changes and the biotic components of the relevant ecosystems These interactions also include the aspects of forestry tied to human development economics population growth and even philosophies Fishes and Forestry is truly a landmark publication The editors Professors Northcote and Hartman have drawn together and carefully edited chapters written by 56 scientists from around the world covering a vast wealth of information never before appearing within the covers of one book Following an introductory chapter this exceptional work is broadly divided into sections covering the ecology of forests streams lakes and estuaries fish biology and ecology forestry activities and their effects on aquatic systems and fishes 14 chapters covering examples of fish forestry interactions from around the world and a final section covering means of effecting better fish forestry interactions Fishes and Forestry is an essential purchase for all those involved in inland fisheries forestry and their interaction including fisheries scientists fish biologists ecologists environmental scientists and forestry scientists Libraries in all universities and research establishments where these subjects are studied and taught should have several copies on their shelves

Northwest Forest Plan : the First 10 Years (1994-2003), 2006 *Bitterroot National Forest (N.F.), Burned Area Recovery, Ravalli County*, 2001 *River Science* David J. Gilvear, Malcolm T. Greenwood, Martin C. Thoms, Paul J. Wood, 2016-03-03 River Science is a rapidly developing interdisciplinary field at the interface of the natural sciences engineering and socio political sciences It recognises that the sustainable management of contemporary rivers will increasingly require new ways of characterising them to enable engagement with the diverse range of stakeholders This volume represents the outcome of research by many of the authors and their colleagues over the last 40 years and demonstrates the integral role that River Science now plays in underpinning our understanding of the functioning of natural ecosystems and how societal demands and historic changes have affected these systems The book will inform academics policy makers and society in general of the benefits of healthy functioning riverine systems and will increase awareness of the wide range of ecosystem goods and services they provide

Riparian Management in Forests of the Continental Eastern United States Ellen S. Verry, James W. Hornbeck, C. Andrew Dolloff, 1999-12-06 The timing could not be better for addressing riparian area management and the resulting impacts of surface water The Forest Service leadership team has identified water and watershed management as the issue of the upcoming decade These factors and more have moved riparian forests to the forefront of environmental management Riparian Management in Forests of the Continental Eastern United States gives you the tools you need to take on this task Each day thousands of natural resource professionals face the problems involved in managing riparian forests The challenge fragmented ownership fragmented ecosystems and diverse interest groups The solution requires a multidisciplinary approach drawing on a complex mix of government agencies private interests and local communities as exemplified in the following initiatives Chesapeake Bay Program Save the Bay Inland West Water Strategy New York City Watershed Project

The Pacific Habitat Strategy The Anadromous Fish Habitat Riparian Management in Forests of the Continental Eastern United States summarizes the state of the art in the management of forested riparian areas It serves as a desktop reference for natural resource administrators educators and on the ground managers from industry consulting firms and municipal state and federal agencies who routinely face the complex problems of protecting riparian areas Features *Riparian and Aquatic Habitats of the Pacific Northwest and Southeast Alaska* Fred H. Everest,2007 Management of riparian habitats is controversial because land use policies have historically emphasized economic values e g timber production at the expense of ecological and social values Attempting to manage these valuable resources to attain the greatest combination of benefits has created a long term controversy that continues to the present Our analysis indicates that at mid to large spatial scales healthy riparian ecosystems and land management activities are not mutually exclusive but the degree of compatibility is determined by policy decisions based on competing demands and pressing timelines as well as available scientific knowledge Current management schemes on federal lands in the Pacific Northwest and Alaska are appropriately addressing large spatial scales and incorporating the principles of disturbance ecology We found no scientific evidence that either the default prescriptions or the options for watershed analysis in the Northwest Forest Plan and Tongass Land Management Plan provide more protection than necessary to meet stated riparian management goals We believe that additional alternative riparian management strategies could be implemented and evaluated in concert to shorten the time needed to realize effective strategies that fully meet riparian management goals

Advances in Spatio-Temporal Analysis Xinming Tang,Yaolin Liu,Jixian Zhang,Wolfgang Kainz,2007-08-23 Developments in Geographic Information Technology have raised the expectations of users A static map is no longer enough there is now demand for a dynamic representation Time is of great importance when operating on real world geographical phenomena especially when these are dynamic Researchers in the field of Temporal Geographical Information Systems TGIS have been developing methods of incorporating time into geographical information systems Spatio temporal analysis embodies spatial modelling spatio temporal modelling and spatial reasoning and data mining Advances in Spatio Temporal Analysis contributes to the field of spatio temporal analysis presenting innovative ideas and examples that reflect current progress and achievements

Restoring the Pacific Northwest Dean Apostol,Marcia Sinclair,2012-09-26 The Pacific Northwest is a global ecological hotspot because of its relatively healthy native ecosystems a high degree of biodiversity and the number and scope of restoration initiatives that have been undertaken there Restoring the Pacific Northwest gathers and presents the best examples of state of the art restoration techniques and projects It is an encyclopedic overview that will be an invaluable reference not just for restorationists and students working in the Pacific Northwest but for practitioners across North America and around the world
