*Two-dimensional steady squeezing flow over a vertical porous channel with free convective heat/mass transfer and invariable suction* Zeeshan,Waris Khan,Taoufik Saidani,Florentin Smarandache,Muhammad Shahid Khan,Hamdi Ayed,M. Modather M. Abdou,2024-01-01 This research reports on the combined effects of heat and mass transfer HMT under the influences of the Soret and Dufour in natural convection steady 2D magnetohydrodynamic flow through the boundary layer in

a porous vertical tube or duct The current study is motivated by the significant applications of HMT in engineering processes such as casting and welding The goal of this framework is to explore the assisting and opposing movements with HMT above a vertical porous channel under the influence of invariant suction and fluid dissipation which have not been reported in the earlier studies The governing flow equations in terms of partial differential equations PDEs are altered to dimensionless ordinary differential equations ODEs by using dimensionless variables Employing the BVP4C approach the leading equations are solved numerically The dual nature of solutions has been observed due to suction Stability exploration has been provided to confirm a stable solution A comparison between published and current studies shows outstanding agreement Key parameter effects on flow characteristics are visually offered using graphs as well as tables It is noteworthy that the influence of Soret effects becomes apparent in a suspended mixture of particles and fluids These phenomena can be attributed to temperature differences whereby the motion of fluid particles in the warmest region with the maximum energy level causes the particles to migrate towards the coldest region Notably the flow speed rate at the left plate is initially high and slowly diminishes near the right plate

*Scientia Iranica*, 2004 *Thermal Management of Electronic Systems* C.J. Hoogendoorn, R.A.W.M. Henkes, C.J.M. Lasance, 2012-12-06 The Eurotherm Committee has chosen Thermal Management of Electronic Systems as the subject of its 29th Seminar at Delft University of Technology the Netherlands 14-16 June 1993 This volume constitutes the proceedings of the Seminar Thermal Management is but one of the several critical topics in the design of electronic systems However as a result of the combined effects of increasing heat fluxes miniaturisation and the striving for zero defects preferably in less time and at a lower cost than before thermal management has become an increasingly tough challenge Therefore it is being increasingly recognised that cooling requirements could eventually hamper the technical progress in miniaturisation It might be argued that we are on the verge of a revolution in thermal management techniques Previously a packaging engineer had no way of predicting the temperatures of critical electronic parts with the required accuracy He or she had to rely on full scale experiments doubtful design rules or worst case estimates This situation is going to be changed in the foreseeable future User friendly software tools the acquisition and integrity of input and output data the badly needed training measures the introduction into a concurrent engineering environment all these items will exert a heavy toll on the flexibility of the electronics industries Fortunately this situation is being realised at the appropriate management levels and the interest in this seminar and the pre-conference tutorials testifies to this assertion
