Radiative Transfer In Scattering And Absorbing Atmospheres:

Radiative Transfer in Scattering and Absorbing Atmospheres Jacqueline Lenoble, 1985 **Radiative Transfer in the Atmosphere and Ocean** Gary E. Thomas, Knut Stamnes, 2002-01-28 Provides a foundation of the theoretical and practical aspects of radiative transfer for the atmospheric oceanic and environmental sciences Atmospheric Radiation James A. Coakley Jr., Ping Yang, 2014-06-26 This textbook is a first look at radiative transfer in planetary atmospheres with a particular focus on the Earth's atmosphere and climate. It covers the basics of the radiative transfer of sunlight treating absorption and scattering and the transfer of the thermal infrared. The examples included show how the solutions of the radiative transfer equation are used to evaluate changes in the Earth's energy budget due to changes in atmospheric composition how these changes lead to climate change and also how remote sensing can be used to probe the thermal structure and composition of planetary atmospheres. The examples motivate students by leading them to a better understanding of and appreciation for the computer generated numerical results. Aimed at upper division undergraduates and beginning graduate students in physics and atmospheric sciences the book is designed to cover the essence of the material in a 10 week course while the material in the optional sections will facilitate its use at the more leisurely pace and in depth focus of a semester course.

Radiative Transfer in the Atmosphere and Ocean Knut Stamnes,Gary E. Thomas,Jakob J. Stamnes,2017-07-13 This new and completely updated edition gives a detailed description of radiative transfer processes at a level accessible to advanced students The volume gives the reader a basic understanding of global warming and enhanced levels of harmful ultraviolet radiation caused by ozone depletion It teaches the basic physics of absorption scattering and emission processes in turbid media such as the atmosphere and ocean using simple semi classical models The radiative transfer equation including multiple scattering is formulated and solved for several prototype problems using both simple approximate and accurate numerical methods In addition the reader has access to a powerful state of the art computational code for simulating radiative transfer processes in coupled atmosphere water systems including snow and ice This computational code can be regarded as a powerful educational aid but also as a research tool that can be applied to solve a variety of research problems in environmental sciences

Short-Wave Solar Radiation in the Earth's Atmosphere Irina N. Melnikova,Alexander V. Vasilyev,2005 Based on data from an experiment which ran for ten years this book summarizes the results of the Atmospheric Physics Department of the St Petersburg University and the Main Geophysical Observatory The processed data now forms a rich dataset of spectral values of radiative characteristics under different atmospheric conditions The analysis of this database clearly shows that the solar radiative absorption in a dusty and cloudy atmosphere is significantly higher than assumed to date Both graduate students of atmospheric sciences as well as scientists

and researchers in the field of meteorology and climatology will find a wealth of new data and information in this monograph

Development of an AOTF-based Hyperspectral Imager for Atmospheric Remote Sensing Emmanuel

Dekemper, 2014-11-07 This work addresses important aspects in the development of a new spaceborne instrument called ALTIUS The imaging capability is first applied to the inversion of atmospheric pressure profiles from the analysis of the apparent flattening of a setting **Planetary Atmospheres**, 1962 *An Introduction to Planetary Atmospheres* Agustin

Manfred Gottwald, Heinrich Bovensmann, 2010-12-08 SCIAMACHY the SCanning Imaging Absorption spectroMeter for Atmospheric CHartographY is a passive sensor for exploring the Earth's atmosphere It is part of the payload of the European Earth Observation mission ENVISAT launched on 1 March 2002 SCIAMACHY observes absorption spectra of molecules from the UV 214 nm to the short wave infrared wavelength range 2386 nm and derives the atmospheric composition trace gases aerosols clouds from these measurements Having meanwhile successfully monitored and explored the Earth's atmosphere for more than 8 years new and exciting insights into the Earth atmosphere system are obtained The provided global data sets do

not only cover greenhouse gases and pollutants in the troposphere or the ozone chemistry in the stratosphere but even reach up to the mesosphere and lower thermosphere. They contribute significantly to atmospheric physics and chemistry as well as climate change research. SCIAMACHY is one of the major current Earth Observation undertakings of Germany. The Netherlands and Belgium accomplished in cooperation with the European Space Agency ESA. Many scientific groups at various institutes in Europe and abroad were and are actively involved in the analysis of the data. This book is a comprehensive summary describing the entire SCIAMACHY mission from the very first ideas to the current results. It illustrates how the measurements are performed, how the trace gas concentrations are derived from the measured spectra, and how the unique data sets are used to improve our understanding of the changing Earth's atmosphere. The targeted readership is not only the existing and potentially new SCIAMACHY data users from undergraduate student level up to researchers new in the fields of atmospheric chemistry and remote sensing but anyone who is keen to learn about SCIAMACHY's efforts to study the atmosphere and its responses to both natural phenomena and anthropogenic effects.
