Introduction to Food Engineering R. Paul Singh, Dennis R. Heldman, 2001-06-29 Food engineering is a required class in food science programs as outlined by the Institute for Food Technologists (IFT). The concepts and applications are also required for professionals in food processing and manufacturing to attain the highest standards of food safety and quality. The third edition of this successful textbook succinctly presents the engineering concepts and unit operations used in food processing in a unique blend of principles with applications. The authors use their many years of teaching to present food engineering concepts in a logical progression that covers the standard course curriculum. Each chapter describes the application of a particular principle followed by the quantitative relationships that define the related processes, solved examples, and problems to test understanding. The subjects the authors have selected to illustrate engineering principles demonstrate the relationship of engineering to the chemistry, microbiology, nutrition, and processing of foods. Topics incorporate both traditional and contemporary food processing operations. **1992 Energy Technology Status Report**, 1992

Microwave/RF Applicators and Probes for Material Heating, Sensing, and Plasma Generation Mehrdad Mehdizadeh, 2009-12-22 Interactions of electromagnetic fields with materials at high frequencies have given rise to a vast array of practical applications in industry, science, medicine, and consumer markets. Applicators or probes, which are the front end of these systems, provide the field that interacts with the material. This book takes an integrated approach to the area of high frequency applicators and probes for material interactions, providing a toolkit for those who design these devices. Particular attention is given to real world applications and the latest developments in the area. Mathematical methods are provided as design tools and are often simplified via curve fitting techniques that are particularly usable by handheld calculators. Useful equations and numerically solved examples using situations encountered in practice are supplied. Above all, this volume is a comprehensive and useful reference where the reader can find design rules and principles of high frequency applicators and probes for material processing and sensing applications. Electronic and electrical R this book provides

practical information for those who actually intend to design a system Features real world and numerically solved examples and curve fitted simple equations to replace complex equations provided in typical texts Author is a voting member of IEEE Standards Association *Poultry Science* ,1996 Vol 5 includes a separately paged special issue dated June 1926
