*River, Coastal and Shoreline Protection*, 1995 *Riprap Design Criteria, Recommended Specifications, and Quality Control* Peter Frederick Lagasse, National Cooperative Highway Research Program, 2006 TRB's National Cooperative Highway Research Program NCHRP Report 568 *Riprap Design Criteria Recommended Specifications and Quality Control* examines design guidelines recommended material specifications and test methods recommended construction specifications and construction inspection and quality control guidelines for riprap for a range of applications including revetment on streams and riverbanks bridge piers and abutments and bridge scour countermeasures such as guide banks and spurs

**River, Coastal and Shoreline Protection** C. R. Thorne, 1995-07-05 RIPRAP is a widely used engineering method for protecting river banks and coastlines from erosion This book studies the fundamental issues and problems concerned with various aspects of this method of erosion control **River, Coastal and Estuarine Morphodynamics. RCEM 2009, Two Volume Set** Carlos Vionnet, Marcelo H. García, E.M. Latrubesse, G.M.E. Perillo, 2018-10-03 Coastal estuarine fluvial and submarine morphodynamics encompass some of the leading processes shaping our planet They stem mainly but not only from the interaction of water in motion and movable sediment boundaries resulting in morphological changes produced by erosion transport and deposition of sediments that generate a variety of landscapes **River and Channel Revetments** Manuela Escameia, 1998-04 Provides information on the types of revetment available and guidance on the choice and design of these systems This manual includes information on revetments that incorporate some form of structural protection and those which combine this protection with vegetation to increase the environmental quality of the systems It is aimed at engineers **Skokomish River Basin Ecosystem Restoration, Mason County, Washington** United States. Office of the Assistant Secretary of the Army (Civil Works), 2016 **Restoration of Puget Sound Rivers** David R. Montgomery, Susan Bolton, Derek B. Booth, Leslie Wall, 2015-12-31 The recent listing of Pacific salmon under the Endangered Species Act has led to substantial interest in the scientific basis for river restoration in the Pacific Northwest Millions of dollars in state and federal funding have been programmed for habitat restoration efforts to stem the decline of salmon populations in the region This volume addresses the need for a solid understanding of fluvial processes and aquatic ecology in order to predict both river and salmonid response to restoration projects In the Pacific Northwest as in most regions of the United States we are still learning about the processes that create habitat and river structure how those processes influence aquatic ecosystems and how to gauge the response of river systems to both land use changes and restoration efforts River systems are still responding to historic changes and degraded habitat may not be restored successfully if natural conditions are not well understood particularly if massive changes in watershed hydrology or other processes are the root cause These issues faced in the development of regional river restoration programs are by no means unique to the Northwest and so the initiation of a regional program of river restoration provides an opportunity to evaluate the state of river restoration in general The

eighteen chapters of Restoration of Puget Sound Rivers presented by the region's experts at a symposium of the Society for Ecological Restoration examine geological and geomorphological controls on river and stream characteristics and dynamics biological aspects of river systems in the region and the application of fluvial geomorphology civil engineering riparian ecology and aquatic ecology in efforts to restore Puget Sound Rivers This volume will be of interest to geomorphologists aquatic biologists civil engineers planners and all those interested in the interface of science and policy in addressing one of the fundamental environmental challenges of the twenty first century

**Analysis and Modelling of River Meandering** Alessandra Crosato, 2008 This thesis examines the morphological changes of non tidal meandering rivers at the spatial scale of several meanders With this purpose a physics based mathematical model MIANDRAS has been developed for the simulation of the medium term to long term evolution of meandering rivers Application to several real rivers shows that MIANDRAS can properly simulate both equilibrium river bed topography and planimetric changes Three models of different complexity can be obtained by applying different degrees of simplification to the equations These models along with experimental tests and field data constitute the tools for several analyses At conditions of initiation of meandering it is found that river bends can migrate upstream and downstream This depends on meander wave length and width to depth ratio irrespective of whether the parameters are in the subresonant or the superresonant range

**River, Coastal and Estuarine Morphodynamics** Gary Parker, Marcelo H. García, 2005-09-29 The proceedings of the 4th Symposium on River Coastal and Estuarine Morphodynamics offers the latest research results concerning quantitative modelling of the interaction of water and sediment and the shapes this interaction makes in rivers watersheds estuaries the coast the continental shelf and the deep sea Morphodynamics is the study of the evolution of landscape and seascape features from small scale to large

**River Mechanics** Pierre Y. Julien, 2018-04-12 Completely updated and with three new chapters this analysis of river dynamics is invaluable for advanced students researchers and practitioners

**Scour Manual** G.J.C.M. Hoffmans, H.J. Verheij, 2021-03-08 Ever since the publication in 1997 the original Scour Manual has helped many practising hydraulic engineers to deal with scour processes near hydraulic structures In recent years new insights such as probabilistic calculations offered new opportunities to design structures more economically These new insights are included in this update of the original Scour Manual which is focussing entirely on current related scour This manual provides the engineer with useful practical methods to calculate the dimensions of scour holes in the pre feasibility and preliminary stages of a project and gives an introduction to the most relevant literature This updated Scour Manual contains guidelines that can be used to solve problems related to scour in engineering practice and also reflects the main results of all research projects in the Netherlands in recent decades The so called Breusers equilibrium method has a central role which can basically be applied to all situations where local scour is expected The method allows to predict the scour depth as a function of time provided that the available knowledge about scour at the specific structure is sufficient For structures with insufficient knowledge

available alternative scour prediction rules are presented The treatment of local scour is classified according to the different types of structures Each type of structure is necessarily schematised to a simple basic layout The main parameters of a structure and the main parts of the flow pattern near a structure are described briefly insofar they are relevant to the description of scour phenomena New scour formulas for the equilibrium scour have been elucidated Evaluating a balance of forces for a control volume it is possible to develop scour equations for different types of flow fields and structures i e jets abutments and bridge piers As many scour problems are still not fully understood attention is paid to the validity ranges and limitations of the formulas as well as to the accuracy of the scour predictions This information can also be used to carry out a risk assessment using a safety philosophy based on a probabilistic analysis or an approach with a safety factor Moreover the information on the strength of soils is extended and aspects are addressed such as scour due to shear failures or flow slides that can progressively damage the bed protection which might lead to the failure of hydraulic structures This updated Scour Manual presents scour prediction methods and deals with practically related scour problems Consultants and contractors were invited to provide case studies of realized projects including the methods that were followed These case studies will help with grasping the concept of scour by the flow of water This manual provides the engineer with the latest knowledge and with case studies that show how to apply the formulas and their limitations

**Environmentally Sensitive Channel- and Bank-protection Measures** John McCullah, Donald H. Gray, National Cooperative Highway Research Program, 2005 TRB's National Cooperative Highway Research Program NCHRP Report 544 Environmentally Sensitive Channel and Bank Protection Measures examines environmentally sensitive channel and bank protection measures and includes recommended design guidelines for their application and a selection system for helping to determine the most appropriate channel and bank protection measure The selection system is presented as an interactive software program entitled Greenbank which can be found on the accompanying CD ROM CRP CD 58 The selection system software CRP CD 58 is available for download in a ZIP format

**Countermeasures to Protect Bridge Abutments from Scour** Brian D. Barkdoll, R. Ettema, Bruce W. Melville, National Cooperative Highway Research Program, 2007 Examines selection criteria and guidelines for the design and construction of countermeasures to protect bridge abutments and approach embankments from scour damage The report explores two common forms of bridge abutments wing wall vertical face with angled walls into the bank and spill through angled face

**Ice Action on Riprap: Small-Scale Tests** Devinder S. Sodhi, 1996 *Geology Applied to Engineering* Terry R. West, Abdul Shakoor, 2018-03-19 *Geology Applied to Engineering* bridges the gap between the two fields through its versatile application of the physical aspects of geology to engineering design and construction The Second Edition elucidates real world practices concerns and issues for today's engineering geologists and geotechnical engineers Both undergraduate and graduate students will benefit from the book's thorough coverage as will professionals involved in assessing sites for engineering projects evaluating construction materials developing water resources and conducting tests using industry

standards West and Shakoor offer expanded coverage of important topics such as slope stability and ground subsidence and significant fields in engineering geology such as highways dams tunnels and rock blasting In order to allow for the diverse backgrounds of geologists and engineers material on the properties of minerals rocks and soil provides a working knowledge of applied geology as a springboard to more comprehensive subjects in engineering Example problems throughout the text demonstrate the practical applications of soil mechanics rock weathering and soils structural geology groundwater and geophysics Thought provoking and challenging exercises supplement core concepts such as determining shear strength and failure conditions calculating the depth needed for borings reading and analyzing maps and constructing stratigraphic cross sections

**Coastal and Ocean Engineering Practice** Young C. Kim, 2012 Successful coastal and ocean engineering projects rely on practical experience with technical tools and knowledge available to the engineer Often problems arise from projects that are too complex for theoretical description which require that engineers exercise sound judgment in addition to reliance on past practical experience This book focuses on the latest technology applied in design and construction effective engineering methodology unique projects and problems design and construction challenges and other lessons learned In addition unique practices in planning design construction maintenance and performance of coastal and ocean projects will be explored

Theoretical Morphodynamics: River Meandering Giovanni Seminara ,Stefano Lanzoni ,Nicoletta Tambroni ,2024-04-05 This monograph discusses the mechanics of Meandering Rivers with the help of the mathematical and modeling tools built up in the previous monograph of the same Authors monograph 1 of the present series After introducing the reader to the ubiquitous character of meandering streams we discuss the hydrodynamics of curved channels with fixed beds and banks Next we extend the analysis to account for the mobile character of the bed and show that it gives rise to the alternate

sequence of riffles and pools that characterize river meanders. Allowing for the erodible character of the river banks then allows to build up a rational theory of meander formation able to explain most of the features observed in nature: meander growth, migration, skewing, multiple loops, cutoffs and meander belts.
