Real Submanifolds In Complex Space And Their Mappings:

Real Submanifolds in Complex Space and Their Mappings (PMS-47) M. Salah Baouendi,Peter Ebenfelt,Linda Preiss Rothschild,2016-06-02 This book presents many of the main developments of the past two decades in the study of real submanifolds in complex space providing crucial background material for researchers and advanced graduate students The techniques in this area borrow from real and complex analysis and partial differential equations as well as from differential algebraic and analytical geometry In turn these latter areas have been enriched over the years by the study of problems in several complex variables addressed here The authors M Salah Baouendi Peter Ebenfelt and Linda Preiss Rothschild include extensive preliminary material to make the book accessible to nonspecialists One of the most important topics that the authors address here is the holomorphic extension of functions and mappings that satisfy the tangential Cauchy Riemann equations on real submanifolds They present the main results in this area with a novel and self contained approach The book also devotes considerable attention to the study of holomorphic mappings between real submanifolds and proves finite determination of such mappings by their jets under some optimal assumptions The authors also give a thorough comparison of the various nondegeneracy conditions for manifolds and mappings and present new geometric interpretations of these conditions Throughout the book Cauchy Riemann vector fields and their orbits play a central role and are presented in a setting that is both general and elementary **Analysis and Geometry in Several Complex Variables** Shiferaw Berhanu,Nordine Mir,Emil J. Straube,2017-01-17 This volume contains the proceedings of the workshop on Analysis and Geometry in Several Complex Variables held from January 4 8 2015 at Texas A M University at Qatar Doha Qatar This volume covers many topics of current interest in several complex variables CR geometry and the related area of overdetermined systems of complex vector fields as well as emerging trends in these areas Papers feature original research on diverse topics such as the rigidity of CR mappings normal forms in CR geometry the d bar Neumann operator asymptotic expansion of the Bergman kernel and hypoellipticity of complex vector fields Also included are two survey articles on complex Brunn Minkowski theory and the regularity of systems of complex vector fields and their associated Laplacians *Geometry of Holomorphic Mappings* Sergey Pinchuk,Rasul Shafikov,Alexandre Sukhov,2023-09-14 This monograph explores the problem of boundary regularity and analytic continuation of holomorphic mappings between domains in complex Euclidean spaces Many important methods and techniques in several complex variables have been developed in connection with these questions and the goal of this book is to introduce the reader to some of these approaches and to demonstrate how they can be used in the context of boundary properties of holomorphic maps The authors present substantial results concerning holomorphic mappings in several complex variables with improved and often simplified proofs Emphasis is placed on geometric methods including the Kobayashi metric the Scaling method Segre varieties and the Reflection principle Geometry of Holomorphic Mappings will provide a valuable resource for PhD students in complex analysis and complex geometry it will
