*Multiprocessor Scheduling for Real-Time Systems* Sanjoy Baruah, Marko Bertogna, Giorgio Buttazzo, 2015-01-02 This book provides a comprehensive overview of both theoretical and pragmatic aspects of resource allocation and scheduling in multiprocessor and multicore hard real time systems The authors derive new abstract models of real time tasks that capture accurately the salient features of real application systems that are to be implemented on multiprocessor platforms and identify rules for mapping application systems onto the most appropriate models New run time multiprocessor scheduling algorithms are presented which are demonstrably better than those currently used both in terms of run time efficiency and tractability of off line analysis Readers will benefit from a new design and analysis framework for multiprocessor real time systems which will translate into a significantly enhanced ability to provide formally verified safety critical real time systems at a significantly lower cost

Soft Real-Time Systems: Predictability vs. Efficiency Giorgio C Buttazzo, Giuseppe Lipari, Luca Abeni, Marco Caccamo, 2006-07-02 Hard real time systems are very predictable but not sufficiently flexible to adapt to dynamic situations They are built under pessimistic assumptions to cope with worst case scenarios so they often waste resources Soft real time systems are built to

reduce resource consumption tolerate overloads and adapt to system changes They are also more suited to novel applications of real time technology such as multimedia systems monitoring apparatuses telecommunication networks mobile robotics virtual reality and interactive computer games This unique monograph provides concrete methods for building flexible predictable soft real time systems in order to optimize resources and reduce costs It is an invaluable reference for developers as well as researchers and students in Computer Science     *Handbook of Real-Time and Embedded Systems* Insup
