Reality And Empathy Physics Mind And Science In The 21st Century:

Reality and Empathy Alex Comfort, 1984-06-30 Once in a century an overview shakes the mold of preconception and makes a world model fall into shape This is such a book absorbing provocative original skeptical and often very funny in spite of formidable scholarship The focus of the book is on the change in self perception which physics might bring about if it were made in some way empathically real to non physicists The common man s existential attitude is a product now of nineteenth century mechanistic models But in pursuing this the author lays out a comprehensive survey of impending changes in the philosophy of science and ranges through physics biology mathematics Jungian psychology and evolutionary theory turning also to look at other non Western scientific world models In the task of reshaping the world model of scientists and others only commitment to the discipline of science will do It can be combined with enough controlled lunacy to bring conventionally self evident ideas of reality into question in mathematics this has always been a winning mixture but it has to produce testable predictions What we are now looking at is the prospect of Jungian physics a physics model which also addresses the image forming mechanism and possibly even the non locality of mind The hard hat model of an objective reality has had to yield to a growing perception that the objective is in form at least a construct what we appear to see is a function of the manner of seeing hardly a new idea to Greek philosophy but with the awkward complication that the cogitating I arises from the structures which it sees and orders Reality and Empathy Alex Comfort, Alex Comfort, M.D., D.Sc., 1984-01-01

The Routledge Companion to Religion and Science James W. Haag, Gregory R. Peterson, Michael L. Spezio, 2012-03-12 The field of religion and science is one of the most exciting and dynamic areas of research today This Companion brings together an outstanding team of scholars to explore the ways in which science intersects with the major religions of the world and religious naturalism The collection provides an overview of the field and also indicates ways in which it is developing Its multicultural breadth and scientific rigor on topics that are and will be compelling issues in the first part of the twenty first century and beyond will be welcomed by students and scholars alike **Beyond Atheism, Beyond God** Philip A. Stahl, 2013-08-19 In his new study *Beyond Atheism Beyond God* author Philip A Stahl uses atheism as a rational stepping stone to arrive at an emergent conception of the universe exposing features that might be described as transcendent He presents an impersonal approach to Being that is devoid of any specific religious overtones or affiliations Each person becomes a quantum based co creator in his or her own right according to physicist Henry Stapp As such we are able to thereby see ourselves and our humanity in a new light as opposed to being merely reactive cogs in a vast mechanical reductionist machine Effectively we emerge as much more than assemblies of molecules This volume the fourth and final entry in Stahls series on atheism seeks to arrive at a transcendent concept of being that also surpasses absolutism and naive or dogmatic deity templates It considers the development of a more realistic cogent and effective ethics and morality less

likely to be exploited by the power mongers or sacred source apologists and it answers the question of whether God exists though not in the way one would normally assume *Margins of Reality* Robert G. Jahn, Brenda J. Dunne, 2009-04

WHAT HAS MODERN SCIENCE SWEPT UNDER THE RUG This pioneering work which sparked intense controversy when it was first published two decades ago suggests that modern science in the name of rigor and objectivity has arbitrarily excluded the role of consciousness in the establishment of physical reality Drawing on the results of their first decade of empirical experimentation and theoretical modeling in their Princeton Engineering Anomalies Research PEAR program the authors reach provocative conclusions about the interaction of human consciousness with physical devices information gathering processes and technological systems The scientific personal and social implications of this revolutionary work are staggering MARGINS OF REALITY is nothing less than a fundamental reevaluation of how the world really works *In and Out of Your Mind* Dale Bick Carlson, 2002 Provides an overview of the world of science and helps teens understand how science affects their lives *Who Said What?* Dale Carlson, 2003 Philosophy and science team up to explain the working of the brain and how teens in particular should understand the secrets of the brain's functioning *Origin and Evolution of the Universe* John Robson, 1987-11-01 Does the universe have the character it has because of design In this collection of essays first presented at a symposium sponsored by the Canadian Institute for Advanced Research and the Royal Society of Canada seventeen scientists and philosophers re-examine the Argument by Design in light of current scientific theories Scientists in such diverse fields as cosmology physics geology biology and psychology provide syntheses of the state of their respective disciplines with regard to questions such as the origin or evolution of the universe and of life the interaction of life and terrestrial environment and verbal communication in prehumans Contributions by philosophers cover such areas as arguments for a designer and the question of whether nature's laws and initial conditions could be viewed as fine-tuned for the production of life Many of the chapters demonstrate the awe-inspiring success of modern science in explaining the universe in terms of fairly straightforward natural laws countering those versions of the design argument which try to find evidence of God's activities in the supposed failures of scientific laws to cover various phenomena *Handbook of Contemporary Behavioral Economics* Morris Altman, 2015-01-30 At a time when both scholars and the public demand explanations and answers to key economic problems that conventional approaches have failed to resolve this groundbreaking handbook of original works by leading behavioral economists offers the first comprehensive articulation of behavioral economics theory Borrowing from the findings of psychologists sociologists political scientists legal scholars and biologists among others behavioral economists find that intelligent individuals often tend not to behave as effectively or efficiently in their economic decisions as long held by conventional wisdom The manner in which individuals actually do behave critically depends on psychological institutional cultural and even biological considerations Handbook of Contemporary Behavioral Economics includes coverage of such critical areas as the Economic Agent Context and Modeling Decision Making

Transcendental Physics Edward R. Close, 2000-05 In this ground breaking work Dr Close goes beyond the question How can we explain consciousness in terms of matter and asks instead Can matter be explained in terms of consciousness The results are astounding Using unimpeachable scientific evidence and logic the author provides proof of the absolute necessity of the existence of consciousness prior to the emergence of the first particle of the physical universe Eliminating the conflicts between relativity and quantum mechanics Transcendental Physics places them in perspective as progressive paradigm shifts leading out of the dead end of dialectic materialism and provides the necessary science for a sweeping shift to a consciousness based reality paradigm Transcendental Physics provides scientific proof of the existence of a non quantum reality a reality that both exceeds and incorporates physical materiality as a subset of Consciousness Going beyond mere theory Dr Close completes this Herculean vision by providing in an appendix new mathematics derived from G Spencer Brown's Laws of Form that allows consciousness to be incorporated into the equations of physics In this book a truly Transcendental Science capable of unifying the physical biological and psychological sciences with the search for spiritual truth in one consistent paradigm is born

Toward a Transpersonal Ecology Warwick Fox, 1995-01-01 In this book I advance an argument concerning the nature of the deep ecology approach to ecophilosophy In order to advance this argument in as thorough a manner as possible I present it within the context of a comprehensive overview of the writings on deep ecology
