Web-Based Education: Learning from Experience Aggarwal, Anil K.,2002-07-01 Successful use of information and communication technologies depends on usable designs that do not require expensive training accommodate the needs of diverse users and are low cost There is a growing demand and increasing pressure for adopting innovative approaches to the design and delivery of education hence the use of online learning also called E learning as a mode of study This is partly due to the increasing number of learners and the limited resources available to meet a wide range of various needs backgrounds expectations skills levels ages abilities and disabilities The advances of new technology and communications WWW Human Computer Interaction and Multimedia have made it possible to reach out to a bigger audience around the globe By focusing on the issues that have impact on the usability of online learning programs and their implementation Usability Evaluation of Online Learning Programs specifically fills in a gap in this area which is particularly invaluable to practitioners **Realizing Complex Integrated Systems** Anthony P. Ambler,John W. Sheppard,2025-02-20 The creation of complex integrated systems is in itself complex It requires immense planning and a large team of people with diverse backgrounds based in dispersed

geographical locations and countries supposedly working to a coordinated schedule and cost The systems engineering task is not new but recent scales most definitely are The world is now capable of designing and manufacturing systems whose complexity was not considered possible 10 years ago While many are trained to think in terms of a complete system where everything is designed and produced by a single project team today such systems involve integrating subsystems and components which are also complex that have been developed by other project teams Inevitably this introduces additional complexities involving elements out of the direct control of the project but which are essential to its overall success In addition to traditional systems engineering topics of hardware and software design testability and manufacturability there are wider issues to be contemplated project planning communication language an issue for international teams units of measure imperial vs metric used across members of the team supply chains pandemics military action and natural disasters legal issues based on place of production and sale the ethics associated with target use and the threat of cyberattack This book is the first attempt to bring many of these issues together to highlight the complexities that need to be considered in modern system design It is neither exhaustive nor comprehensive but it gives pointers to the topics for the reader to follow up on in more detail Handbook of Sustainability Management Christian N.
