Najjar, 2019-08-12 Growing evidence derived from cerebrospinal fluid CSF neuropathological imaging genetic and epidemiological studies link neuroinflammation and immune dysregulation to a subset of individuals with a variety of severe mental disorders SMDs including affective and non affective psychotic disorders Further the recent discoveries of neuronal surface antibodies NSAs in autoimmune encephalitis AE presenting with diverse neuropsychiatric disorders such as psychosis and cognitive decline among many others provides further support to the notion that CNS autoimmunity and neuroinflammation can contribute to the neurobiology of psychiatric disturbances Further these immune mechanisms may contribute to a subset of patients currently diagnosed as having treatment resistant SMDs such as schizophrenia and major depressive disorder Additionally mounting data indicate that various infections can serve as an immunological trigger of aberrant immune responses presumably by causing release of excess neural antigen thereby giving rise to NSAs or aberrant immune cellular responses to give rise to primary or secondary psychiatric disorders such as schizophrenia and those associated with AE respectively Collectively these findings support the mild encephalitis hypothesis of SMD The significant overlap among AE associated psychosis systemic autoimmune disorder associated psychosis and psychotic disorders associated with pathological processes involving inflammation and immune dysregulation has also prompted some authors to adopt the term autoimmune psychosis AP This term reflects that this psychosis subtype is mechanistically linked to complex neuroimmune and inflammatory signalling abnormalities that can be responsive to early immunomodulatory treatment It also suggests that a subset of AP might represent an incomplete or forme fruste subtype of AE presenting with dominant or pure psychiatric symptoms mimicking primary psychiatric illnesses Because data indicate that delayed diagnosis and treatment may lead to permanent sequelae early recognition of AP utilizing neurodiagnostic workup e g CSF analysis neuroimaging and EEG and its early treatment with appropriate immunotherapy are paramount to a meaningful recovery This eBook will provide an overview of the current knowledge and research areas from epidemiology risk factors and diagnosis to the management of these conditions in this rapidly emerging field helping to bridge the gaps in knowledge that currently exist in the disciplines of Psychiatry Neurology and Neuroimmunology

 Contemporary Psychiatry** Dusan Kecmanovic,2017-09-08 The controversies and dilemmas in contemporary psychiatry are
 so numerous and serious that they to a great extent define psychiatry Yet most psychiatrists pay little attention to the field s
 controversies maintaining that talking about controversies tarnishes psychiatry s reputation and them along with it Critics of
 psychiatry use these controversies and dilemmas along with psychiatrists unwillingness to discuss them to undermine
 psychiatry They question the existence of mental disorder and the purpose of psychiatric therapy Kecmanovic undertakes a
 major effort of resolving with science not ideology such dilemmas Although psychiatrists give no thought to the mind body
 relationship their attitude towards this relationship determines their approach to the mentally ill their understanding of the
 origin and nature of the mental disorder and the therapy they think has priority Sometimes psychiatrists implicitly or
 explicitly cite a specific school of philosophy in order to find conceptual support for their particular practice As a result
 psychiatrists do not speak the same language about the same issues Kecmanovic suggests that there can be no dialogue
 without common language opposing views cannot converge without dialogue The behavior of the mentally ill is socially
 jarring This is a major reason why the mentally ill are considered to be a menace They threaten prevailing manners of
 communicating expressing one s thoughts and feelings and the existing meaning of symbols in a given environment Deviance
 of a person with a mental disorder is specific socially perceived as incomprehensible irrational and unpredictable What is
 common to all reactions to the disruptive nature of a mental disorder is the desire to be protected from those with illness in
 other words to put them under control and supervision
