Limnios,M. Nikulin,2012-12-06 Conceiving reliablesystems is a strategic issue for any industrial society Hence reliability has become a discipline at the beginning of the Second World War In fact reliability is a field of reseach common to mathematics operational research informatics graph theory physics and so forth We are concerned here with the mathematical side of reliability of which probability statistics and more specially stochastic processes theory constitute the natural basis US army during the war and later in the US Problems encountered by the and Soviet space programs have led to an awarenessofthe need for reliabilityor more generaly for dependability a general term covering reliability availability security maintainability etc of the systems The paper by W Weibull of 1938 on the strength of materials leading to the distribution that later took his name and the paper by B Epstein and M Sobel of 1951 initiating the use of the exponential distribution as the basic and now most used model for reliability are the founding papers of the field At this time the systems were merely seen as black boxes During the 1960s they began to be considered as the result of the interaction of their elements Appropriate methods were then developed from Shannon s work to the beautiful theory of coherent systems initiated by Z W Birnbaum J D **Recent Advances in Partial Differential Equations, Venice 1996** Peter D. Lax,L. Nirenberg,Renato Spigler,1998 Lax and Nirenberg are two of the most distinguished mathematicians of our times Their work on partial differential equations PDEs over the last half century has dramatically advanced the subject and has profoundly influenced the course of mathematics A huge part of the development in PDEs during this period has either been through their work motivated by it or achieved by their postdocs and students A large number of mathematicians honored these two exceptional scientists in a week long conference in Venice June 1996 on the occasion of their 70th birthdays This volume contains the proceedings of the conference which focused on the modern theory of nonlinear PDEs and their applications Among the topics treated are turbulence kinetic models of a rarefied gas vortex filaments dispersive waves singular limits and blow up solutions conservation laws Hamiltonian systems and others The conference served as a forum for the dissemination of new scientific ideas and discoveries and enhanced scientific communication by bringing together such a large number of scientists working in related fields THe event allowed the international mathematics community to honor two of its outstanding members **Recent Advancements in Graph Theory** N. P. Shrimali,Nita H. Shah,2020-11-09 Graph Theory is a branch of discrete mathematics It has many applications to many different areas of Science and Engineering This book provides the most up to date research findings and applications in Graph Theory This book focuses on the latest research in Graph Theory It provides recent findings that are occurring in the field offers insights on an international and transnational levels identifies the gaps in

Recent Advances In Quantum Monte Carlo Methods - Part Ii William A Lester,Stuart M Rothstein,Shige Tanaka,2002-02-27 This invaluable book consists of 16 chapters written by some of the most notable researchers in the field of quantum Monte Carlo highlighting the advances made since Lester Jr s 1997 monograph with the same title It may be regarded as the proceedings of the Symposium on Advances in Quantum Monte Carlo Methods held during the Pacifichem meeting in December 2000 but the contributions go beyond what was presented there   Recent Advances in Stochastic Modeling and Data Analysis Christos H. Skiadas,2007 This volume presents the most recent applied and methodological issues in stochastic modeling and data analysis The contributions cover various fields such as stochastic processes and applications data analysis methods and techniques Bayesian methods biostatistics econometrics sampling linear and nonlinear models networks and queues survival analysis and time series The volume presents new results with potential for solving real life problems and provides novel methods for solving these problems by analyzing the relevant data The use of recent advances in different fields is emphasized especially new optimization and statistical methods data warehouse data mining and knowledge systems neural computing and bioinformatics Sample Chapter s Chapter 1 An approach to Stochastic Process using Quasi Arithmetic Means 373 KB Contents Stochastic Processes and Models Distributions Insurance Stochastic Modeling for Healthcare Management Markov and Semi Markov Models Parametric Non Parametric Dynamical Systems Forecasting Modeling and Stochastic Modeling Statistical Applications in Socioeconimic Problems Sampling and Optimization Problems Data Mining and Applications Clustering and Classification Applications of Data Analysis Miscellaneous Readership Researchers in probability and statistics stochastics and fuzzy logic   Statistical Paradigms: Recent Advances And Reconciliations Ashis Sengupta,Tapas Samanta,Ayanendranath Basu,2014-10-03 This volume consists of a collection of research articles on classical and emerging Statistical Paradigms parametric non parametric and semi parametric frequentist and Bayesian encompassing both theoretical advances and emerging applications in a variety of scientific disciplines For advances in theory the topics include Bayesian Inference Directional Data Analysis Distribution Theory Econometrics and Multiple Testing Procedures The areas in emerging applications include Bioinformatics Factorial Experiments and Linear Models Hotspot Geoinformatics and Reliability   **Recent Advances in DNS and LES** Doyle Knight,Leonidas Sakell,2012-12-06 Rapid advances in Direct Numerical Simulation DNS and Large Eddy Simulation LES of turbulence provide opportunities for improved prediction of incompressible and compressible turbulent flows The book includes five invited and thirty eight contributed papers presented at the Second AFOSR International Conference on DNS and LES held at Rutgers The State University of New Jersey on June 7 9 1999 A broad range of topics in DNS and LES are presented including new developments in LES modeling numerical algorithms for LES and DNS DNS and LES of reacting

flows and DNS and LES for supersonic and hypersonic boundary layers The book provides a extensive view of the state of the art in DNS and LES **Recent Advances in Structural Engineering** ,2005-02 This book contains state of the art review articles on specific research areas in the civil engineering discipline the areas include geotechnical engineering hydraulics and water resources engineering and structural engineering The articles are written by invited authors who are currently active at the international level in their respective research fields **Recent Advances in Modeling and Forecasting Kaiyu** Saburo Saito,Kenichi Ishibashi,Kosuke Yamashiro,2023-09-08 This book is the first comprehensive presentation of a Kaiyu Markov model with covariates and a multivariate Poisson model with competitive destinations These two models are core techniques when the authors and colleagues conduct their Kaiyu studies The two models are usually used to forecast the effects of specific urban redevelopment on both the number of visitors and consumer shop around or Kaiyu movements Their Kaiyu studies originated from the constructions of a Kaiyu Markov model and the disaggregated hierarchical decision Huff model almost simultaneously around the early 1980s This book retrospectively reviews how these models have evolved from the start to the present state and previews the ongoing efforts to make further extensions of these models The extension of the Huff model started from the disaggregated hierarchical decision Huff model with shop arounds In retrospect the model formulated the consumer s simultaneous choice of destinations as a joint probability The mechanism to determine this joint probability was a recursive conditional probability system Now the Huff model has shifted from joint probability to multivariate frequency Poisson with competitive destinations On the other hand the Kaiyu Markov model started from a descriptive model Because it cannot forecast changes in shop arounds or consumer Kaiyu behaviors the Kaiyu Markov model with covariates was developed in which entrance and shop around choice probabilities are explained by the respective two logit models with covariates such as distances and shop floor areas The noticeable point is that it can explain consumers probability of quitting their shop arounds Thus the model enables one to evaluate the effects of urban revitalization policy that promotes consumers shop arounds or Kaiyu behaviors Furthermore if the Kaiyu Markov model can estimate the actual numbers of flows of consumers shop arounds among shopping sites the corresponding money flows also can be estimated as economic effects This book discusses from scratch the evolution of all these topics Thus this book provides the basics of the Kaiyu Markov model a tutorial for the theory and estimation of the conditional logit model and a chapter serving as a practical research manual for forecasting changes caused by urban development based on consumers Kaiyu behaviors

Differentiable Measures and the Malliavin Calculus Vladimir Igorevich Bogachev,2010-07-21 This book provides the reader with the principal concepts and results related to differential properties of measures on infinite dimensional spaces In the finite dimensional case such properties are described in terms of densities of measures with respect to Lebesgue measure In the infinite dimensional case new phenomena arise For the first time a detailed account is given of the theory of differentiable measures initiated by S V Fomin in the 1960s since then the method has found many various important

applications Differentiable properties are described for diverse concrete classes of measures arising in applications for example Gaussian convex stable Gibbsian and for distributions of random processes Sobolev classes for measures on finite and infinite dimensional spaces are discussed in detail Finally we present the main ideas and results of the Malliavin calculus a powerful method to study smoothness properties of the distributions of nonlinear functionals on infinite dimensional spaces with measures The target readership includes mathematicians and physicists whose research is related to measures on infinite dimensional spaces distributions of random processes and differential equations in infinite dimensional spaces The book includes an extensive bibliography on the subject *Recent Advances and Trends in Nonparametric Statistics* M.G. Akritas,D.N. Politis,2003-10-31 The advent of high speed affordable computers in the last two decades has given a new boost to the nonparametric way of thinking Classical nonparametric procedures such as function smoothing suddenly lost their abstract flavour as they became practically implementable In addition many previously unthinkable possibilities became mainstream prime examples include the bootstrap and resampling methods wavelets and nonlinear smoothers graphical methods data mining bioinformatics as well as the more recent algorithmic approaches such as bagging and boosting This volume is a collection of short articles most of which having a review component describing the state of the art of Nonparametric Statistics at the beginning of a new millennium Key features algorithic approaches wavelets and nonlinear smoothers graphical methods and data mining biostatistics and bioinformatics bagging and boosting support vector machines resampling methods **Optimal Control and Partial Differential Equations** José Luis Menaldi,Edmundo Rofman,Agnes Sulem,2001 This volume contains more than sixty invited papers of international wellknown scientists in the fields where Alain Bensoussan s contributions have been particularly important filtering and control of stochastic systems variationnal problems applications to economy and finance numerical analysis In particular the extended texts of the lectures of Professors Jens Frehse Hitashi Ishii Jacques Louis Lions Sanjoy Mitter Umberto Mosco Bernt Oksendal George Papanicolaou A Shiryaev given in the Conference held in Paris on December 4th 2000 in honor of Professor Alain Bensoussan are included
