Pain as Human Experience Mary-Jo DelVecchio Good, Paul Brodwin, Byron J. Good, 1994-11-14 With case studies drawn from anthropological investigations of chronic pain sufferers and pain clinics in the northeastern United States the authors attempt to invent new ways of writing about this language resistant human experience Focused on substantive issues in the study of chronic pain their work explores the great divide between the culturally shaped language of suffering and the traditional language of medical and psychological theorizing They argue that the representation of experience in local social worlds is a central challenge to the human sciences and to ethnographic writing and that meeting that challenge is also crucial to the refiguring of pain in medical discourse and health policy debates Anthropologists scholars from the medical social sciences and humanities and many general readers will be interested in *Pain as Human Experience* In addition behavioral medicine and pain specialists psychiatrists and primary care practitioners will find much that is relevant to their work in this book Jacket **Current Catalog** National Library of Medicine (U.S.), 1983 First multi year cumulation covers six years 1965 70 Handbook of Pain and Aging David I. Mostofsky, Jacob Lomranz, 2013-11-11 From time to time professional journals and edited volumes devote some of their pages to considerations of pain and aging as they occur among the aged in different cultures and populations One starts from several reasonable assumptions among them that aging per se is not a disease process yet the risk and frequency of disease processes increase with ongoing years The physical body's functioning and ability to restore all forms of damage and insult slow down the immune system becomes compromised and the slow growing pathologies reach their critical mass in the later years The psychological body also becomes weaker with unfulfilled promises and expectations and with tragedies that visit individuals and families and the prospect that whatever worlds remain to be conquered will most certainly not be met with success in the rapidly passing days and years that can only culminate in death Despair and depression coupled with infirmity and sensory and or motor inefficiency aggravate both the threshold and the tolerance for discomfort and synergistically collaborate to perpetuate a vicious cycle in which the one may mask the other Although the clinician is armed with the latest advances in medicine and pharmacology significant improvement continues to elude her or him The geriatric specialist all too familiar with such realities usually can offer little else than a hortative to learn to live with it but the powers and effectiveness of learning itself have declined **Pain - Its Neurosurgical Management** H. Kravynbühl, P. E. Maspe, W. H. Sweet, 1977-04-04 National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1971 Recent Advances in the Management of Pain Costantino Benedetti, C. Richard Chapman, Guido Moricca, 1984 **"Camp Pain"** Jean E. Jackson, 2011-06-07 Pain is the most frequent cause of disability in America And pain specialists estimate that as many as thirty to sixty million Americans suffer from

chronic pain Chronic pain is a complex phenomenon often extremely difficult to treat and surprisingly difficult to define Just as medical literature in general neglects the experience of illness so the clinical literature on pain neglects the experience of pain Camp Pain takes an approach different from most studies of chronic pain which are typically written from a medical or social perspective Based on a year s fieldwork in a pain treatment center this book focuses on patients perspectives on their experiences of pain what these experiences mean to them and how this meaning is socially constructed Jackson explores the psychological burden imposed on many sufferers when they are judged not to have real pain and by harsh moral judgments that sufferers are weak malingerers or responsible in some way for their pain Jackson also looks at the ways in which severe pain erodes and destroys personal identity studying in particular the role of language While keeping her focus on patients experiences Jackson explores Western concepts of disease health mind and body assumptions about cause and effect and notions of shame guilt and stigma Camp Pain does not attempt to resolve the uncertainties and misperceptions associated with pain but rather aims at enhancing our understanding of the wider implications of chronic pain by focusing on the sufferers themselves

Clinical Behavioral Medicine I.E. Wickramasekera,1988-03-31 This book is an effort to integrate some clinical observations theoretical concepts and promising clinical procedures that relate psychological variables to physiological variables My primary emphasis is on what psychological and behavioral concepts and procedures are most likely to enable us to influence physiological functions The book covers questions that have fascinated me and with which I have struggled in daily clinical practice What types of people are most at risk for physical disorders or dysfunctions Why do some people present psychosocial conflicts somatically and others behaviorally What is the placebo effect and how does it work How do you arrange the conditions to alter maladaptive belief systems that contribute to psychopathology and pathophysiology Do beliefs have biological consequences When I was in private clinical practice and even today in my medical school clinical practice situation I set aside one day each week to puzzle over the theoretical questions that my clinical experience generates Often isolating these underlying theoretical questions provides guidance into the most relevant empirical literature I have found that this weekly ritual which I started in private practice many years ago appears to increase my clinical efficacy or at least makes clinical work more exciting I find the unexamined clinical practice hard to endure Kurt Lewin once said There is nothing so practical as a good theory
