*Recent Developments in Insect Neurohormones* M. Raabe, 2012-12-06 The most striking fact revealed by investigations of insect neurohormones is that insects are as well supplied with neurohormones as mammals since neurohormones regulate not only the functioning of the endocrine glands prothoracic gland and corpora allata but also most physiological processes Our knowledge of neurohormones developed originally from anatomocytological investigations and experimental studies Today accurate bio assays have been devised for studying both in vivo and in vitro physiological processes and RIA determination has yielded knowledge of titer modifications of humoral factors Much is also known about neurohormone purification and several neurohormones have even been identified in different species Immunocytochemistry has made it possible to demonstrate in their origin and release sites the presence of insect neurohormones whose structure has been elucidated Moreover the presence of vertebrate and invertebrate neuropeptides has been demonstrated in insects As regards biogenic amines methods of detection have been greatly refined and it is now possible to identify the cell bodies and axons of the main biogenic amines Other new methods such as cobalt chloride impregnation or Lucifer yellow staining have revealed the axonal pathways and the location of particular neurons The mechanisms of action of neurohormones have been investigated in several cases and the results of these investigations will be related in the chapters which follow

**Advances in Insect Physiology**, 2009-10-14 *Advances in Insect Physiology* publishes volumes containing important comprehensive and in depth reviews on all aspects of insect physiology It is an essential reference source for invertebrate physiologists and neurobiologists entomologists zoologists and insect biochemists First published in 1963 the serial is now edited by Steven Simpson and Jerome Casas to provide an international perspective This volume is a thematic volume focusing on locust phase polyphenism Contributions from the leading researchers in entomology Discusses the physiological diversity in insects Includes in depth reviews with valuable information for a variety of entomology disciplines

[Recent Advances in Insect Endocrine Research](#), 1995

[Insect Neuroendocrines](#) V.B. Awasthi, 2005-04-01 The aim of the author has been to present an account of the neuroendocrine system of insects the super importance of which is well established and also to provide information as far as possible directly through the ultrastructural illustrations Besides an account of some of the hormonally controlled phenomena of vital significance is given It is hoped that the theoretical account and a large number of ultrastructural illustrations of some of the prominent pioneer authors included in the book will provide ample information to the post graduate students and research scholars of insect neuroendocrinology as well as to those engaged in carrying out researches on comparative endocrinology insect ethology cell biology and developmental biology in various universities and acquaint them well with almost all the components of the neuroendocrine system in the active inactive and various developmental stages alongwith ultrastructural changes occurring in the cells and their organelles that are associated with specific functions I do hope that the book will stimulate the readers and serve as a text book cum basic research monograph

on the subject The book also contains a list of selected bibliography for a detailed study **Insect Neurochemistry and Neurophysiology** Alexej B. Borkovec, 2019-08-08 This book represents proceedings from ICINN 1993 and comprises papers on nerve function neurotransmitters ion channels second messengers and neuropeptides By using a variety of techniques combining aspects of neurophysiology pharmacology immunology peptide separation and sequencing or molecular biology it has become possible to study systems in greater detail and complexity than before **Agricultural Insect Pests and Their Control, 2nd Ed.** V.B. Awasthi, 2017-03-01 This book has been mainly written keeping in view the requirements of the students of Agricultural Entomology of various Universities The book provides a brief account on the structure function development and metamorphosis and a comprehensive account on almost all the methods of pest control The nature of damage caused by the important insect pests of crops their life histories and control have been described It is hoped that the students of Agricultural Entomology will find the book extremely useful The book is also useful to the Plant Protection Departments and similar Institutions The book will also be useful to those who are preparing for competitive examinations conducted by various central and state Government agencies for recruitment Every attempt has been made to provide necessary information from the point of view of students of Agricultural Entomology which is not available in other books
