G. Hiremath, 2003 The book contains articles covering a wide range of subjects of environmental science The terrestrial section has articles on air pollution solid waste ground water regime western ghats eastern ghats mining medicinal plants ethnobotany role of pesticides agriculture microbial sensors wetlands and ornithological studies The marine environmental aspect such as mangroves application of remote sensing harmful algal blooms bio remediation sustainable management of molluscan resources benthic fauna deep seabed mining and bio fouling have been dealt in the marine environment section Moloka'i Fieldtrip Guidebook Susan Allene Cochran, Lucile M. Roberts, Kevin R. Evans, 2002 **Coral Reef Remote Sensing** James A. Goodman, Samuel J. Purkis, Stuart R. Phinn, 2013-04-18 Remote sensing stands as the defining technology in our ability to monitor coral reefs as well as their biophysical properties and associated processes at regional to global scales With overwhelming evidence that much of Earth's reefs are in decline our need for large scale repeatable assessments of reefs has never been so great Fortunately the last two decades have seen a rapid expansion in the ability for remote sensing to map and monitor the coral reef ecosystem its overlying water column and surrounding environment Remote sensing is now a fundamental tool for the mapping monitoring and management of coral reef ecosystems Remote sensing offers repeatable quantitative assessments of habitat and environmental characteristics over spatially extensive areas As the multi disciplinary field of coral reef remote sensing continues to mature results demonstrate that the techniques and capabilities continue to improve New developments allow reef assessments and mapping to be performed with higher accuracy across greater spatial areas and with greater temporal frequency The increased level of information that remote sensing now makes available also allows more complex scientific questions to be addressed As defined for this book remote sensing includes the vast array of geospatial data collected from land water ship airborne and satellite platforms The book is organized by technology including visible and infrared sensing using photographic multispectral and hyperspectral instruments active sensing using light detection and ranging LiDAR acoustic sensing using ship autonomous underwater vehicle AUV and in water platforms and thermal and radar instruments Emphasis and Audience This book serves multiple roles It offers an overview of the current state of the art technologies for reef mapping provides detailed technical information for coral reef remote sensing specialists imparts insight on the scientific questions that can be tackled using this technology and also includes a foundation for those new to reef remote sensing The individual sections of the book include introductory overviews of four main types of remotely sensed data used to study coral reefs followed by specific examples demonstrating practical applications of the different technologies being discussed Guidelines for selecting the most appropriate sensor for particular applications are provided

including an overview of how to utilize remote sensing data as an effective tool in science and management The text is richly illustrated with examples of each sensing technology applied to a range of scientific monitoring and management questions in reefs around the world As such the book is broadly accessible to a general audience as well as students managers remote sensing specialists and anyone else working with coral reef ecosystems

Economic Geology of Natural Gas Hydrate Michael D. Max, Arthur H. Johnson, William P. Dillon, 2006-07-09 This book is a companion to Natural Gas Hydrate in Oceanic and Permafrost Environments Max 2000 2003 which is the first book on gas hydrate in this series Although other gases can naturally form clathrate hydrates referred to after as hydrate we are concerned here only with hydrocarbon gases that form hydrates The most important of these natural gases is methane Whereas the first book is a general introduction to the subject of natural gas hydrate this book focuses on

the geology and geochemical controls of gas hydrate development and on gas extraction from naturally occurring hydrocarbon hydrates This is the first broad treatment of gas hydrate as a natural resource within an economic geological framework This book is written mainly to stand alone for brevity and to minimize duplication Information in Max 2000 2003 should also be consulted for completeness Hydrate is a type of clathrate Sloan 1998 that is formed from a cage structure of water molecules in which gas molecules occupying void sites within the cages stabilize the structure through van der Waals or hydrogen bonding

Remote Sensing of Aquatic Coastal Ecosystem Processes Laurie L. Richardson, Ellsworth F. LeDrew, 2006-02-02 The aquatic coastal zone is one of the most challenging targets for environmental remote sensing Properties such as bottom reflectance spectrally diverse suspended sediments and phytoplankton communities diverse benthic communities and transient events that affect surface reflectance coastal blooms runoff etc all combine to produce an optical complexity not seen in terrestrial or open ocean systems Despite this complexity remote sensing is proving to be an invaluable tool for Case 2 waters This book presents recent advances in coastal remote sensing with an emphasis on applied science and management Case studies of the operational use of remote sensing in ecosystem studies monitoring and interfacing remote sensing science management are presented Spectral signatures of phytoplankton and suspended sediments are discussed in detail with accompanying discussion of why blue water Case 1 algorithms cannot be applied to Case 2 waters Audience This book is targeted for scientists and managers interested in using remote sensing in the study or management of aquatic coastal environments With only limited discussion of optics and theory presented in the book such researchers might benefit from the detailed presentations of aquatic spectral signatures and to operational management issues While not specifically written for remote sensing scientists it will prove to be a useful reference for this community for the current status of aquatic coastal remote sensing
