This unique book explains in simple terms the commonly occurring chemical constituents of medicinal plants. The major classes of plant constituents such as phenols, terpenes and polysaccharides are described both in terms of their chemical structures and their pharmacological activities. Identifying specific chemical compounds provides insights into traditional and clinical use of these herbs as well as potential for adverse reactions. Features include:

- Over 100 diagrams of chemical structures
- References to original research studies and clinical trials
- References to plants commonly used throughout Europe, North America and Australasia

Written by an experienced herbal practitioner, *The Constituents of Medicinal Plants* seriously challenges any suggestion that herbal medicine remains untested and unproven, including as it does hundreds of references to original research studies and trials. Designed as an undergraduate text, the first edition of this book became an essential desktop reference for health practitioners, lecturers, researchers, producers and anyone with an interest in how medicinal herbs work. This edition has been extensively revised to incorporate up to date research and additional sections including an expanded introduction to plant molecular structures and is destined to become a classic in the literature of herbal medicine.
