Receptors And Recognition:

Receptors and recognition Pedro Cuatrecasas, Melvyn F. Greaves, 1976 Receptors and Recognition P. Cuatrecasas, 1978 **Receptors and Recognition** P. Cuatrecasas, M. F. Greaves, 2014-09-01 Receptors and Recognition Pedro Cuatrecasas, Melvyn F. Greaves, 1977 *Receptors and Recognition* P. Cuatrecasas, M. F. Greaves, 2013-11-21 This new series is concerned with intercellular communication and recognition. It is now widely appreciated that these processes play a crucial role in virtually all biological systems and functions. These encompass fertilisation, embryonic development, infectious interactions, the activity of the nervous system, the regulation of growth and development by hormones and the immune response to foreign or non self antigens. Historically, as described in the first review in this volume, the general concept of cell-associated receptors as the molecular entity primarily responsible for the specificity of signal recognition arose independently in the fields of immunology, pharmacology and developmental biology. From an early stage, the analogy between cellular recognition and the discriminatory activity of antibodies and enzymes was emphasised. A vital conceptual advance, expressed most clearly by Linus Pauling and Paul Weiss, was the idea that non-covalent molecular interactions of proteins in particular were responsible for biological specificity. In general, in the last decade several major advances have led to a new level of understanding of the molecular basis of cellular recognition. In several systems, in particular with neurotransmitters, hormones and antigens, it is possible to directly demonstrate the existence of receptors associated in each case with the cell surface. These studies have been paralleled by equally important insights into the general structure and organisation of cell membranes and the possible ways in which signals arriving from the outside can be transduced across the cell surface membrane to induce or regulate the cell's programmed responses. **Receptors and Recognition** P. CUATRECASAS AND M. F. GREAVES, 2014-01-23 **Receptors and Recognition**, 1980 **Receptors and Recognition** Pedro Cuatrecasas, 1978 **Receptors and Recognition** Pedro Cuatrecasas, M. F. Greaves, 1976 Receptors and recognition Geoffrey ed Burnstock, 1981 The Receptors P. Michael Conn, 2014-05-10 The Receptors Volume IV deals with receptors for intracellular hormones, estrogen and sex steroids, as well as for dopamine, cholecystikinin and corticotropin. The role of surface recognition receptors in disease is also discussed, along with receptors for plant auxin action and auxin transport. Comprised of 11 chapters, this volume begins with a detailed account of the adrenergic receptor-coupled adenylate cyclase and the reconstitution of the functional interactions of its various purified components. The discussion then turns to the mechanism of action of steroid and thyroid hormones and how abnormalities in their receptors lead to disease, nuclear location of estrogen receptors and the biochemistry of the fungal sex steroid receptors, as well as the use of *Achlya* as a model system for the study of the mechanism of action of steroid hormones in general. Subsequent chapters focus on dopamine receptors, cholecystikinin receptor, corticotropin receptors and the search for receptors that mediate sweetness. The book concludes with an analysis of endocrine receptors on lymphocytes and the integration of endocrine and immune

systems with emphasis on large granular lymphocytes This monograph will be a valuable resource for students and practitioners in fields ranging from cell biology and biochemistry to physiology endocrinology and pharmacology

Receptors in the Nervous System Abel Lajtha, 2013-06-29 A major advance in the biological sciences in the past decade has been the biochemical identification of cell membrane receptors The existence of receptor substances on the surface of cells that recognize and bind to extracellular molecules was proposed at the beginning of the century by the pharmacologist and immunologist Paul Ehrlich and the physiologist J N Langley Since then receptors have been found to play an important role in numerous physiological and pathological processes Over the years many attempts have been made to physically isolate and chemically characterize receptors but because of the receptors extremely low concentration and membrane localization these efforts have met with limited success Yet despite the failure to characterize receptor substances the concept of the presence of such molecules has had considerable heuristic value Using pharmacological physiological and immunologic approaches researchers have identified several specific receptors e g α and adrenergic nicotinic and muscarinic cholinergic and histaminergic With the characterization of various types of receptors on cell membranes many drugs were developed that proved to be experimentally and therapeutically useful It was only in the early 1970s that methods for the specific measurement chemical characterization and physical isolation of cell membrane receptors were developed These advances were made possible by the availability of ligands with high specific radioactivity that retained their biological activity and of experimental procedures that differentiated between specific and non specific binding of ligands

Molecular Basis of NK Cell Recognition and Function L. Moretta, 1996 Natural killer NK cells have been the subject of intense investigation Only in recent years however could the molecular mechanisms by which they lyse tumor or virus infected cells but spare normal cells be elucidated NK cells express different specialized receptors NK R specific for major histocompatibility complex MHC class I molecules These MHC molecules exert an inhibitory effect on NK cells i e lack of expression of one or more MHC class I alleles a common event in tumor or virus infected cells leads to NK mediated target cell lysis Recently NK type receptors have also been identified in a subset of T lymphocytes MHC NK R interaction causes inhibition of T cell activation and functions an observation which suggests a role for these receptors in the negative control of T cell responses This volume offers a complete and updated review of the signal transduction and functions of NK cells as well as their roles in transplantation anti tumor response and infectious diseases Written by experienced investigators who have contributed significantly to progress in the field this collection of reviews will be a valuable resource for basic and clinical immunologists hematologists oncologists and virologists

Receptor Chemistry Towards the Third Millennium M. Gianella, G. Marucci, W. Quaglia, U. Gulini, 2000-05-31 Receptor Chemistry Towards the Third Millennium is the result of papers presented at the 12th Camerino Noordwijkerhout Symposium held in Camerino Italy in September 1999 Although much is known about the way ligands interact with receptors which have now been isolated characterized and cloned many

aspects still remain to be explored In particular differentiation into distinct subpopulations and the multiplicity of transduction processes offer more specific targets in the search for new drugs This book will be of interest to medicinal chemists pharmacologists biochemists and neurologists and will also be a valuable source of reference for medical students and postgraduate students in related fields

Antigen Processing and Recognition James McCluskey,1991-09-03 This book provides a state of the art review of the processing presentation and subsequent recognition of antigens by T cells Topics discussed include the structure of MHC molecules the nature and specificity of human class II molecule interactions with peptide antigens the class II invariant chain antigen processing and presentation by class I MHC molecules the biology of antigen processing and the presentation and role of accessory molecules in T cell recognition Other chapters feature discussions about the T cell allorecognition of MHC molecules the recognition of minor antigens and the concept of superantigens Color plates demonstrate the three dimensional structure of MHC molecules and peptide antigen interaction with MHC molecules Diagrams illustrate antigen presentation pathways T cell receptor MHC interaction and accessory molecule interactions Antigen Processing and Recognition will be a valuable addition to the libraries of students and teachers of immunology as well as cell biologists who are looking for a unified view of this rapidly expanding subject

Receptors Clare Stanford,Roger W. Horton,2001 Given the number of exciting developments across the whole spectrum of receptor research in recent years the editors have not restricted themselves to one particular approach or class of receptors Thus the studies within range from G protein coupled surface receptors to the delivery of antisense DNA inside living cell systems A distinguished team of contributors cover these diverse areas identifying any difficulties likely to be encountered and appropriate steps to overcome them Wherever appropriate the theoretical basis of each topic is explained first so that the results emerging from the practical procedures can be fully understood Anyone with an interest in receptor structure and function will find this book an invaluable resource

Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis Padma V. Devarajan,Prajakta Dandekar,Anisha A. D'Souza,2019-11-09 This book elaborates on drug delivery targeting via intracellular delivery specifically through the Receptor Mediated Endocytosis RME approach due to the involvement of cellular receptors in various grave diseases Targeted delivery relies on two basic approaches passive and active targeting While passive targeting approaches have shown great promise the improved selectivity achieved with active targeting approaches has resulted in significantly higher efficacy Interestingly there are numerous strategies for active targeting many of which are already highlighted in Targeted Drug Delivery Concepts and Applications Nevertheless an exciting and practical strategy for active targeting which could enable high intracellular delivery is through exploitation of RME Cells in the body express receptors to enable various physiological and biochemical processes As a result many of these receptors are overexpressed in pathological conditions or newer receptors expressed due to defective cellular functioning RME is based on exploitation of

such receptors to achieve intracellular delivery While targeted delivery can have manifold applications in this book we focus on two major and challenging therapeutic areas i Cancer and ii Infectious Diseases Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis discusses the major receptors that are useful for targeted delivery for these afflictions A major section of this book is dedicated to details regarding their occurrence and location the recognition domain of the receptor structure activity relationship of substrate ligand for selective binding ligands explored antagonists for ligand binding and relevance of these aspects for therapy of cancer and infectious diseases These facets are elucidated with the help of specific examples from academic research and also emphasize commercial products wherever relevant In vitro cellular models relied on for assessing receptor mediated cellular targeting and in vivo models depicting clinical efficacy are focused on in a separate section Finally we briefly discuss the regulatory and toxicity issues that may be associated specifically with the RME approach of intracellular drug delivery Immunity Anthony L. DeFranco, Richard M.

Locksley, Miranda Robertson, 2007 An understanding of the immune system is central to the understanding of how the body interacts with its surroundings Presenting an insight into this biological system this book leads students through both innate and adaptive immunity how infection is detected and how the cells of the immune system interact to generate a response

Advances in Cancer Research George F. Vande Woude, George Klein, 2011-07-29 The Advances in Cancer Research series provides invaluable information on the exciting and fast moving field of cancer research This volume presents outstanding and original reviews on a variety of topics including NY ESO 1 review of an immunogenic tumor antigen Order disorder death lessons from a superorganism Control of differentiation in progression of epithelial tumors Cancer vaccines preclinical studies and novel strategies Clinical results of vaccine therapy for cancer learning from history for improving the future Immunodominance and immunodomination critical factors in developing effective CD8 T cell based cancer vaccines NK cell receptors as tools in cancer immunotherapy Innate immune recognition and suppression of tumors Inhibitors of the HSP90 molecular chaperone current status
