Mainstreaming Renewable Energy In The 21st Century:

Mainstreaming Renewable Energy in the 21st Century Janet Laughlin Sawin, 2004 Experience shows that renewable energy can advance dramatically worldwide if governments enact the right mix of policies summary Energy Autonomy Hermann Scheer, 2012-05-04 For 200 years industrial civilization has relied on the combustion of abundant and cheap carbon fuels But continued reliance has had perilous consequences On the one hand there is the insecurity of relying on the world's most unstable region the Middle East compounded by the imminence of peak oil growing scarcity and mounting prices On the other the potentially cataclysmic consequences of continuing to burn fossil fuels as the evidence of accelerating climate change shows Yet there is a solution to make the transition to renewable sources of energy and distributed decentralized energy generation It is a model that has been proven technologically commercially and politically as Scheer comprehensively demonstrates here The alternative of a return to nuclear power again being widely advocated he shows to be compromised and illusory The advantages of renewable energy are so clear and so overwhelming that resistance to them needs diagnosis which Scheer also provides showing why and how entrenched interests and one dimensional structures of thinking oppose the transition and what must be done to overcome these obstacles The new book from the award winning author of *THE SOLAR ECONOMY* and *A SOLAR MANIFESTO* demonstrates why the transition to renewable energy is essential and how it can be done *The New Geographies of Energy* Karl Zimmerer, 2013-09-13 *The New Geographies of Energy* Assessment and Analysis of Critical Landscapes is a pioneering collection of new geographic scholarship It examines such vitally important research topics as energy dilemmas of the United States large trends and patterns of energy consumption including China's role peak oil energy poverty and ethanol and other renewable energy sourcing The book offers advances in key emerging areas of energy research each distinguished in the following sections i geographic approaches to energy modeling and assessment ii fossil fuel landscapes iii the landscapes of renewable energy iv landscapes of energy consumption and v an overview of the new geographies of energy Karl Zimmerer *Annals Nature Society and Energy* issue editor and an essay on America's oil dependency Vaclav Smil renowned energy geographer In addition there is a specially commissioned book review This book was published as a special issue of the *Annals of the Association of American Geographers* *Climate Change* A. Barrie Pittock, 2013-11-26 It is widely accepted in the scientific community that climate change is a reality and that changes are happening with increasing rapidity In this second edition leading climate researcher Barrie Pittock revisits the effects that global warming is having on our planet in light of ever evolving scientific research Presenting all sides of the arguments about the science and possible remedies Pittock examines the latest analyses of climate change such as new and alarming observations regarding Arctic sea ice the recently published IPCC Fourth Assessment Report and the policies of the new Australian Government and how they affect the implementation of climate change initiatives New material focuses on massive investments in large scale renewables such as the kind being taken up in California as well as many smaller scale

activities in individual homes and businesses which are being driven by both regulatory and market mechanisms The book includes extensive endnotes with links to ongoing and updated information as well as some new illustrations While the message is clear that climate change is here and in some areas might already be having disastrous effects there is still hope for the future and the ideas presented here will inspire people to take action Climate Change The Science Impacts and Solutions is an important reference for students in environmental or social sciences policy makers and people who are genuinely concerned about the future of our environment
