Real-Time Digital Signal Processing from MATLAB® to C with the TMS320C6x DSPs, Second Edition Thad B. Welch, Cameron H.G.

Wright, Michael G. Morrow, 2011-12-22 From the Foreword There are many good textbooks today to teach digital signal processing but most of them are content to teach the theory and perhaps some MATLAB simulations This book has taken a bold step forward It not only presents the theory it reinforces it with simulations and then it shows us how to actually use the results in real time applications This last step is not a trivial step and that is why so many books and courses present only theory and simulations With the combined expertise of the three authors of this text the reader can step into the real time world of applications with a text that presents an accessible path Delores M Etter Texas Instruments Distinguished Chair in Electrical Engineering and Executive Director Caruth Institute for Engineering Education Southern Methodist University Dallas Texas USA Mastering practical application of real time digital signal processing DSP remains one of the most challenging and time consuming pursuits in the field It is even more difficult without a resource to bridge the gap between theory and practice Filling that void Real Time Digital Signal Processing from MATLAB to C with the TMS320C6x DSPs Second Edition is organized in three sections that cover enduring fundamentals and present practical projects and invaluable appendices This updated edition gives readers hands on experience in real time DSP using a practical step by step framework that also incorporates demonstrations exercises and problems coupled with brief overviews of applicable theory and MATLAB application Engineers educators and students rely on this book for precise simplified instruction on use of real time DSP applications The book s software supports the latest high performance hardware including the powerful inexpensive and versatile OMAP L138 Experimenter Kit and other development boards Incorporating readers valuable

feedback and suggestions this installment covers additional topics such as PN sequences and more advanced real time DSP projects including higher order digital communications projects making it even more valuable as a learning tool

Reconstruction-Free Compressive Vision for Surveillance Applications Henry Braun, Pavan Turaga, Andreas Spanias, Sameeksha Katoch, Suren Jayasuriya, Cihan Tepedelenlioglu, 2022-05-31 Compressed sensing CS allows signals and images to be reliably inferred from undersampled measurements Exploiting CS allows the creation of new types of high performance sensors including infrared cameras and magnetic resonance imaging systems Advances in computer vision and deep learning have enabled new applications of automated systems In this book we introduce reconstruction free compressive vision where image processing and computer vision algorithms are embedded directly in the compressive domain without the need for first reconstructing the measurements into images or video Reconstruction of CS images is computationally expensive and adds to system complexity Therefore reconstruction free compressive vision is an appealing alternative particularly for power aware systems and bandwidth limited applications that do not have on board post processing computational capabilities Engineers must balance maintaining algorithm performance while minimizing both the number of measurements needed and the computational requirements of the algorithms Our study explores the intersection of compressed sensing and computer vision with the focus on applications in surveillance and autonomous navigation Other applications are also discussed at the end and a comprehensive list of references including survey papers are given for further reading

Linear Algebra for Pattern Processing Kenichi Kanatani, 2022-06-01 Linear algebra is one of the most basic foundations of a wide range of scientific domains and most textbooks of linear algebra are written by

mathematicians However this book is specifically intended to students and researchers of pattern information processing analyzing signals such as images and exploring computer vision and computer graphics applications The author himself is a researcher of this domain Such pattern information processing deals with a large amount of data which are represented by high dimensional vectors and matrices There the role of linear algebra is not merely numerical computation of large scale vectors and matrices In fact data processing is usually accompanied with geometric interpretation For example we can think of one data set being orthogonal to another and define a distance between them or invoke geometric relationships such as projecting some data onto some space Such geometric concepts not only help us mentally visualize abstract high dimensional spaces in intuitive terms but also lead us to find what kind of processing is appropriate for what kind of goals First we take up the concept of projection of linear spaces and describe spectral decomposition singular value decomposition and pseudoinverse in terms of projection As their applications we discuss least squares solutions of simultaneous linear equations and covariance matrices of probability distributions of vector random variables that are not necessarily positive definite We also discuss fitting subspaces to point data and factorizing matrices in high dimensions in relation to motion image analysis Finally we introduce a computer vision application of reconstructing the 3D location of a point from three camera views to illustrate the role of linear algebra in dealing with data with noise This book is expected to help students and researchers of pattern information processing deepen the geometric understanding of linear algebra
