Leondes,2003 This is an invaluable five volume reference on the very broad and highly significant subject of computer aided and integrated manufacturing systems It is a set of distinctly titled and well harmonized volumes by leading experts on the international scene The techniques and technologies used in computer aided and integrated manufacturing systems have produced and will no doubt continue to produce major annual improvements in productivity which is defined as the goods and services produced from each hour of work This publication deals particularly with more effective utilization of labor and capital especially information technology systems Together the five volumes treat comprehensively the major techniques and technologies that are involved *UML for Real* Luciano Lavagno,Grant Martin,Bran V. Selic,2007-05-08 The complexity of most real time and embedded systems often exceeds that of other types of systems since in addition to the usual spectrum of problems inherent in software they need to deal with the complexities of the physical world That world as the proverbial Mr Murphy tells us is an unpredictable and often unfriendly place Consequently there is a very strong motivation to investigate and apply advanced design methods and technologies that could simplify and improve the reliability of real time software design and implementation As a result from the first versions of UML issued in the mid 1990 s designers of embedded and real time systems have taken to UML with vigour and enthusiasm However the dream of a complete model driven design flow from specification through automated optimised code generation has been difficult to realise without some key improvements in UML semantics and syntax specifically targeted to the real time systems problem With the enhancements in UML that have been proposed and are near standardisation with UML 2 0 many of these improvements have been made In the Spring of 2003 adoption of a formalised UML 2 0 specification by the members of the Object Management Group OMG seems very close It is therefore very appropriate to review the status of UML as a set of notations for embedded real time systems both the state of the art and best practices achieved up to this time with UML of previous generations and where the changes embodied in the 2 **Monthly Catalog of United States Government Publications** ,1995 CONCUR '97 Antoni Mazurkiewicz,1997-06-11 This book constitutes the refereed

Hybrid Predictive Control for Dynamic Transport Problems Alfredo Nunez, Doris Saez, Cristián E. Cortés, 2012-10-04 Hybrid Predictive Control for Dynamic Transport Problems develops methods for the design of predictive control strategies for nonlinear dynamic hybrid discrete continuous variable systems The methodology is designed for real time applications particularly the study of dynamic transport systems Operational and service policies are considered as well as cost reduction The control structure is based on a sound definition of the key variables and their evolution A flexible objective function able to capture the predictive behaviour of the system variables is described Coupled with efficient algorithms mainly drawn from area of computational intelligence this is shown to optimize performance indices for real time applications The framework of the proposed predictive control methodology is generic and being able to solve nonlinear mixed integer optimization problems dynamically is readily extendable to other industrial processes The main topics of this book are hybrid predictive control HPC design based on evolutionary multiobjective optimization EMO HPC based on EMO for dial a ride systems and HPC based on EMO for operational decisions in public transport systems Hybrid Predictive Control for Dynamic Transport Problems is a comprehensive analysis of HPC and its application to dynamic transport systems Introductory material on evolutionary algorithms is presented in summary in an appendix The text will be of interest to control and transport engineers working on the operational optimization of transport systems and to academic researchers working with hybrid systems The potential applications of the generic methods presented here to other process fields will make the book of interest to a wider group of researchers scientists and graduate students working in other control related disciplines

Algebraic Methodology and Software Technology Teodor Rus,2000-05-03 The AMAST movement was initiated in 1989 with the First International Conference on Algebraic Methodology and Software Technology AMAST held on May 21 23 in Iowa City Iowa and aimed at setting the development of software technology on a mathematical basis The virtue of the software technology envisioned by AMAST is the capability to produce software that has the following properties a it is correct and its correctness can be proved mathematically b it is safe such that it can be used in the implementation of critical systems c it is portable i e it is independent of computing platforms and language generations and d it is evolutionary i e it is self adaptable and evolves with the problem domain Ten years later a myriad of workshops conferences and research programs that share the goals of the AMAST movement have occurred This can be taken as proof that the AMAST vision is right However often the myriad of workshops conferences and research programs lack the clear objectives and the coordination of their goals towards the software technology envisioned by AMAST This can be taken as a proof that AMAST is still necessary
