**Real-time Systems** M. Joseph, Mathai Joseph, 1996 This text provides an account of real time systems The presentation makes use of recent research demonstrating the effectiveness and applicability of mathematically based methods for real time system design Each chapter focuses on a particular technique and examples help reinforce the theory

**The SPIN Verification System** Jean-Charles Grégoire, Gerard J. Holzmann, Doron A. Peled, 1997 What is SPIN SPIN is a general tool for the specification and formal verification of software for distributed systems It has been used to detect design errors in a wide range of applications such as abstract distributed algorithms data communications protocols operating systems code and telephone switching code The verifier can check for basic correctness properties such as absence of deadlock and race conditions logical completeness or unwarranted assumptions about the relative speeds of processes It can also check for more subtle system dependent correctness properties expressed in the syntax of Linear time Temporal Logic LTL The tool translates LTL formulae automatically into automata representations which can be used in an efficient on the fly verifications procedure This DIMACS volume presents the papers contributed to the second international workshop that was held on the SPIN verification system at Rutgers University in August 1996 The work covers theoretical and foundational studies of formal verifications empirical studies of the effectiveness of different types of algorithms significant practical applications of the SPIN verifier and discussions of extensions and revisions of the basic code This text will be of interest to those working in applications

**Mathematics of Program Construction** Roland Backhouse, Jose Nuno Oliveira, 2006-12-30 This volume contains the proceedings of MPC 2000 the fifth international conference on Mathematics of Program Construction This series of conferences aims to promote the development of mathematical principles and techniques that are demonstrably useful and usable in the process of constructing computer programs whether implemented in hardware or software The focus is on techniques that combine precision with concision enabling programs to be constructed by formal calculation Within this theme the scope of the series is very diverse including programming methodology program specification and transformation programming paradigms programming calculi and programming language semantics The quality of the papers submitted to the conference was in general very high However the number of submissions has decreased compared to the previous conferences in the series Each paper was refereed by at least five and often more committee members In order to maintain the high standards of the conference the committee took a stringent view on quality this has meant that in some cases a paper was rejected even though there was a basis for a good conference or journal paper but the submitted paper did not meet the committee's

required standards In a few cases a good paper was rejected on the grounds that it did not fit within the scope of the conference

**Fundamental Approaches to Software Engineering** Jean-Pierre Finance, 2004-01-27 ETAPS 99 is the second instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprises several conferences FOSSACS FASE ESOP CC TACAS four satellite workshops CMCS AS WAGA CoFI seven invited lectures two invited tutorials and six contributed tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

**Formal Methods and Models for System Design** Rajesh Gupta,Paul Le Guernic,Sandeep Kumar Shukla,Jean-Pierre Talpin,2004-10-01 Perhaps nothing characterizes the inherent heterogeneity in embedded systems than the ability to choose between hardware and software implementations of a given system function Indeed most embedded systems at their core represent a careful division and design of hardware and software parts of the system To do this task effectively models and methods are necessary functionality to capture application behavior needs and system implementation constraints Formal modeling can be valuable in addressing these tasks As with most engineering domains co design practice defines the state of the it seeks to add new capabilities in system conceptualization model transformation optimization and implementation These advances particularly those related to synthesis and verification tasks directly depend upon formal understanding of system behavior and performance measures Current practice in system modeling relies upon exploiting high level programming frameworks such as SystemC Esterel to capture design at increasingly higher levels of abstraction and attempts to reduce the system implementation task While raising the abstraction levels for design and verification tasks to be really useful these approaches must also provide for reuse adaptation of the existing intellectual property IP blocks

Yang,2005-11-25 Dependable Computing EDCC-4 Fabrizio Grandoni,2003-08-02 It was with great pleasure that on behalf of the entire organizing committee I welcomed participants to EDCC 4 the Fourth European Dependable Computing Conference held for the first time in France The fourth issue of EDCC carried on the traditions established by the previous conferences in this series EDCC 1 was held in Berlin Germany in October 1994 EDCC 2 in Taormina Italy in October 1996 and EDCC 3 in Prague Czech Republic in September 1999 EDCC evolved from a merger of two other conference series at the moment when the Iron Curtain fell One of these known as the International Conference on Fault Tolerant Computing Systems

was organized during the period 1982-1991 by the German Technical Interest Group Fault Tolerant Computing Systems. The other series known as the International Conference on Fault Tolerant Systems and Diagnostics was organized during the period 1975-1990 in the former Czechoslovakia, Poland, Bulgaria and the former GDR. The composition of the EDCC steering committee and the organizing committees of the successive issues of the conference have mirrored the East-West unification character of the conference series. The EDCC conference is becoming a unique meeting point for researchers and practitioners from all over the world in the field of Dependable Systems. It is organized by the SEE Working Group Dependable Computing in France, the GI/ITG/GMA Technical Committee on Dependability and Fault Tolerance in Germany and the AICA Working Group Dependability of Computer Systems in Italy. Furthermore, committees of several global professional organizations such as IEEE and IFIP support the conference.

**Parallel Computing Technologies** Victor Malyshev, 2003-09-09. The PaCT 2003 Parallel Computing Technologies conference was a four-day conference held in Nizhni Novgorod on September 15-19, 2003. This was the 7th international conference of the PaCT series organized in Russia every odd year. The first conference PaCT 91 was held in Novosibirsk Akademgorodok, September 7-11, 1991. The next PaCT conferences were held in Obninsk near Moscow, 30 August-4 September 1993; St. Petersburg, September 12-15, 1995; Yaroslavl, September 9-12, 1997; Pushkin near St. Petersburg, September 6-10, 1999; and Akademgorodok, Novosibirsk, September 3-7, 2001. The PaCT proceedings are published by Springer Verlag in the LNCS series. PaCT 2003 was jointly organized by the Institute of Computational Mathematics and Mathematical Geophysics of the Russian Academy of Sciences, Novosibirsk, and the State University of Nizhni Novgorod. The purpose of the conference was to bring together scientists working with theory, architectures, software, hardware, and solutions of large-scale problems in order to provide integrated discussions on Parallel Computing Technologies. The conference attracted about 100 participants from around the world. Authors from 23 countries submitted 78 papers. Of those submitted, 38 papers were selected for the conference as regular ones; there were also 4 invited papers. In addition, a number of posters were presented. All the papers were internationally reviewed by at least three referees. As usual, a demo session was organized for the participants. Many thanks to our sponsors: the Russian Academy of Sciences, the Russian Fund for Basic Research, the Russian State Committee of Higher Education, IBM, and Intel. Intel Laboratory in Nizhni Novgorod for their financial support. The organizers highly appreciate the help of the Association Antenne Provence, France.
