Colloidal Active Matter Francesc Sagués Mestre, 2022-10-07. What do bird flocks, bacterial swarms, cell tissues, and cytoskeletal fluids have in common? They are all examples of active matter. This book explores how scientists in various disciplines, from physics to biology, have collated a solid corpus of experimental designs and theories during the last two decades to decipher active systems. The book addresses from a multidisciplinary viewpoint the field of active matter at a colloidal scale. Concepts, experiments, and theoretical models are put side by side to fully illuminate the subtleties of active systems. A large variety of subjects, from microswimmers or driven colloids to self-organized active fluids, are analysed within a unified perspective. Generic collective effects of self-propelled or driven colloids, such as motility-induced flocking and new paradigms such as the celebrated concept of active nematics in reconstituted protein-based fluids, are discussed using well-known experimental scenarios and recognized theories. Topics are covered with rigor and in a self-consistent way, reaching both practitioners and newcomers to the field. The diversity of topics and conceptual challenges in active matter have long hampered the chance to explore the field with a general perspective. This monograph, the first single-authored title on active matter, is intended to fill this gap by bridging disparate experimental and theoretical interests from colloidal soft matter to cell biophysics.

Threshold Concepts within the Disciplines, 2008-01-01. *Threshold Concepts within the Disciplines* brings together leading writers from various disciplines and national contexts in an important and readable volume for all those concerned with teaching and learning in higher education. The foundational principle of threshold concepts is that there are in each discipline conceptual gateways or portals that must be negotiated to arrive at

important new understandings In crossing the portal transformation occurs both in knowledge and subjectivity Such transformation involves troublesome knowledge a key concern for contributors to this book who identify threshold concepts in their own fields and suggest how to deal with them Part One extends and enhances the threshold concept framework containing chapters that articulate its qualities its links to other social theories of learning and other traditions in educational research Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including computing engineering biology design modern languages education and economics In the many empirical case studies educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts Other chapters emphasise the equally important being and becoming dimension of learning Part Three suggests pedagogic directions for those at the centre of the education project with contributions focusing on the socialisation of academics and their continuing quest to be effective teachers The book will be of interest to disciplinary teachers educational researchers and educational developers It also is of relevance to issues in quality assurance and professional accreditation

Matter of Life, 1996-10 **Everything Always No Matter What** A. F. Cordova, 2025-07-18 **Everything Always No Matter What** is a book that proposes a relatively unexamined yet probable solution to the ever growing problem of divorce from teachings of Jesus that have been largely overlooked by the church and society After laying out the details and implications of these teachings this book goes on to examine divorce prevention through the lens of these teachings and explores theological grids that have caused these solutions to get overlooked or dismissed because of their incompatibility with more widely accepted traditions in the church Do International Corruption Metrics Matter? Omar E.

Hawthorne, 2015-10-08 Corruption often seen as the main hindrance to development and growth in many societies has led to greater demand for accountability and transparency in how governments conduct their businesses This text examines the impact of Transparency International's Corruption Perceptions Index and whether or not the CPI and hence TI matter It explores three areas the world's political and economic responses and Jamaica's policy responses to the CPI Jamaica is selected for a case study due to its high CPI rating from TI Jamaica is a country that has strong anti corruption laws but nonetheless sees its CPI ranking worsen almost yearly Taking into consideration the importance scholars and policymakers give to corruption's effect on development the findings show that the CPI the most cited corruption index does not change the behavior of world's political and economic policymakers Although the index is published yearly there is no measured change as it regards political and economic policymakers Nonetheless Jamaican policymakers pay significant attention to their performance on TI's CPI Transparency International's CPI is used as the authoritative tool to assess countries corruption perceptions scores by both international governments and several international agencies The use and reference of TI's CPI does not translate as the main factor in regards to the increase and or decrease of aid flow Surprisingly there was no evidence that the CPI affected the credit rating and or investment flow into Jamaica It did indicate however that TI's CPI is reflective of the global market perceptions of Jamaica's economy Research shows that the index does change policy responses in Jamaica as government officials across varying agencies pay attention to the index and the progression and or worsening of the country's score *Slow Narrative and Nonhuman Materialities* Marco Caracciolo, 2022-03 2024 Barbara Perkins and George Perkins Prize *Slow Narrative and Nonhuman Materialities* investigates how the experience of slowness in contemporary narrative practices can create a vision of interconnectedness between human communities and the nonhuman world Here slowness is not a matter of measurable time but a transformative experience for audiences of contemporary narratives engaging with the ecological crisis While climate change is a scientific abstraction the imagination of slowness turns it into a deeply embodied and affective experience Marco Caracciolo explores the value of slowness in dialogue with a

wide range of narratives in various media from prose fiction to comic books to video games He argues that we need patience and an eye for complex patterns in order to recognize the multiple threads that link human communities and the slow moving processes of climate and geological history Decelerating attention offers important insight into human societies relations with the nonhuman materialities of Earth s physical landscapes ecosystems and atmosphere Caracciolo centers the experiential effects of narrative and offers a range of theoretically grounded readings that complement the formal language of narrative theory These close readings demonstrate that slowness is not a matter of measurable time but a thickening of attention that reveals the deeply multithreaded nature of reality The importance of this realization cannot be overstated through an investment in the here and now of experience slow narrative can help us manage the uncertainty of living in an era marked by dramatically shifting climate patterns
