Transients of Modern Power Electronics Hua Bai,Chris Mi,2011-07-05 In high power high voltage electronics systems a strategy to manage short timescale energy imbalances is fundamental to the system reliability Without a theoretical framework harmful local convergence of energy can affect the dynamic process of transformation transmission and storage which create an unreliable system With an original approach that encourages understanding of both macroscopic and microscopic factors the authors offer a solution They demonstrate the essential theory and methodology for the design modeling and prototyping of modern power electronics converters to create highly effective systems Current applications such as renewable energy systems and hybrid electric vehicles are discussed in detail by the authors Key features offers a logical guide that is widely applicable to power electronics across power supplies renewable energy systems and many other areas analyses the short scale nano micro second transient phenomena and the transient processes in nearly all major timescales from device switching processes at the nanoscale level to thermal and mechanical processes at second level explores transient causes and shows how to correct them by changing the control algorithm or peripheral circuit includes two case studies on power electronics in hybrid electric vehicles and renewable energy systems Practitioners in major power electronic companies will benefit from this reference especially design engineers aiming for optimal system performance It will also be of value to faculty staff and graduate students specializing in power electronics within academia

Applications of Nonlinear Dynamics Visarath In,Patrick Longhini,Antonio Palacios,2009-02-11 The eld of applied nonlinear dynamics has attracted scientists and engineers across many different disciplines to develop innovative ideas and methods to study c plex behavior exhibited by relatively simple systems Examples

include population dynamics uidization processes applied optics stochastic resonance locking and ightformations lasers andmechanicalandelectricaloscillators Acommontheme among these and many other examples is the underlying universal laws of nonl ear science that govern the behavior in space and time of a given system These laws are universal in the sense that they transcend the model speci c features of a system and so they can be readily applied to explain and predict the behavior of a wide ranging phenomena natural and arti cial ones Thus the emphasis in the past decades has been in explaining nonlinear phenomena with signi cantly less att tion paid to exploiting the rich behavior of nonlinear systems to design and fabricate new devices that can operate more ef ciently Recently there has been a series of meetings on topics such as Experimental Chaos Neural Coding and Stochastic Resonance which have brought together many researchers in the eld of nonlinear dynamics to discuss mainly theoretical ideas that may have the potential for further implementation In contrast the goal of the 2007 ICAND International Conference on Applied Nonlinear Dynamics was focused more sharply on the implementation of theoretical ideas into actual vices and systems

Modern Electrical Drives H. Bülent Ertan,M. Yildirim Üçtug,Ron Colyer,Alfio Consoli,2013-06-29 Electrical drives lie at the heart of most industrial processes and make a major contribution to the comfort and high quality products we all take for granted They provide the controller power needed at all levels from megawatts in cement production to milliwatts in wrist watches Other examples are legion from the domestic kitchen to public utilities The modern electrical drive is a complex item comprising a controller a static converter and an electrical motor Some can be programmed by the user Some can communicate with other drives Semiconductor switches have improved intelligent power modules have been introduced all of which means that control techniques can be used now that were unimaginable a decade ago Nor has the motor side stood still high energy permanent magnets semiconductor switched reluctance motors silicon micromotor technology and soft magnetic materials produced by powder technology are all revolutionising the industry But the electric drive is an enabling technology so the revolution is rippling throughout the whole of industry
