Astronomy with the Naked Eye Garrett Putnam Serviss, 1908 [How We See the Sky](#) Thomas Hockey, 2024-05-31 Gazing up at the heavens from our backyards or a nearby field most of us see an undifferentiated mess of stars if that is we can see anything at all through the glow of light pollution Today's casual observer knows far less about the sky than did our ancestors who depended on the sun and the moon to tell them the time and on the stars to guide them through the seas Nowadays we don't need the sky which is good because we've made it far less accessible hiding it behind the skyscrapers and the excessive artificial light of our cities How We See the Sky gives us back our knowledge of the sky offering a fascinating overview of what can be seen there without the aid of a telescope Thomas Hockey begins by scanning the horizon explaining how the visible universe rotates through this horizon as night turns to day and season to season Subsequent chapters explore the sun's and moon's respective motions through the celestial globe as well as the appearance of solstices eclipses and planets and how these are accounted for in different kinds of calendars In every chapter Hockey introduces the common vocabulary of today's astronomers uses examples past and present to explain them and provides conceptual tools to help newcomers understand the topics he discusses Packed with illustrations and enlivened by historical anecdotes and literary references How We See the Sky reacquaints us with the wonders to be found in our own backyards

Naked-eye Astronomy Patrick Moore, 1966 **Astronomy With the Naked Eye** Garrett Putnam Serviss, 2015-06-11 Excerpt from Astronomy With the Naked Eye A New Geography of the Heavens With Descriptions and Charts of Constellations Stars and Planets The specific things undertaken in this book are First the presentation of a set of star charts accompanying and illustrating the text and containing the constellation figures so that the reader may see those strange forms that the imaginations of men for thousands of years have drawn in the sky The charts also contain all the stars that have received distinctive names and with these all the other stars that the unaided eye readily perceives The sixth magnitude stars are visible to ordinarily good eyes but they are inconspicuous The charts are reductions from Heis's Atlas Celestis A chart of the

southern sky has been added to cover the constellations not visible from our latitudes Second the march of the constellations across the sky resulting from the annual revolution of the earth in its orbit is followed from month to month and they are presented in the text according to the times of their successive arrivals near the meridian the north and south line of the sky About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Naked-Eye Astronomy Thomas Hockey, 2025-10-29 In this textbook the author brings back some of the old astronomy but viewed through the imaginary lens of huge telescopes and orbiting observatories He teaches us what we can see in the sky without any instrument at all with the only pre requisite of access to a dark sky We learn about lunar solar eclipses and how contemporary cultures and ancient ancestors around the world discovered the sky

Discover the Stars Richard Berry, 1987-12-13 An accessible informative guide to identifying constellations and other incredible features of the sky whether you're hiking camping or stargazing from your backyard Discover the Stars leads you on a tour of all the stars and constellations visible with the naked eye and introduces you to deep sky objects that can be seen with binoculars or a simple telescope The tour is conducted by the editor of Astronomy magazine Richard Berry whose two color computer plotted sky maps and clear instructions make stargazing fun and productive from your first night out The heart of Discover the Stars is two sections of big beautiful sky maps and charts The first section features twelve maps that show the entire sky overhead as it appears during each month of the year These outline all the constellations visible anywhere in the Northern Hemisphere and the accompanying text reveals the rich

ancient mythology that surrounds the star groups The second section is made up of twenty three star charts that depict smaller regions of the sky in great detail These charts give the names of key stars and lead you to fascinating features such as stars with unusual colors double stars variable stars nebulae and galaxies Separate chapters cover basics such as how the stars move through the sky how to find your way around the moon and the planets making an astronomer s flashlight and choosing and using a telescope all in terms that are easy to grasp and remember Discover the Stars is the perfect introduction to the heavens simple enough to be useful if you re just starting out but packed with enough information to keep you learning and enjoying the stars for years to come **Astronomy with the Naked Eye** Garrett Putman
