Radiotherapy for Non-Malignant Disorders Michael Heinrich Seegenschmiedt,Hans-Bruno Makoski,Klaus-Rüdiger Trott,Luther W. Brady,2009-04-15 Non malignant or benign diseases can be successfully treated using ionizing radiation technologies It was first proposed in 1898 by Sokoloff who reported the analgesic effects of radiotherapy for painful rheumatoid arthritis Since then the use of these techniques for painful muscle skeletal diseases has gained acceptance particularly in Europe but is still carried out actively in the United States Non malignant diseases that are amenable to radiotherapy can be classified as inflammatory degenerative hyperproliferative functional or other disorders However the

topographic and morphologic considerations are more relevant Even though radiation therapy for benign diseases has not been pursued actively since the 1950s more recent interest has dictated that it can be a very effective treatment modality The use of radiotherapy can be justified for invasive and aggressive growth such as that seen with desmoids for cosmetic deformations and functional loss as seen with keloids or endocrine orbitopathy or for life threatening complications such as hepatic hemangiomas or juvenile angiofibromas that occur in children or adolescents Many of the non malignant diseases can have a major and lasting effect on quality of life by causing pain or other serious symptoms particularly when other methods of treatment are unavailable have failed or may induce more side effects It is not generally the first choice of therapy in these non malignant diseases but it is acceptable as defined The book edited by Seegenschmiedt et al

Radiology of Peripheral Vascular Diseases Eberhard Zeitler, 2000 This volume provides a comprehensive account of the use of modern imaging procedures for the diagnosis of arterial and venous diseases Each imaging modality is separately considered and applications in individual diseases are then explained with the aid of excellent illustrations In addition vascular interventions such as balloon angioplasty local thrombolysis and stent implantation are discussed and appraised Special attention is devoted to the problem of radiation burden for patients The authors are all recognized experts in angiology phlebology and interventional radiology
