Radio Interface System Planning for GSM/GPRS/UMTS Jukka Lempiäinen, Matti Manninen, 2001-10-31 This broadly applicable book introduces radio system planning emphasizing theoretical and practical details for the planning of GSM GPRS and UMTS mobile networks It explains the key planning parameters for these systems and describes the common tasks in radio system planning

Radio Interface System Planning for GSM/GPRS/UMTS Jukka Lempiäinen, Matti Manninen, 2007-05-08 Radio network system planning is a comprehensive optimisation task where different planning targets coverage capacity and quality have a direct influence on each other and where optimised solution is a compromise of these planning areas In order to find out the cost effective and high quality radio network plan the well known theoretical details have to be bound with practical radio planning issues like planning phases and planning parameters At the same time the long term network evolution paths and the possible changes of the radio propagation environment have to be well understood Radio Interface System Planning for GSM GPRS UMTS introduces the radio system planning where these theoretical and practical details have both been emphasized and then utilized for the planning of GSM GPRS and UMTS mobile networks The key planning parameters for these systems are explained and the typical values for power budget various margins gains and losses and frequency reuse are given Also the book describes the common tasks in radio system planning The planning methods and phases introduced in the book can also be applied to other mobile communication systems

UMTS Radio Network Planning, Optimization and QoS Management Jukka Lempiäinen, Matti Manninen, 2007-05-08 In cellular networks a new generation of CDMA or WCDMA based networks will start operations in most countries in the near future The standardized WCDMA technology generates new challenges in radio network planning optimization and QoS management because of the dynamic nature of its radio interface and various new services and different network operating modes Moreover new and modified radio planning phases as well as new field measurements and emphasized QoS management are needed when UMTS networks are designed and optimized Hence a practical UMTS planning process must be defined in detail from dimensioning to optimization tasks This book follows the UMTS planning process It is organized in three parts Part I UMTS configuration planning Part II UMTS topology planning and Part III UMTS network functionality The first chapter in Part I introduces the UMTS and UTRAN systems and radio network planning strategy and defines a planning process for UMTS In Chapter 2 the UMTS planning process is covered and a detailed description of the UMTS power budget is given with planning threshold examples provided
