Radioprotectors Edward A. Bump, Kamal Malaker, 2021-12-24 It is essential to minimize damage to normal tissues during radiation therapy and many strategies have been employed in finding the best methods for radioprotection This book integrates chemical biological and clinical perspectives on these strategies and developments providing a comprehensive treatise It emphasizes new concepts in radioprotection aiming to inspire further basic science and clinical progress in radioprotector research Radioprotectors Chemical Biological and Clinical Perspectives includes the following topics Early research on radioprotectors WR 2721 an aminothiols prodrug as a radioprotector New results with naturally occurring thiols Nitroxides as effective radioprotectors in vitro and in vivo Radioprotection observed with radical scavengers or antioxidants Bone marrow radioprotection with cytokines and biological modifiers Multiple mechanisms of altering radiation response by eicosanoids Vascular response to radiation and the importance of vascular damage to normal tissue Modifiers of radiation induced apoptosis Survey of clinical trials with radioprotectors Radiation biologists and oncologists cancer researchers and toxicologists will benefit from the findings discussed and strategies for future research **Anticarcinogenesis and**

Radiation Protection Peter Cerutti, 2012-12-06 This book is based on the invited and contributed papers presented at the 2nd International Conference on Anticarcinogenesis and Radiation Protection held at the National Bureau of Standards Gaithersburg Maryland USA on March 8 12 1987 The conference documented developments that have taken place in areas that were addressed during the first conference in 1982 A number of new topics such as biological response modifiers were included because of their emerging relevance to anticarcinogenesis and radiation protection The organization of the material in this book does not follow the conference program rather we have attempted to provide a different sequence for didactic reasons The aim of the conference which is reflected in this book was to promote further development of mechanistic approaches to cancer prevention and treatment based on recent progress in molecular biology and free radical chemistry At the basis of carcinogenesis lie changes in the dynamics of growth and differentiation of specific cell subpopulations in the target tissue These changes are brought about by selective toxicity and modulation of gene expression that are induced by xenobiotic carcinogens and affected by physiological and genetic factors The book deals with oxidative stress and molecular damage caused by radiation and chemical pro oxidants and their role in carcinogenesis and it discusses mechanisms of deregulation of the expression of oncogenes and other genes involved in carcinogenic initiation and promotion

Anticarcinogenesis and Radiation Protection 2 O.F. Nygaard, A.C. Upton, 2012-12-06 The dramatic decrease in the incidence of stomach cancer in industrialized countries during the past 50 years which is yet to be fully explained and the observation that carcinogenesis in laboratory animals can be inhibited by antioxidants retinoids and caloric restriction among other influences challenge us to press on in the search for practical means to prevent cancer It is in relation to this goal that

the studies summarized in this book have special significance This book is based on the invited and contributed papers presented at the Third International Conference on Anticarcinogenesis and Radiation Protection held on October 15-21 1989 in Dubrovnik Yugoslavia They cover a broad range of investigations into the mechanisms and inhibition of carcinogenesis In keeping with recent advances in our understanding of the importance of oncogenes and tumor suppressor genes in carcinogenesis many of the reports focus on mutations and related changes at the level of DNA At the same time however other reports deal with nutritional immunological endocrinological and epidemiological aspects In all the various reports address carcinogenesis and its inhibition at virtually every level of biological organization Included in this compendium are timely reviews of diverse and promising research strategies for cancer prevention as pursued by investigators in different parts of the world The Organizers of the Conference are grateful to the many scientists who have contributed to the volume as well as to the sponsors of the Conference without whose generous support this book would not have been possible

Biochemical Modulation of Anticancer Agents: Experimental and Clinical Approaches Frederick A. Valeriote, L.O. Baker, 2012-12-06 Biochemical Modulation at the present time defines an area of study in which the intracellular metabolism of a given anti cancer agent is modulated usually by a noncytotoxic agent or a cytotoxic agent at sufficiently low dosage to make it non cytotoxic in order to either increase the effectiveness of the particular agent against tumor cells or decrease its cytotoxicity against normal cells The major focus of modulation has been the agents 5 fluorouracil FUra arabinofuranosylcytosine ara C methotrexate MTX and a few alkylating agents The major thrust of the studies has been to increase the flow of the anticancer agent along the pathway responsible for the formation of the cytotoxic species for example FUra to FUTP or ara C to ara CTP While in most cases the application of research results to clinical trials does not require the subsequent expertise of the laboratory researchers application of biochemical modulatory schemes to clinical protocols necessitate a dramatic break with the past procedures As shown in the laboratory clinical loop below close collaboration between the laboratory and clinical investigator is essential While the laboratory REDEFINE TECHNOLOGY TESTS OR QUESTIONS FOR FURTHER THERAPEUTIC ADVANCE CLINICAL EXPERIMENTAL PROTOCOL LABORATORY RESEARCH STUDIES DEFINE AND TEST APPROPRIATE SCIENTIFIC PARAMETERS results define rationally based regimens it is essential that the clinical protocols contain the requirement that clinical material either tumor or normal tissues be sampled to determine whether the biochemical modulation being proposed is in fact being accomplished

Oxidants, Antioxidants And Free Radicals Steven Baskin, Harry Salem, 2017-11-01 This volume collates articles investigating antioxidant oxidant and free radical research It examines the role of such research in health and disease particularly with respect to developing greater understanding about the many interactions between oxidants and antioxidants and how such substances may act as natural protectants and or natural toxicants **Cellular Antioxidant Defense**

Pharmacology of the Skin II, 2012-12-06 The recent interest in the pharmacology of the skin and the treatment of its diseases has come about for two reasons The first is a realisation that many aspects of pharmacology can be studied as easily in human skin as in animal models where they may be more relevant to human physiology and disease Examples of this are the action of various vasoactive agents and the isolation of mediators of inflammation after UV irradiation and antigen induced dermatitis The second reason is the fortuitous realisation that a pharmacological approach to the treatment of skin disease need not always await the full elucidation of aetiology and mechanism For example whilst the argument continued unresolved as to whether the pilo sebaceous infection which constitutes acne was due to a blocked duct or to a simple increase in sebum production 13 cis retinoic acid was found quite by chance totally to ablate the disease again whilst cyclosporin fresh from its triumphs in organ transplantation has been found able to suppress the rash of psoriasis it has resuscitated the debate on aetiology We are therefore entering a new era in which the pharmacology and clinical pharmacology of skin are being studied as a fascinating new way of exploring questions of human physiology and pharmacology as well as for the development and study of new drugs use of which will improve disease control and at the same time help to define pathological mechanisms

Prostaglandin Inhibitors in Tumor Immunology and Immunotherapy Jules E. Harris, Donald P. Braun, Kenning M. Anderson, 2024-12-06 This book provides an updated overview of eicosanoid metabolism It also presents a timely discussion of eicosanoid metabolism in the process of tumor cell metastasis in chemoprotection and radioprotection associated with cancer therapy and in cell differentiation The book focuses on the role

of eicosanoids in the immunology of malignant disease This includes how various immune cell populations in cancer are affected by the secretion and action of various eicosanoids and metabolites of eicosanoids and how these processes may be affected by various pharmacological manipulations and interventions to augment anti tumor immunity Head and neck cancer is covered in great detail to illustrate a cancer in humans where these considerations are particularly relevant This important volume demonstrates that the principal factor in cancer patient immunologic deficiency is related to excess secretion by monocytes of prostaglandins

Radiation Carcinogenesis and DNA Alterations Frederic J. Burns, 2013-03-13 This volume is based on the proceedings of an Advanced Study Institute ASI sponsored by the North Atlantic Treaty Organization NATO held October 1984 in Corfu Greece The meeting received financial support from the United States Department of Energy and the United States National Cancer Institute A plethora of recent developments in the molecular biology of DNA are leading to new ideas concerning how DNA alterations might be involved in the mechanism of radiation carcinogenesis Evidence is accumulating that genetic sequences known as oncogenes are involved in the translation of DNA molecular alterations into phenotypic changes associated with malignant cells For example a chromosome break often occurs at or near the location of a specific oncogene in Burkitt's lymphoma Such breaks could represent initial lesions in a translocation process that activates the oncogene by inserting it at a new location eg near an active promoter Since breakage of the DNA is one of the principal ways that ionizing radiation affects mammalian cells these new molecular ideas suggest ways that radiation induced DNA breaks might be involved as initial events in carcinogenesis While the possible involvement of oncogenes in radiation carcinogenesis is an exciting new development a direct sequential connection between early molecular changes in DNA and later tumor development has yet to be established Accordingly there is a tremendous need for experimental studies of how DNA alterations might convert normal cells to cancer cells

Radiation Exposure and Occupational Risks Eberhard Scherer, Christian Streffer, Klaus-Rüdiger Trott, 2012-12-06 The aim of radiation protection standards is to make the radiation workplace as safe as is humanly possible The gradual evolution over the last 20 years has been towards a more precise definition of the limits for occupational exposure These have been created not only in terms of short term effects but also more importantly in terms of long term risks involving such problems as the potential for carcinogenesis and genetic change In the United States the National Committee for Radiation Protection has recommended that 5 rems 50 mSv should remain as the maximum permissible dose equivalent for total body exposure This would represent the sum of internal and external exposure and should be regarded as the upper limit allowed The community of radiation users is required to conduct its operations in such a manner that the absolute value of the individual's dose equivalent in rems does not exceed his age in years There should be additional limits for tissues and organs based on short term effects Therefore individual organs are limited to dose equivalents low enough to ensure that the dose threshold values are not exceeded
