Symposium Akira Katase,1998-09-29 **Radon and Thoron in the Human Environment** Tōwa Daigaku. International Symposium,1998 **Sources and Effects of Ionizing Radiation** ,2000 **Sources and Effects of Ionizing Radiation:**

Sources United Nations. Scientific Committee on the Effects of Atomic Radiation,2000 The second volume of the Scientific Committee s report adds five more annexes to the five in volume one They cover DNA repair and mutagenesis biological effects at low radiation doses combined effects of radiation and other agents epidemiological evaluation of radiation induced cancer and exposures and effects of the Chernobyl accident Each ends with an impressive number of references Annotation copyrighted by Book News Inc Portland OR **Directory of Published Proceedings** ,1999 **Naturally Occurring**

Radioactive Materials (NORM IV) ,2005 Although natural sources of radiation are not usually of regulatory concern some exposures to radon and naturally occurring radioactive materials NORM may warrant consideration as to whether controls should be applied More and more countries are regulating exposures to natural sources and the body of radiological data on such exposures is growing rapidly This international conference NORM IV is the fourth in a series dating back to 1997 and also follows on from an international symposium held in Rio de Janeiro in 1999 the proceedings of which were published as IAEA TECDOC 1271 Among the topics addressed at NORM IV were exposure to radionuclides of natural origin in mining and other industrial operations involving NORM including environmental impacts standards and regulation and measurement techniques including measurement of radon In line with the IAEA s safety related programme objective to foster information exchange this publication is aimed at disseminating important new information on exposure to natural sources to a wide spectrum of technical and regulatory personnel working in this area Chemical Abstracts Service Source Index American Chemical Society. Chemical Abstracts Service,1907 A key source to journal and conference abbreviations in the sciences Although it focuses on chemistry other scientific and engineering disciplines are also well represented In addition to the abbreviation and full title each entry also contains publishing info title changes language and frequency of publication and libraries owning that title Over 130 000 entries representing more than 70 000 publications dating back to 1907 are included

Proceedings of the International Workshop on Environmental Thoron and Related Issues, 19-22 May 2010, Chiba, Japan

International Workshop on Environmental Thoron and related Issues,2010 *Radon and thoron* National Institute of Radiological Applications,1999 *Radon in the Environment* M. Wilkening,1990-08-27 Radon was discovered in 1900 but it was not until the 1950 s that an awareness of its potential as a hazard to humans developed This resulted primarily from a recognition of the high levels of exposure for uranium miners Measurement of high concentrations of radon in homes led environmental health agencies to focus on radon as a health hazard and has resulted in concern from scientists the medical

profession and the general public It is in this context that the author undertook the writing of this book A need for a broader understanding of radon in the general environment in addition to that of indoors has become apparent Since much of the author's research has to do with outdoor radon and its decay products it seems appropriate to have a book available stressing studies on outdoor radon as well as that found indoors This book is intended to fill a gap in our knowledge of radon concentration in the outdoor atmosphere as well as to provide results of previously published indoor measurements In addition work on radon decay product ion concentrations in these environments contributes a unique set of results on effects of radon and its decay products on the electrical characteristics of the atmosphere These studies are important both from their significant contribution to human dose as well as their role in the atmospheric electrical environment

High Levels of Natural Radiation and Radon Areas Tsutomu Sugahara, 2005 Ever more attention has been focused on naturally occurring radiation thanks to the shift of public concern and scientific interest from high to low level radiation in recent years There are many places in the world that are known to have high levels of terrestrial background gamma radiation as well as highly concentrated radon and their decay products in the air soil and drinking water Various scientific investigations have been conducted in those areas to collect information on radiation doses and their health effects contributing greatly to advancing our knowledge In recent years technologically enhanced naturally occurring radioactive material TENORM has also attracted attention The 6th International Conference on High Levels of Natural Radiation and Radon Areas was held in Osaka Japan from September 6-10 2004 for the purpose of exchanging information and experience regarding investigations in this field These proceedings contain more than 100 papers presented at the meeting which aimed to discuss the following major topics 1 risk assessment radiation protection environmental transfer pathways and ecological impacts related to natural radiation and TENORM 2 dosimetry of natural radiation including radon thoron and cosmic rays and its technological aspects e g individual dosimetry and retrospective measurements and 3 in vitro and in vivo biological studies of low level radiation including molecular mechanisms Risk assessment radiation protection environmental transfer pathways and ecological impacts Dosimetry of natural radiation including radon thoron and cosmic rays and its technological aspects e g individual dosimetry and retrospective measurements In vitro and in vivo biological studies of low level radiation including molecular mechanisms

Environmental Radon C. Richard Cothorn, James E. Smith, 1987-11-30 This volume is intended for the professional who is a newcomer to the area of environmental radon It marks the first time that chapters on these subjects have been brought together in a single volume and it is arranged so that anyone with some basic university level chemistry and physics can develop a clear understanding of the different aspects involved The volume is intended to serve as a supplementary textbook in public health environmental and health physics courses It also can be used by the professional to get up to speed in this rapidly evolving field The chapters are not necessarily a discussion of the latest research in this fast moving field but are intended to bring the reader to a level at which he can easily understand the current literature At the

back of this volume the reader will find the references for the individual chapters a general list of reading materials a glossary an appendix describing the equations for radioactive decay for a series of progeny a table of often used conversion factors and the addresses and brief biographies of the authors and editors Both historical and SI International System units are used throughout the book to provide information for the widest range of readers Thanks go to Tom Hess for the idea for this volume and to Jessica Barron for help in editing
