Règles de construction

parasismique Wolfgang Jalil, 2011-07-07 Le programme des connaissances en matière de construction parasismique a fait apparaître que certains des concepts retenus dans les règles PS 69 maintenant dépassées devaient être revus. Cela a montré la nécessité de publier de nouvelles règles de manière à apporter une amélioration sensible la fiabilité des constructions. Les règles PS 92 se substituent aux règles PS 69 complétées en 1982 par un addendum tiré des témoins des séismes d'El Asnam Algérie de 1980. Depuis cette date la plupart des membres de la commission de révision des règles PS 69/82 auxquels se sont joints d'autres experts ont poursuivi leurs travaux pour tenir compte des programmes du génie parasismique et bien ficier des témoins des séismes récents tels que ceux de Mexico 1985 Spitak Arménie 1988 et Loma Californie 1989. Cet ouvragenonce les règles de conception de calcul et de vérification des projets de bâtiments soumis à l'agression sismique. Les règles viennent compléter les règles générales relatives aux différents types de construction en béton armé, en acier en bois etc. Ces règles ont pour objet de proportionner la résistance des ouvrages aux secousses qu'ils sont susceptibles de subir pour leur conférer un comportement global satisfaisant en vue d'assurer la sécurité des personnes. Elles visent également à limiter les dommages matériels. Elles n'envisagent que le cas des constructions nouvelles. Ces règles PS 92 apportent une contribution aux travaux du Comité européen de normalisation.

International Handbook of

Earthquake Engineering Mario Paz, 2012-12-06 The subject of earthquake engineering has been the focus of my teaching and research for many years. Thus when Mario Paz the editor of this handbook asked me to write a Foreword I was interested and honored by his request. Worldwide people are beginning to understand the severity of the danger to present and future generations caused by the destruction of the environment. Earthquakes pose a similar threat thus the proper use of methods for earthquake resistant design and construction is vitally important for countries that are at high risk of being subjected to strong motion earthquakes. Most seismic activity is the result of tectonic earthquakes. Tectonic earthquakes are very special events in that although they occur frequently their probability of becoming natural hazards for a specific urban area is very small. When a severe earthquake does occur near an urban area however its consequences are very large in terms of structural destruction and human suffering.

Bois Josef Kolb, 2010-01-01 La construction en bois s'est fondamentalement modernisée. Elle a gagné d'importantes parts de marché sur celles des matériaux de construction concurrents. Elle est aujourd'hui dominée par les systèmes de construction ossature en bois massif. Chaque bâtiment en bois est défini par sa structure. Il est donc essentiel de emphasize toutes les subtilités de la conception jusqu'à la mise en œuvre. Cette référence offre une approche entièrement renouvelée du sujet. Elle propose un aperçu global analytique et visuel de toutes les typologies architecturales de la maison individuelle aux programmes plus grande échelle et plusieurs étages. Les différents types d'enveloppe sont importants pour la performance énergétique ainsi que les principaux systèmes de plancher et de cloisonnement intérieurs sont présentés avec le même soin de précision. À l'aide de plans de dessins techniques et de photos cet ouvrage reflète l'état actuel et futur des techniques de construction en bois telles qu'elles sont mises en œuvre dans les pays les plus en pointe dans la maîtrise des systèmes constructifs en bois. Soutenu en France par le CNDB et en Suisse par Lignum et recommandé tous les architectes et les ingénieurs ainsi qu'aux professionnels du bâtiment.
