America Australia and Asia writes from the point of view of a political economist rather than a demographer and Economics and Demography is of particular value to students of development economics and demography within departments of economics economic history and geography *Rising China in the Changing World Economy* Liming Wang, 2012-03-12 China's rapid and sustained growth over last thirty years has propelled it to become the world's second largest economy today and potentially the largest in the foreseeable future As one of the first major economies pulling out of recession and the last remaining major socialist country in the world today China presents a challenge to established thinking on the essential primacy of global capitalism and the settled nature of the world system as China becomes more integrated into the world economy and the international system both are themselves potentially transformed as a result of China's involvement This book explores a wide range of issues connected with the impact of China on the global economy and the prevailing international system Subjects covered include China's multinationals international acquisitions the exchange rate research and development and technology transfer China's emerging major business groupings and small and medium sized enterprises **Regions in Recession and Resurgence** Michael Chisholm, 2015-03-27 The world economy has undergone rapid evolution in recent decades along with changes in the importance of industries and their organization and sharp changes in the fortunes of regions There are differences of opinion regarding the mainsprings of change and development and the role of governments in fostering national output In order to show the relevance of these changes to regional economies the book focuses on the different schools of economic thought from the neo classical through Keynesian to Marxist radical ideas and monetarist supply side thinking providing a brief description of their structure in non spatial terms The way these theories map into contrasting ideas regarding the mechanisms of regional economic growth is then explained The book concentrates on developed economies and explicitly seeks to confront theory with fact fact with theory Bringing together non spatial economic theory regional growth theory and relevant empirical data this book is intended for students in geography and regional economics but will also be of interest for those studying politics and government
