Singular Regularization of Inverse Problems Martin Benning, 2011 **Variational Source Conditions, Quadratic Inverse Problems, Sparsity Promoting Regularization** Jens Flemming, 2018-09-08 The book collects and contributes new results on the theory and practice of ill posed inverse problems Different notions of ill posedness in Banach spaces for linear and nonlinear inverse problems are discussed not only in standard settings but also in situations up to now not covered by the literature Especially ill posedness of linear operators with uncomplemented null spaces is examined Tools for convergence rate analysis of regularization methods are extended to a wider field of applicability It is shown that the tool known as variational source condition always yields convergence rate results A theory for nonlinear inverse problems with

quadratic structure is developed as well as corresponding regularization methods. The new methods are applied to a difficult inverse problem from laser optics. Sparsity promoting regularization is examined in detail from a Banach space point of view. Extensive convergence analysis reveals new insights into the behavior of Tikhonov type regularization with sparsity enforcing penalty. Regularization for Applied Inverse and Ill-Posed Problems, 2013-11-22 *Numerical Regularization for Atmospheric Inverse Problems* Adrian Doicu, Thomas Trautmann, Franz Schreier, 2010-07-16. The retrieval problems arising in atmospheric remote sensing belong to the class of the called discrete ill posed problems. These problems are unstable under data perturbations and can be solved by numerical regularization methods in which the solution is stabilized by taking additional information into account. The goal of this research monograph is to present and analyze numerical algorithms for atmospheric retrieval. The book is aimed at physicists and engineers with some background in numerical linear algebra and matrix computations. Although there are many practical details in this book for a robust and efficient implementation of all numerical algorithms, the reader should consult the literature cited. The data model adopted in our analysis is semi stochastic. From a practical point of view, there are no significant differences between a semi stochastic and a deterministic framework; the differences are relevant from a theoretical point of view, e.g. in the convergence and convergence rates analysis. After an introductory chapter providing the state of the art in passive atmospheric remote sensing, Chapter 2 introduces the concept of ill posedness for linear discrete equations. To illustrate the difficulties associated with the solution of discrete ill posed problems, we consider the temperature retrieval by nadir sounding and analyze the solvability of the discrete equation by using the singular value decomposition of the forward model matrix. **Example-based Regularization in Inverse Problems** Dmitry Datsenko, Tekhniyon, Makhon tekhnologi le-Yisra'el. Fakultah le-mad'e ha-mahshev, 2006. Regularization of Inverse Problems for Turning Processes Anna Christina Brandt, 2013-01-24. In this thesis, we will focus on inverse problems appearing in ultra precise turning processes. Ultra precision turning is widely used to manufacture metallic surfaces with high surface quality. One crucial influencing factor of the surface quality is unbalances leading to vibrations of the machine structure and interaction with the cutting process. This interaction is the so called process machine interaction. Therefore, a model is built which simulates the influence of unbalances of the machine structure and process parameters on the resulting surface of the workpiece. In order to include the process machine interaction into the model, a new force model for ultra precision turning is developed. The resulting interaction model is based on a nonlinear parameter dependent system of ordinary differential equations. The corresponding forward model is thus described by the map connecting the input parameters to the solution of this equation system. The main part of the thesis is the inversion of the forward operator, i.e. for a given tool path on the workpiece, the necessary input parameters are computed such that solving the forward model with this new input parameters results in the desired tool path. Since the forward problem is ill posed, regularization methods with sparsity constraints are applied which promote sparse solutions. The advantage of such sparse solutions is that they limit the points of machine

changes in the machine control Two different applications are treated in detail and illustrated with various numerical examples

Variational Regularization for Systems of Inverse Problems Richard Huber, 2019 Tikhonov regularization is a cornerstone technique in solving inverse problems with applications in countless scientific fields Richard Huber discusses a multi parameter Tikhonov approach for systems of inverse problems in order to take advantage of their specific structure Such an approach allows to choose the regularization weights of each subproblem individually with respect to the corresponding noise levels and degrees of ill posedness Contents General Tikhonov Regularization Specific Discrepancies Regularization Functionals Application to STEM Tomography Reconstruction Target Groups Researchers and students in the field of mathematics Experts in the areas of mathematics imaging computer vision and nanotechnology The Author Richard Huber wrote his master s thesis under the supervision of Prof Dr Kristian Bredies at the Institute for Mathematics and Scientific Computing at Graz University Austria

Linear Inverse Problems and Tikhonov Regularization Mark S. Gockenbach, 2016-12-31 Inverse problems occur frequently in science and technology whenever we need to infer causes from effects that we can measure Mathematically they are difficult problems because they are unstable small bits of noise in the measurement can completely throw off the solution Nevertheless there are methods for finding good approximate solutions Linear Inverse Problems and Tikhonov Regularization examines one such method Tikhonov regularization for linear inverse problems defined on Hilbert spaces This is a clear example of the power of applying deep mathematical theory to solve practical problems Beginning with a basic analysis of Tikhonov regularization this book introduces the singular value expansion for compact operators and uses it to explain why and how the method works Tikhonov regularization with seminorms is also analyzed which requires introducing densely defined unbounded operators and their basic properties Some of the relevant background is included in appendices making the book accessible to a wide range of readers

Inverse Problems and Spectral Theory Hiroshi Isozaki, 2004 This volume grew out of a workshop on spectral theory of differential operators and inverse problems held at the Research Institute for Mathematical Sciences Kyoto University The gathering of nearly 100 participants at the conference suggests the increasing interest in this field of research The focus of the book is on spectral theory for differential operators and related inverse problems It includes selected topics from the following areas electromagnetism elasticity the Schrodinger equation differential geometry and numerical analysis The material is suitable for graduate students and researchers interested in inverse problems and their applications

Regularization of Inverse Problems and Inexact Operator Evaluations Thomas Bonesky, 2009 This thesis contributes to the field of inverse problems with sparsity constraints In recent years this has been a rapidly developing field within the theory of inverse and ill posed problems It turned out that solutions of many inverse problems have a sparse structure which means that they can be represented using only a finite number of elements of a suitable basis or frame To reconstruct these solutions Tikhonov type regularization schemes have been investigated intensively within the last years The minimization schemes for the related

Tikhonov functionals require the evaluation of the underlying operators and their adjoints One of the main topics of this thesis is the investigation of such a minimization scheme assuming that the necessary operator evaluations are not calculated exactly but are computed via an adaptive scheme A second major part is the coupling of Morozov's discrepancy principle and Tikhonov regularization where the classical quadratic penalty term has been substituted by a more general convex functional Finally a non trivial inverse heat conduction problem from steel production is solved by a combination of iterated soft shrinkage and an adaptive finite element method Iterative Regularization Methods for Nonlinear Ill-Posed Problems

Barbara Kaltenbacher, Andreas Neubauer, Otmar Scherzer, 2008-09-25 Nonlinear inverse problems appear in many applications and typically they lead to mathematical models that are ill posed i.e. they are unstable under data perturbations Those problems require a regularization i.e. a special numerical treatment This book presents regularization schemes which are based on iteration methods e.g. nonlinear Landweber iteration level set methods multilevel methods and Newton type methods Regularization of Inverse Problems in Low-level Vision While Preserving Discontinuities David A. Regularization Theory for Ill-posed Problems Shuai Lu, Sergei V. Pereverzev, 2013 This monograph is a valuable contribution to the highly topical and extremely productive field of regularisation methods for inverse and ill posed problems The author is an internationally outstanding and accepted mathematician in this field In his book he offers a well balanced mixture of basic and innovative aspects He demonstrates new differentiated viewpoints and important examples for applications The book demonstrates the current developments in the field of regularization theory such as multiparameter regularization and regularization in learning theory The book is written for graduate and PhD students and researchers in mathematics natural sciences engineering and medicine **Convergence Rates for Variational Regularization of Inverse Problems in Exponential Families** Simayi Yusufu, 2020 We consider statistical inverse problems with statistical noise By using regularization methods one can approximate the true solution of the inverse problem by a regularized solution The previous investigation of convergence rates for variational regularization with Poisson and empirical process data is shown to be suboptimal In this thesis we obtain improved convergence rates for variational regularization methods of nonlinear ill posed inverse problems with certain stochastic noise models described by exponential families and derive better reconstruction error bounds by applying deviat
