Seiler, Eugenio Vilanova, 2012-12-06 Ultraviolet radiation a component of sunlight has been recognized by photobiologists dermatologists and oculists as a potential hazard for human health because of its genotoxic carcinogenic and immunotoxic properties Its effects on human health include the induction of skin cancers ocular damage and impairment of immunity to certain infections A few decennia ago it was demonstrated that UV photons can affect the activity of the immune system through interactions with the skin This means that UV not only changes normal cells into cancer cells but also permits the outgrowth of the UV transformed cells by depressing the immune system An intriguing question is what interactions between UV radiation and the skin initiates alterations in immune function in the exposed skin and systemically i e in other places than the exposed skin During the last 20 years many studies have been performed in order to investigate the immunosuppressive activities of UVB in laboratory animals and in human volunteers In particular effects of UVB radiation on resistance to tumours and skin associated infections have been examined In addition effects of UVB radiation on immune parameters such as contact hypersensitivity and delayed type hypersensitivity both type IV hypersensitivity reactions mixed lymphocyte reactions mixed skin lymphocyte reactions antigen presentation and numbers and function of Langerhans cells have been studied intensively The antigenicity of murine tumours which are caused by UVB radiation was one of the first items to be investigated Kripke 1974 *Effective Environmental Regulation* David P. Angel, Halina Szejnwald Brown, Patrick G. Derr, 2000-07-30 Challenging views prevalent among Western and Polish scholars this book explains Poland s surprising success in developing effective environmental and occupational regulatory systems while achieving remarkable socioeconomic growth despite the toxic legacy of the Communist era It offers rich insights into the questions of how one can achieve both economic growth and improved environmental and safety protection and of the extent to which regulatory systems can be transferred across national and cultural boundaries The authors develop a theoretical framework for assessing regulatory success then use it to analyze Poland s recent experience Grounded in five case studies of recently privatized firms the analysis also presents a new survey of privately owned firms extensive policy and data analysis and interviews with key policy leaders entrepreneurs and intellectuals The book points to case specific decision making and information richness as key dimensions of an effective regulatory system and considers in depth the extent to which

information richness is culturally dependent and hence its portability as a policy tool Addressing regulatory issues that are specific to both the United States and the international development community the book makes a significant contribution to advancing the theoretical and conceptual frameworks used to explain the success or lack of success of regulatory systems

Risk in Social Science ,2006-10-05 This book is designed as an introduction to recent social science work on risk and is intended primarily for students in sociology social psychology and psychology although it will also be useful for those studying political science government public policy and economics It is written by leading experts actively involved in research in the field The book discusses the basic issues in risk research paying attention to the contributions from different academic disciplines and reviewing debates in the recent literature It then moves on to examine work on risk across the main areas of activity discussing recent research and identifying the themes that are currently subject to debate The areas covered in substantive chapters are Crime the Environment Everyday Life Family Health Life Course Youth and Old Age Risk Regulation and Management Social Inequality covering gender ethnicity disability and social class Media Social and Public Policy as well as theoretical foundations and current issues in research New Risks: Issues and Management Louis A. Cox,Paolo F. Ricci,2013-06-29 This volume contains the proceedings of the 1986 annual meeting and conference of the Society for Risk Analysis It provides a detailed view of both mature disciplines and emerging areas within the fields of health safety and environmental risk analysis as they existed in 1986 In selecting and organizing topics for this conference we sought both i to identify and include new ideas and application areas that would be of lasting interest to risk analysts and to users of risk analysis results and ii to include innovative methods and applications in established areas of risk analysis In the three years since the conference many of the topics presented there for the first time to a broad risk analysis audience have become well developed and sometimes hotly debated areas of applied risk research Several such as the public health hazards from indoor air pollutants radon in the home high voltage electric fields and the AIDS epidemic have been the subjects of headlines since 1986 Older areas such as hazardous waste site ranking and remediation air emissions dispersion modeling and exposure assessment transportation safety seismic and nuclear risk assessment and occupational safety in the chemical industry have continued to receive new treatments and to benefit from advances in quantitative risk assessment methods as documented in the theoretical and methodological papers in this volume A theme of the meeting was the importance of new technologies and the new and uncertain risks that they create **Hazards XVIII** ,2004 Presents papers on topics safety management safe process design issues from Seveso COMAH compliance with standards transport and storage chemical reactions risk assessment and analysis human factors and behaviour **Routledge Handbook of Risk Studies** Adam Burgess,Alberto Alemanno,Jens Zinn,2016-03-31 It is over 40 years since we began to reflect upon risk in a more social than technological and economic fashion firstly making sense of the gap between expert and public assessment of risks such as to our health and environment With fixed certainties of the past eroded and the technological leaps of big data ours is truly an

age of risk uncertainty and probability from Google's algorithms to the daily management of personal lifestyle risks Academic reflection and research has kept pace with these dizzying developments but remains an intellectually fragmented field shaped by professional imperatives and disciplinary boundaries from risk analysis to regulation and social research This is the first attempt to draw together and define risk studies through a definitive collection written by the leading scholars in the field It will be an indispensable resource for the many scholars students and professionals engaging with risk but lacking a resource to draw it all together

Regulation for Chemical Safety in Europe: Analysis, Comment and Criticism D.M. Pugh,J.V. Tarazona,2013-04-17 Many European Union Directives seek to minimize the potential for harm to humans and the environment arising from the use of chemicals This book takes an interdisciplinary selective look at the effector mechanisms employed in such directives It covers the pre marketing use of toxicology to identify the hazardous properties of chemicals acknowledging its shortcomings while contrasting the scientific method with the precautionary principle in developing risk management practices The book then goes on to describe the use of bio indicators chemical analyses and mathematical modelling for prediction or to determine the adequacy of chemical safety legislation The environmental risk assessment of priority chemicals is described and the impact of pesticides on sustainability in agriculture is discussed from the differing standpoints of agronomy and economics Audience All professionals concerned with the safe management of chemicals and their use including teachers practitioners policy makers or legislators

Environmental Policy, Assessment and Communication David Canter,Martin Krampen,David Stea,2024-11-07 Originally published in 1988 reissued now with a new series introduction Environmental Policy Assessment and Communication was the second in a trilogy of books to open the series Ethnoscapes Current Challenges in the Environmental Social Sciences These three titles brought together specially commissioned contributions that cover much of the range of topics that the series as a whole would cover Although the following volumes would not have the same format the opening trilogy gave an overview of what was to come while also providing a broad base for the future authors to build upon This volume has a practical orientation Its contributions deal directly with research on those environmental matters on which government agencies and other organisations formulate policies or develop design strategies This therefore covers the assessment and evaluation of designs and design proposals as well as background research to policy issues

Risk Management of Chemicals M. L. Richardson,2014-03-14 This volume of proceedings reviews the status of risks entailed in the manufacture handling use and disposal of the chemicals on which we all depend and suggests further action for the protection of both the workplace and the natural environment

The Janus Face of Prenatal Diagnostics Eve-Marie Engels,Marianne Leuzinger-Bohleber,John Tsiantis,2019-06-06 Coping with modern technology in the life sciences biology and medicine became a major issue for people living in the Twentieth Century and continues to be so in the present century Biotechnology creates new opportunities and possibilities but also new dangers risks and ethical concerns In this volume ethical dilemmas in the context of a specific biomedical technology are discussed

Experts in ethics philosophy psychoanalysis and medicine jointly investigated a field of prenatal and genetic research that seems particularly challenging prenatal diagnostics In many European countries amniocentesis for example is a routine diagnostic tool for women becoming pregnant after the age of thirty five In recent decades enormous progress has been made in diagnosing genetically based diseases and other serious prenatal abnormalities Today we know that a positive prenatal genetic diagnostic creates distress for all women and their partners and necessitates making the difficult decision as to whether or not to allow the pregnancy to continue As is demonstrated in this volume through the summaries of interviews with couples the reactions of women and their partners who are facing this situation can be very different The new and innovative interdisciplinary dialogue on this topic that is presented in this volume offers a deeper understanding of the ethical dilemmas raised by prenatal and genetic diagnostics and explores ways to support couples in this extremely difficult situation

Risk Management Gerald Mars, David T. H. Weir, 2020-06-18 First published in 2000 Risk Management is a two volume set comprised of the most significant and influential articles by the leading authorities in the studies of risk management The volumes includes a full length introduction from the editor an internationally recognized expert and provides an authoritative guide to the selection of essays chosen and to the wider field itself The collections of essays are both international and interdisciplinary in scope and provide an entry point for investigating the myriad of study within the discipline

Communication and Social Order Niklas Luhmann, 1993 A great deal of attention has been devoted to risk research Sociologists in general have limited themselves to varying recognitions of a society at risk and have traced out the paths to disaster The detailed research has yet to be undertaken In Risk now available in paperback Niklas Luhmann develops a theoretical program for such research His premise is that the concept of risk projects essential aspects of our description of the future onto the present Risk is conceived as the possibility of triggering unexpected unlikely and detrimental consequences by means of a decision attributable to a decision maker

The Implementation and Effectiveness of International Environmental Commitments David G. Victor, Kal Raustiala, Eugene B. Skolnikoff, 1998 Because environmental problems do not respect borders their solutions often require international cooperation and agreements The contributors to this book examine how international environmental agreements are put into practice Their main concern is effectiveness the degree to which such agreements lead to changes in behavior that help to solve environmental problems Their focus is on implementation the process that turns commitments into action at both domestic and international levels Implementation is the key to effectiveness because these agreements aim to constrain not just governments but a wide array of actors including individuals firms and agencies whose behavior does not change simply because governments have made international commitments The book is divided into two parts Part I looks at international systems for implementation review through which parties share information review performance handle noncompliance and adjust commitments Part II looks at implementation at the national level with particular attention to participation by

governmental and nongovernmental actors and to problems in states with economies in transition The book includes fourteen case studies that cover eight major areas of international environmental regulation conservation and preservation of fauna and flora stratospheric ozone depletion pollution in the Baltic Sea pollution in the North Sea trade in hazardous chemicals and pesticides air pollution in Europe whaling and marine dumping of nuclear waste Contributors Steinar Andresen Juan Carlos di Primio Owen Greene Ronnie Hjorth Vladimir Kotov John Lanchbery Elena Nikitina Kal Raustiala Alexei Roginko Jon Birger Skj rseth Eugene B Skolnikoff Olav Schram Stokke David G Victor J rgen Wettestad Copublished with the International Institute for Applied Systems Analysis

Vulnerability in Technological Cultures Anique Hommels, Jessica Mesman, Wiebe E. Bijker, 2014-03-21 Novel technologies and scientific advancements offer not only opportunities but risks Technological systems are vulnerable to human error and technical malfunctioning that have far reaching consequences one flipped switch can cause a cascading power failure across a networked electric grid Yet once addressed vulnerability accompanied by coping mechanisms may yield a more flexible and resilient society This book investigates vulnerability in both its negative and positive aspects in technological cultures The contributors argue that viewing risk in terms of vulnerability offers a novel approach to understanding the risks and benefits of science and technology Such an approach broadens conventional risk analysis by connecting to issues of justice solidarity and livelihood and enabling comparisons between the global north and south The book explores case studies that range from agricultural practices in India to neonatal intensive care medicine in Western hospitals these cases spanning the issues addressed in the book illustrate what vulnerability is and does The book offers conceptual frameworks for empirical description and analysis of vulnerability that elucidate its ambiguity context dependence and constructed nature Finally the book addresses the implications of these analyses for the governance of vulnerability proposing a more reflexive way of dealing with vulnerability in technological cultures

Social Decision Methodology for Technological Projects C.A. Vlek, G. Cvetkovich, 2012-12-06 This book grew out of the conviction that the preparation and management of large scale technological projects can be substantially improved We have witnessed the often unhappy course of societal and political decision making concerning projects such as hazardous chemical installations novel types of electric power plant or storage sites for solid wastes This has led us to believe that probabilistic risk analysis technical reliability analysis and environmental impact analysis are necessary but insufficient for making acceptable and justifiable social decisions about such projects There is more to socio

technical decision making than applying acceptance rules based on negligibly low accident probabilities or on maximum credible accidents. Consideration must also be given to psychological, social and political issues and methods of decision making. Our conviction initially gave rise to an international experts workshop titled Social decision methodology for technological projects SDMTP and held in May 1986 at the University of Groningen, the Netherlands at a time when Cvetkovich spent a sabbatical there. The workshop aimed at surveying the issues and listing the methods to address them. It was the first part of an effort whose second part was directed at the production of this volume. Plans called for the book to deal systematically with the main problems of socio-technical decision making: it was to list a number of useful approaches and methods and it was to present a number of integrative conclusions and recommendations for both policy makers and methodologists.

Environmental Impact Assessment Peter Wathern, 2013-02-01 This comprehensive treatment of environmental impact assessment (EIA) provides an authoritative contemporary review of theory and practice over the past ten years. EIA is viewed as both science and art, reflecting the concern both with technical aspects of appraisal and the effects of EIA on the decision making process. Adopted in many countries with different degrees of enthusiasm since its inception in the early 1970s, EIA is established as a major procedure for assessing the environmental implications of legislation, the implementation of policy and plans, and the initiation of development projects. EIA is increasingly an essential part of environmental management.
