The Water Environment of Cities Lawrence A. Baker, 2009-04-21 The concept for the *Water Environment of Cities* arose from a workshop Green 1 Cities Blue Waters workshop held in 2006 The workshop assembled experts from engineering planning economics law hydrology aquatic ecology geomorphology and other disciplines to present research findings and identify key new ideas on the urban water environment At a lunch discussion near the end of the workshop several of us came to the recognition that despite having considerable expertise in a narrow discipline none of us had a vision of the urban water environment as a whole We were as in the parable blind men at opposite ends of the elephant knowing a great deal about the parts but not understanding the whole We quickly recognized the need to develop a book that would integrate this knowledge to create this vision The goal was to develop a book that could be used to teach a complete multidisciplinary course *The Urban Water Environment* but could also be used as a supplemental text for courses on urban ecosystems urban design landscape architecture water policy water quality management and watershed management The book is also valuable as a reference source for water professionals stepping outside their arena of disciplinary expertise *The Water Environment of Cities* is the first book to use a holistic interdisciplinary approach to examine the urban water environment We have attempted to portray a holistic vision built around the concept of water as a core element of cities Water has multiple roles municipal water supply aquatic habitat landscape aesthetics and recreation Increasingly urban water is reused serving multiple purposes
