Rulebased Programming With Ops 5:

Rule-Based Programming Thaddeus J. Kowalski, Leon S. Levy, 2012-12-06 Rule Based Programming is a broad presentation of the rule based programming method with many example programs showing the strengths of the rule based approach The rule based approach has been used extensively in the development of artificial intelligence systems such as expert systems and machine learning This rule based programming technique has been applied in such diverse fields as medical diagnostic systems insurance and banking systems as well as automated design and configuration systems Rule based programming is also helpful in bridging the semantic gap between an application and a program allowing domain specialists to understand programs and participate more closely in their development Over sixty programs are presented and all programs are available from an ftp site Many of these programs are presented in several versions allowing the reader to see how realistic programs are elaborated from back of envelope models Metaprogramming is also presented as a technique for bridging the semantic gap Rule Based Programming will be of interest to programmers systems analysts and other developers of expert systems as well as to researchers and practitioners in artificial intelligence computer science professionals and educators

and evolution **AI '88** Christopher J. Barter, Michael J. Brooks, 1990-03-07 The broad objective of this conference series is to bring business industry and researchers together to consider the current activities and future potential of artificial intelligence encompassing both practical and theoretical issues Many papers were submitted including some from Canada France UK USA Sweden Italy and Thailand Issues in Agent Communication Frank Dignum, Mark Greaves, 2006-12-31 A first attempt to develop a standardized agent communication language ACL resulted in KQML probably the most widely used such language However a lot of technical work remains to be done Even worse so far there seems to be little consensus on the basics of agent communication and there is no clear understanding of the semantics of individual speech acts or even of the basic concepts that should be used to define the semantics This book documents two workshops on communication in MAS held in 1999 one on Specifying and Implementing Conversation Policies SICP and the other in Agent Communication Languages and presents the current state of the art of research in the field A detailed introductory overview by the volume editors highlights a number of issues that play an important role in agent communication **Intelligent Systems for Engineering** Ram D. Sriram, 2012-12-06 When men of knowledge impart this knowledge I do not mean they will convince your reason I mean they will awaken in you the faith that it is so Sri Krishna Bhagavadgita BACKGROUND The use of computers has led to significant productivity increases in the engineering industry Most of the computer aided engineering applications were restricted to algorithmic computations such as finite element programs and circuit analysis programs However a number of problems encountered in engineering are not amenable to purely algorithmic solutions These problems are often ill structured the term ill structured problems is used here to denote problems that do not have a clearly defined algorithmic solution An experienced engineer deals with these ill structured problems using his/her judgment and experience The knowledge based systems KBS technology which emerged out of research in artificial intelligence AI offers a methodology to solve these ill structured engineering problems The emergence of the KBS technology can be viewed as the knowledge revolution other important events that led to increased productivity are the industrial revolution 17th century the invention of the transistor and associated developments first half of the 20th century and the world wide web towards the end of the 20th century Kurzweil in a lecture at MIT on December 3 1987 linked the progress of automation to two industrial revolutions the first industrial PREFACE xxxii revolution leveraged our physical capabilities whereas the second industrial revolution the knowledge revolution is expected leverage our mental capabilities Methods and Tools for Applied Artificial Intelligence Popovic, 1994-05-02 This work provides a comprehensive and coherent introduction to the expanding field of Artificial Intelligence AI explaining how knowledge based systems are built what tools and technologies are relevant and available and how to employ them in specific situations It pays special attention to the commercial intelligence systems that emerged in the 80s as well as projecting the likely developments of the 90s **Knowledge-Based System Diagnosis, Supervision, and Control** S.G. Tzafestas, 2013-11-22 It is in the area of Systems Diagnosis Supervision and Control that

Knowledge Based Techniques have had their most significant impact in recent years In this volume Spyros Tzafestas has ably put together the current state of the art of the application of Artificial Intelligence concepts to problems of Systems Diagnosis All the authors in this edited work are distinguished internationally recognized experts on various aspects of Artificial Intelligence and its applications and the coverage of the field that they provide is both readable and authoritative The sixteen chapters break down in a natural way into three broad categories i e a introduction to the applications of Expert Systems in Engineering b Knowledge based systems architectures models and techniques for fault diagnosis supervision and real time control and finally c applications and case studies in three specific areas namely Manufacturing Chemical Processes and Communications Networks The final chapter provides a comprehensive survey of the field with an extensive bibliography The mix of original scientific articles tutorial and survey papers makes this collection a very timely and valuable addition to the literature in this important field MADAN G SINGH Professor of Information Engineering at U M I S T **An OPS5**
