Mastering C++ Cay S. Horstmann, 1991-01-16 This book is also available through the Introductory Engineering Custom Publishing System If you are interested in creating a course pack that includes chapters from this book you can get further information by calling 212 850 6272 or sending email inquiries to engineerjwiley.com Thoroughly introduced in this timely work is the C programming language with particular emphasis on the techniques used in real life programs Requiring little prior knowledge of the C programming language and working from realistic examples *Mastering C* covers operator overloading and virtual functions as well as data pointers arrays structured types input output memory management inheritance and more Also features numerous exercises that enhance understanding of the material presented *DATA STRUCTURES IN C++* KUTTI, N. S., PADHYE, P. Y., 1998-01-01 This compact and comprehensive book provides an introduction to data structures from an object oriented perspective using the powerful language C as the programming vehicle It is designed as an ideal text for the students before they start designing algorithms in C The book begins with an overview of C then it goes on to analyze the basic concepts of data structures and finally focusses the reader's attention on abstract data structures In so doing the text uses simple examples to explain the meaning of each data type Throughout an attempt has been made to enable students to progress gradually from simple object oriented abstract data structures to more advanced data structures A large number of worked examples and the end of chapter exercises help the students reinforce the knowledge gained Intended as a one semester course for undergraduate students in computer science and for those who offer this course in engineering and management the book should also prove highly useful to those IT professionals who have a keen interest in the subject *Mastering C++* Cay S. Horstmann, 1996 Gives students the practical experience they need to master C **Inherently Parallel Algorithms in Feasibility and Optimization and their Applications** D. Butnariu, S. Reich, Y. Censor, 2001-06-18 The Haifa 2000 Workshop on Inherently Parallel Algorithms for Feasibility and Optimization and their Applications brought together top scientists in this area The objective of the Workshop was to discuss analyze and compare the latest developments in this fast growing field of applied mathematics and to identify topics of research which are of special interest for industrial applications and for further theoretical study Inherently parallel algorithms that is computational methods which are by their mathematical nature parallel have been studied in various contexts for more than fifty years However it was only during the last decade that they have mostly proved their practical usefulness because new generations of computers made their implementation possible in order to solve complex feasibility and optimization problems involving huge amounts of data via parallel processing These led to an accumulation of computational experience and theoretical information and opened new and challenging questions concerning the behavior of inherently parallel algorithms for feasibility and optimization their convergence in new environments and in circumstances in which they were not considered before their stability and reliability Several research groups all over the world focused on these questions and it

was the general feeling among scientists involved in this effort that the time has come to survey the latest progress and convey a perspective for further development and concerted scientific investigations. Thus the editors of this volume with the support of the Israeli Academy for Sciences and Humanities took the initiative of organizing a Workshop intended to bring together the leading scientists in the field. The current volume is the Proceedings of the Workshop representing the discussions, debates and communications that took place. Having all that information collected in a single book will provide mathematicians and engineers interested in the theoretical and practical aspects of the inherently parallel algorithms for feasibility and optimization with a tool for determining when, where and which algorithms in this class are fit for solving specific problems, how reliable they are, how they behave and how efficient they were in previous applications. Such a tool will allow software creators to choose ways of better implementing these methods by learning from existing experience.
