Modern General Topology Second Revised Edition:

Modern General Topology J.-I. Nagata, 1985-11-01 This classic work has been fundamentally revised to take account of recent developments in general topology The first three chapters remain unchanged except for numerous minor corrections and additional exercises but chapters IV VII and the new chapter VIII cover the rapid changes that have occurred since 1968 when the first edition appeared The reader will find many new topics in chapters IV VIII e g theory of Wallmann Shanin s compactification realcompact space various generalizations of paracompactness generalized metric spaces Dugundji type extension theory linearly ordered topological space theory of cardinal functions dyadic space etc that were in the author s opinion mostly special or isolated topics some twenty years ago but now settle down into the mainstream of general topology

Modern General Topology Jun-Iti Nagata, 2014-05-12 Bibliotheca Mathematica A Series of Monographs on Pure and Applied Mathematics Volume VII Modern General Topology focuses on the processes operations principles and approaches employed in pure and applied mathematics including spaces cardinal and ordinal numbers and mappings The publication first elaborates on set cardinal and ordinal numbers basic concepts in topological spaces and various topological spaces Discussions focus on metric space axioms of countability compact space and paracompact space normal space and fully normal space subspace product space quotient space and inverse limit space convergence mapping and open basis and neighborhood basis The book then ponders on compact spaces and related topics as well as product of compact spaces compactification extensions of the concept of compactness and compact space and the lattice of continuous functions The manuscript tackles paracompact spaces and related topics metrizable spaces and related topics and topics related to mappings Topics include metric space paracompact space and continuous mapping theory of inverse limit space theory of selection mapping space imbedding metrizability uniform space countably paracompact space and modifications of the concept of paracompactness The book is a valuable source of data for mathematicians and researchers interested in modern general topology

Recent Progress in General Topology M. Husek, J. van Mill, 1992-11-20 These papers survey the developments in General Topology and the applications of it which have taken place since the mid 1980s The book may be regarded as an update of some of the papers in the Handbook of Set Theoretic Topology eds Kunen Vaughan North Holland 1984 which gives an almost complete picture of the state of the art of Set Theoretic Topology before 1984 In the present volume several important developments are surveyed that surfaced in the period 1984 1991 This volume may also be regarded as a partial update of Open Problems in Topology eds van Mill Reed North Holland 1990 Solutions to some of the original 1100 open problems are discussed and new problems are posed

Nagata,1989-08-04 Being an advanced account of certain aspects of general topology the primary purpose of this volume is to provide the reader with an overview of recent developments The papers cover basic fields such as metrization and extension of maps as well as newly developed fields like categorical topology and topological dynamics Each chapter may be read independently of the others with a few exceptions It is assumed that the reader has some knowledge of set theory algebra analysis and basic general topology **Topology at Infinity of Discrete Groups** Ross Geoghegan,Craig R.

Guilbault,Kim Ruane,2025-02-07 This volume contains the proceedings of the AMS Special Session on Ends and Boundaries of Groups held in honor of Michael Mihalik s 70th birthday on April 15 16 2023 at the University of Cincinnati Cincinnati Ohio The papers cover current topics in geometric group theory and related topology Four survey papers discuss hyperbolic actions CAT 0 groups Thompson type groups and Z set boundaries Other papers cover new material related to hyperbolic groups Poincaré Duality groups outer automorphism groups right angled Artin groups and mapping class groups Several papers present new results on ends of spaces and related group theory A notable addition intended for readers interested in the interplay of topology and group theory is a self contained detailed exposition of Z sets and their role in geometric group theory **Aspects of Topology** Ioan Mackenzie James,E. distinguished Canadian born mathematician Hugh Dowker one of the most highly regarded topologists in the United Kingdom and sometime Professor at Birkbeck College London The volume comprises specially written articles on various topological topics by experts in many countries who worked with Dowker at one time or another These include survey expository and research articles on general topology algebraic topology and related subjects such as knot theory and graph theory The volume will be of great interest to graduate students and professional mathematicians whose speciality is topology in all its aspects **Canadian Journal of Mathematics** ,1995 *Logic Colloquium '80* D. van Dalen,T.J.

Smiley,D. Lascar,2009-06-05 The papers appearing in this volume are part of those originally intended for presentation at the conference Logic Colloquium 80 European Summer Meeting of the Association for Symbolic Logic A S L which was to takeplace in Prague August 24 30 1980 principally under the auspices of the Czech Academy of Sciences There were 36 invited speakers from Western and Eastern Europe Israel the U S and the U S S R The local organizingcommittee cabled participants on July 15 1980 to inform them that the meeting was cancelled for technical reasons a subsequent communication stated that the cancellation was due to unforeseen circumstances lying beyond the control of the organizing committee The unexpected cancellation of the Prague meeting was greatly regretted since so much care time and energy had been given to its advance preparation by the local organizing committee as well as by representatives of the A S L and its European Committee The late date on which cancellation took place required drastic changes of plans by speakers and participants Last minute efforts to reschedule the meeting elsewhere in Europe could not be realized **General Topology**

Relations to Modern Analysis and Algebra II is comprised of papers presented at the Second Symposium on General Topology and its Relations to Modern Analysis and Algebra held in Prague in September 1966. The book contains expositions and lectures that discuss various subject matters in the field of General Topology. The topics considered include the algebraic structure for a topology, the projection spectrum and its limit space, some special methods of homeomorphism theory in infinite dimensional topology, types of ultrafilters on countable sets, the compactness operator in general topology, and the algebraic generalization of the topological theorems of Bolzano and Weierstrass. This publication will be found useful by all specialists in the field of Topology and mathematicians interested in General Topology.
