Nurturing Evolution

Richard Littleton Guerrant

Nurturing Evolution:

Nurturing Evolution Richard Burnett Carter, 1993 In *Nurturing Evolution* Richard B Carter cites several fields of knowledge in order more comprehensively to argue that a human being is specifically a political animal rather than a hostile naked ape which has partially given up its solitary interests to survive in competition with other hostile naked apes Carter argues that humanness itself is in significant part a result of childhood nurture beginning at birth and that institutions of early nurture comprise social wombs i.e. true extensions of those evolutionary processes controlling fetal development within the mother's womb Carter further argues that the political creations designed to protect and nourish those social wombs are in effect also adjuncts of human evolution *Nurturing Evolution* ends by elaborating on the great dissimilarity between morally responsible human adults produced within politically nurtured families and the naked apes envisaged by other schools of political theory

Evolution of Evolution Richard Littleton Guerrant, 2018-09-30 Numerous scholarly articles and books have been written about biologic and social evolution compassion life's meaning violence and predictions of future outcomes However what is not often addressed but is increasingly desperately needed is the realization of the evolutionary survival value of caring for others This book strives to link our humanities and religious philosophies to a scientific understanding of human destiny and provide a key to meaning in our lives Though this idea has incubated for over two decades recent extremism in Charlottesville and global threats of inhumanity and violence make this more timely than ever for all who care about who we are and our children's future Furthermore our capacity for benefit or destruction of Homo sapiens or civilization as we know it sets a ticking timer on the urgency of this realization and focused action we don't have forever to get it

Banathy,2013-03-09 Based on a comprehensive review of human and societal evolution the book develops an approach to conscious self guided evolution In the course of the evolutionary journey of our species there have been three seminal events

The first happened some seven million years ago when our humanoid ancestors entered on the evolutionary scene. Their journey toward the second crucial event lasted over six million years when, as the greatest event of our evolutionary history, *Homo sapiens sapiens* started the revolutionary process of cultural evolution. Today we have arrived at the threshold of the third major event, the revolution of conscious evolution, when it becomes our responsibility to enter into the evolutionary design space and guide the evolutionary journey of our species. The book tells the story of the first six million years of the journey in just enough detail to understand how evolution had worked in times when it was primarily biological, driven by natural selection. With the human revolution, some fifty thousand years ago, with the emergence of self-reflective consciousness, the evolutionary process transformed from biological into cultural. From this point on, the book follows the journey with detailed attention in order to learn how cultural evolution works. The book is organized in three parts. Part One commences with an exposition of a brief history of the evolutionary idea through time, with a focus on a review of the science of general evolution and specifically social and societal evolution. Next, the book unfolds the evolutionary story of our species from the time when the first humanoids entered the evolutionary scene to our current era. Part Two develops a systems view of evolution, explores the ways and means of how evolution works, characterizes evolutionary consciousness, and develops the idea of conscious evolution. Part Three builds upon the knowledge developed in the first two parts and sets forth the key conditions of conscious self-guided evolution, elaborating the core condition, which is the acquisition of evolutionary competence through evolutionary learning. The focus of this part is on an approach to the design of evolutionary guidance systems that our families, neighborhoods, communities, organizations, social and societal systems can use to design the future they aspire to attain. The work is set aside from other statements in three important ways. It provides 1) a comprehensive review of how evolution has worked, with a focus on socio-cultural evolution; 2) an explanation of evolutionary consciousness and the conditions of engaging in conscious evolution; and 3) most significantly, it develops a detailed approach and a methodology to the design of evolutionary guidance systems.

The Nature and Nurturing of Collaboration

Richard L. Hayes, 2024-04-30. *Nature and the Nurturing of Collaboration* tells the wondrous story of how the natural forces of biological evolution gave way to the co-evolution of genes and a nurturing culture that gave rise to us. Several million years in the making, collaboration is the story of human cultural evolution: who we are, how we came to be this way, and how collaboration enabled humans to dominate the Earth. Through a series of genetic accidents, disruptive climatic events, and changing social conditions, humans emerged with a set of fortunate adaptations that enabled a general capacity for collaboration. Richard L. Hayes explains how these adaptations enabled them to work as members of a cultural group in acts of collective intentionality. Nurtured through the challenge and support offered by others in close social interaction, these

capacities enabled the collaborative process of adjusting behaviors and expectations in arriving at mutually determined solutions to mutually defined problems How adults can nurture these capacities in children how organizations can improve members performance and how individuals can become better collaborators are discussed in this volume How building collaborative communities has advanced our mutual understanding across cultures and ensures that collaboration serves the public good offer a tentative end to the story

The Nurture Effect Anthony Biglan, 2015-03-01 For decades behavioral scientists have investigated the role our environment plays in shaping who we are Based on groundbreaking studies this book offers a fascinating look at the evolution of behavioral science the revolutionary ways it s changing the way we live and how nurturing environments can increase people s well being in virtually every aspect of our society from early childhood education to corporate practices

Love and Hate Irenaus Eibl-Eibesfeldt, 2017-07-05 The author argues that there are specific turning points in evolution Structures and behavioral patterns that evolved in the service of discrete functions sometimes allow for unforeseen new developments as a side effect In retrospect they have proven to be pre adaptations and serve as raw material for natural selection to work upon Love and Hate was intended to complement Konrad Lorenz s book On Aggression by pointing out our motivations to provide nurturing and thus to counteract and correct the widespread but one sided opinion that biologists always present nature as bloody in tooth and claw and intra specific aggression as the prime mover of evolution This simplistic image is nonetheless still with us all the more regrettably because it hampers discussion across scholarly disciplines Eibl Eibesfeldt argues that leaders in individualized groups are chosen for their pro social abilities Those who comfort group members in distress who are able to intervene in quarrels and to protect group members who are attacked those who share those who in brief show abilities to nurture are chosen by the others as leaders rather than those who use their abilities in competitive ways Of course group leaders may need beyond their pro social competence to be gifted as orators war leaders or healers Issues of love and hate are social in origin and hence social in consequence Life has emerged on this planet in a succession of new forms from the simplest algae to man man the one being who reflects upon this creation who seeks to fashion it himself and who in the process may end by destroying it It would indeed be grotesque if the question of the meaning of life were to be solved in this way In language that is clear and accessible throughout arguing forcefully for the innate and preprogrammed dispositions of behavior in higher vertebrates including humans Eibl Eibesfeldt steers a middle course in discussing the development of cultural and ethical
