Extraterrestrial Life: Report literature; a selected listing of annotated references to unclassified scientific and technical reports, 1952-1964 United States. National Aeronautics and Space Administration,1964 **Is Earth Exceptional?** Dr. Mario Livio,Dr. Jack Szostak,2024-09-10 A New York Times bestselling astrophysicist and a Nobel laureate describe the quest to discover how and where the universe breathed life into matter For a long time scientists have wondered how life has emerged from inanimate chemistry and whether Earth is the only place where it exists Charles Darwin speculated about life on Earth beginning in a warm little pond Some of his contemporaries believed that life existed on Mars It once seemed inevitable that the truth would be known by now It is not For more than a century the origins and extent of life have remained shrouded in mystery But as Mario Livio and Jack Szostak reveal in *Is Earth Exceptional* the veil is finally lifting The authors describe how life s building blocks from RNA to amino acids and cells could have emerged from the chaos of Earth s early existence They then apply the knowledge gathered from cutting edge research across the sciences to the search for life in the cosmos both life as we know it and life as we don t Why and where life exists are two of the biggest unsolved problems in science *Is Earth Exceptional* is the ultimate exploration of the question of whether life is a freak accident or a chemical imperative **Guides to Library Collection Development** John Thomas Gillespie,Ralph J.

Folcarelli,1994-08-15 Intended to enhance collection development in school public and college libraries this volume lists and annotates approximately 1 500 significant bibliographies published from 1985 through 1993 with some earlier but still useful publications Annotations indicate scope of the work size often the number of entries kinds of material included purpose arrangement nature of entries indexes special features and a recommendation Author title and subject indexes provide easy access to the entries With its deep and comprehensive coverage this work will help not only in the process of selecting and acquiring materials for the library but also in the process of identification of items for reference readers advisory interlibrary loan and collection evaluation *Extraterrestrial Life: Published literature; a selection of annotated references to journal articles and books. 1900-1964* United States. Scientific and Technical Aerospace Reports ,1993 **Charles Darwin and The Origin of Species** Keith A.

Francis,2006-12-30 In 1859 an amateur British naturalist published a book of findings that shook the scientific community to its core and changed the structure of religion and science as we know them The product of over 20 years of research The Origin of Species challenged the popular belief that species could not evolve and argued that species can adapt to their environment and develop accordingly Although other scientists had observed some of the phenomena that Charles Darwin addressed he was the first to theorize that natural selection and later evolution were viable explanations for the origins of life The implications of Darwin s findings still reverberate today in the classroom in the courtroom and at the highest legislative levels Lively thematic chapters explore how Darwin came to the conclusions published in The Origin of Species and in later works such as The Descent of Man from his early years at Cambridge to his observations of species on the HMS Beagle voyages through the 20 years of research that culminated in Origin Also included is an insightful discussion of Darwin s impact as it is felt today from movies and popular culture to the current Intelligent Design controversy Biographies of influential figures primary source letters and selections from Origin a glossary of terms and an extensive annotated bibliography round out this accessible work **Book Review Digest** ,1996 Teaching Big History Richard B.

Simon,Mojgan Behmand,Thomas Burke,2015 Big History is a new field on a grand scale it tells the story of the universe over time through a diverse range of disciplines that spans cosmology physics chemistry astronomy geology evolutionary biology anthropology and archaeology thereby reconciling traditional human history with environmental geography and natural history Weaving the myriad threads of evidence based human knowledge into a master narrative that stretches from the beginning of the universe to the present the Big History framework helps students make sense of their studies in all disciplines by illuminating the structures that underlie the universe and the connections among them Teaching Big History is a powerful analytic and pedagogical resource and serves as a comprehensive guide for teaching Big History as well for sharing ideas about the subject and planning a curriculum around it Readers are also given helpful advice about the administrative and organizational challenges of instituting a general education program constructed around Big History The

book includes teaching materials examples and detailed sample exercises This book is also an engaging first hand account of how a group of professors built an entire Big History general education curriculum for first year students demonstrating how this thoughtful integration of disciplines exemplifies liberal education at its best and illustrating how teaching and learning this incredible story can be transformative for professors and students alike **Artificial Life** Christopher

Langton,2019-04-02 In September 1987 the first workshop on Artificial Life was held at the Los Alamos National Laboratory Jointly sponsored by the Center for Nonlinear Studies the Santa Fe Institute and Apple Computer Inc the workshop brought together 160 computer scientists biologists physicists anthropologists and other assorted ists all of whom shared a common interest in the simulation and synthesis of living systems During five intense days we saw a wide variety of models of living systems including mathematical models for the origin of life self reproducing automata computer programs using the mechanisms of Darwinian evolution to produce co adapted ecosystems simulations of flocking birds and schooling fish the growth and development of artificial plants and much much more The workshop itself grew out of my frustration with the fragmented nature of the literature on biological modeling and simulation For years I had prowled around libraries shifted through computer search results and haunted bookstores trying to get an overview of a field which I sensed existed but which did not seem to have any coherence or unity Instead I literally kept stumbling over interesting work almost by accident often published in obscure journals if published at all **Historical Dictionary of the Seventh-Day Adventists** Gary
